6	Our Communities
8	Our Planet
10	Detroit Edison – Our Electric Utility
12	Non-Utility Business Lines
14	MichCon – Our Natural Gas Utility

16	Board of Directors and Executive Committee
18	Chief Financial Officer's Letter
19	Management's Discussion and Analysis
42	Report of Management's Responsibility
43	Reports of Independent Registered Public Accounting Firm
45	Financial Statements & Notes To Consolidated Financial Statements
82	11-Year Statistical Review

**Unconventional Gas Production** primarily consists of development and production of gas from Northern Michigan's Antrim Shale, and from the Barnett Shale in Texas.

**Power & Industrial Projects** offer private, utility-like services to select energy-intensive industrial customers. On-site energy services, steel-related projects, and power generation are provided by DTE Energy Services and DTE Biomass Energy.

**Energy Trading** primarily consists of physical power and gas marketing and trading. Our customer base is predominantly utilities, local distribution companies, large industrials, and other marketing and trading companies.

**Synthetic Fuel** is produced through a process involving chemically modifying and binding particles of coal. We operate nine synfuel plants.

## DTE Energy

# Who we are

**DTE Energy** is committed to serving our customers – residential, commercial and industrial. Most of our 10,500 employees are customers too, working around the clock – on Christmas Eve, the Fourth of July, at 3 a.m. – to run our power plants, monitor our gas system and respond to emergencies. We're also giving back to the communities we serve, through philanthropy and volunteerism. Ultimately, our reason for being – our purpose – connects us to our customers and defines why we exist.

**We energize the progress of society. We make dreams real. We are always here.**

**Detroit Edison**, Michigan's largest utility, generates, distributes, purchases and sells electricity to approximately 2.2 million customers. Founded in 1903, the company uses coal, nuclear fuel, oil, natural gas and hydroelectric pumped storage to generate its electrical output. We also are exploring the use of renewable resources to generate electricity.

**MichCon** purchases, stores, transmits, sells and distributes natural gas to approximately 1.3 million residential, commercial and industrial customers in Michigan. Organized in 1898, MichCon is the 11th largest natural gas utility in the nation.

**Coal and Gas Midstream** includes DTE Coal Services, DTE Rail Services, and DTE Gas Storage, Pipelines and Processing. We provide fuel, transportation and equipment management services to customers. We also provide gas storage and manage a network of natural gas transmission pipelines and gas processing facilities.

We work for our customers

## Financial Highlights

<i>(Dollars in Millions, Except Per Share Amounts)</i>	<b>2006</b>	<b>2005</b>	<b>% Change</b>
<b>Operating Revenues</b>			
Electric Utility	\$ 4,737	\$ 4,462	6.2 %
Gas Utility	1,849	2,138	-13.5 %
Non-Utility	2,908	3,113	-6.6 %

Capital Expenditures	\$ 1,403	\$ 1,065	31.7 %
Total Assets	\$ 23,785	\$ 23,335	1.9 %

## We make positive changes

When I look back over my 13 years with the company, I realize that most of my annual letters to you have focused on our strategy, our financial results and the changing business climate in our industry. Those are vitally important issues.

Our vision is to be a leading regional utility and grow our targeted non-utility energy businesses to the next level of value creation.

Gerry Anderson, DTE Energy president and chief operating officer, and Dave Meador, our executive vice president and chief financial officer, will share more detail about our operational and financial plan in their letters that follow.

I want to share with you our renewed effort to focus on our customers and the communities in which they live and work. We're making massive changes throughout our company to become more customer-focused, more operationally nimble, more cost-efficient, and better prepared for sustainable growth. And as we grow, we're staying true to our roots as a company embedded in the communities we serve.

We understand that service means much more than keeping the lights on and the furnace running. It means doing our part to improve the quality of life for the people we serve. It helps me to put a face on those people. One of those faces is

*Tony Earley, chairman and chief executive officer, with his Cornerstone Schools partner Jeturi Emon Brown.*

Jeturi Emon Brown, a sixth grader at the Cornerstone Schools in Detroit. I've been Jeturi's partner for four years. At Cornerstone Schools, more than a thousand Detroiters partner with urban students to help them receive an education second to none. Today, Jeturi is a typical 11-year-old. Tomorrow, I want him to be so successful that he will be a Cornerstone partner and one of DTE Energy's electric or gas utility customers.

The words on the cover of our annual report describe the purpose of our company. It is a strong reminder to our shareholders, our customers and our employees of why we exist:

"We energize the progress of society. We make dreams real. We are always here."

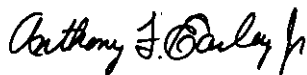

While we are neither missionaries nor nurses, ours is noble work. We heat homes in the winter and cool them in the summer. We keep classrooms and board rooms bright. We keep computers humming and cash registers ringing. We power your TV, your clothes dryer and your hair dryer. We make modern life possible. We are the foundation of progress from medicine to manufacturing and research to recreation. •

We literally power our economy.

Yet our greatest legacy – and greatest opportunity – is where it always has and always will be – with our customers.

As you read this annual report, you will get a sense of the work we are doing to serve our customers better. While we are not yet where we want to be, we are making meaningful progress and accelerating our efforts.

Thank you for your continued support.

**Anthony F. Earley Jr.**  
Chairman and Chief Executive Officer

March 1, 2007

Gerry Anderson, *DTE Energy president and chief operating officer.*

## President's Letter

Despite Michigan's troubled economy, we improved DTE Energy's financial condition considerably in 2006.

Our electric utility net income increased 17 percent and our gas utility net income increased 35 percent in 2006. Our non-utility net income decreased primarily as a result of a four-month idling in synfuel production. We had success, however, in many of our non-utility business segments including Coal and Gas Midstream and Unconventional Gas Production.

Total shareholder return (our stock price increase plus dividends) was 16 percent for the year.

In December, for the first time since 1993, we increased our annual dividend by 6 cents to \$2.12 per share. Our yield at year end was 4.3 percent, among the most attractive in our industry.

It's an exciting time to be a part of DTE Energy.

We see our strategy continuing to produce strong long-term growth.

We are confident of our plan to create significant value for our shareholders over the next five years. Our utilities are positioned to grow 5 to 6 percent per year. On the non-utility side, we are in a position to benefit from strong past investments. We plan to monetize \$800 million of our non-utility asset base in 2007 and use those proceeds to reduce debt and repurchase common stock. We repurchased one million shares of stock at year-end 2006.

*This graph indicates the performance of the company's common stock for a five-year period as compared to the "S & P 500" Index and Multi-Utilities. This is a historical representation and, as such, is not indicative of future performance relative to the indices.*

As I detail later in this letter, 2006 was a year of intense focus on improving our productivity and lowering our costs. In 2007 we will focus with equal interest on strengthening our relationships with our customers.

Companies with satisfied customers consistently have better financial results. They also have better reputations in the communities they serve. That's why across our company we're intensifying our customer focus. In 2007 we are launching a comprehensive customer satisfaction initiative with aggressive improvement goals.

Customers also tell us they want renewable energy alternatives and energy efficiency programs. I have been clear with our own employees that I want DTE Energy to be a leader in sponsoring highly effective renewables, efficiency and demand-side management programs. I believe we need solutions like these to address growing concerns around climate change. That's why I'm so pleased with the GreenCurrents<sup>sm</sup> program that we plan to launch this spring.

Once it's approved by the Michigan Public Service Commission, this program will give customers the ability to choose power created from wind, sun,

water, biomass and other environmentally friendly sources for all or part of their electricity needs. And most customers will pay just a few additional dollars a month.

What's really exciting is the domino effect this program can create. We expect GreenCurrents<sup>sm</sup> to encourage the operation and development of renewable energy generation projects in Michigan, and we'll offer long-term agreements to developers who supply the renewable energy.

It will take more than environmental initiatives to grow to our full potential. We must also improve our state's electric market structure. Specifically, it is critical that we reform the state's hybrid electric market – a structure that today is partially regulated and partially competitive. Our recent history shows that like many experiments with electric market reform, this system doesn't work well.

We must create mechanisms that allow for cost recovery of investments in energy infrastructure, new power plants and large capital expenses for utilities. This will help ensure a reliable and affordable energy supply for our customers well into the future.

As this annual report was going to press, we announced our plans to prepare for the possible construction of a new nuclear plant at our existing Fermi 2 site near Monroe. Let me be clear that we have not yet made a final decision to build. Rather, we are preserving our option to build at some point in the future by beginning the long and complex process now.

Michigan will need more power within the next 10 years. A 2006 Michigan Public Service Commission study concluded that our state will require at least one new base load power plant by 2015. As our country's focus on reducing carbon emissions intensifies, we believe that increased use of nuclear power must be part of the solution.

In addition to potentially building a new power plant, our electric utility, Detroit Edison, will invest approximately \$800 million on emissions control equipment between now and 2010. Our natural gas utility, MichCon, is expected to invest between \$150 million and \$175 million between now and 2010 to expand its delivery infrastructure, increase storage capacity, and inspect and repair 400 miles of pipeline.

At the same time we are investing in our utilities, we are improving our competitiveness. A 2006

*The Sir John Bennett Sweet Shop at Greenfield Village, The Henry Ford. Gerry Anderson is on the Board of Trustees at The Henry Ford.*

company-wide initiative to increase productivity and cut costs achieved run-rate savings of \$160 million annually by the end of 2006. Savings are expected to increase by about \$100 million in 2007, with as much as \$350 million in cost savings by 2008.

While this initiative is having a positive impact on our cost structure and processes, it also impacted our people. Nearly 900 of our friends and colleagues left the company in 2006, almost entirely through voluntary separations. Additional people will leave in 2007 as we continue to find ways to work more efficiently.

Our non-utility strategy has been very successful since its inception just over 10 years ago. Many of these asset-intensive energy businesses have grown to sufficient size and scale that we are now well positioned to realize their value. Our goal is to shape our portfolio to better match investor needs and, in the process, convert some of its inherent value into cash.

As an example, we made significant progress in developing our unconventional gas holdings in Michigan and Texas, with a 195 percent increase in proven reserves in our Barnett Shale and a 31 percent increase in proven reserves in our Antrim Shale. We plan to monetize a portion of our more mature assets while we continue to develop our less mature reserves.

We also own and operate energy-related assets for large energy-intensive customers such as auto manufacturers, steel companies and paper mills. We provide them with private, utility-like services, such as purchasing fuel, operating powerhouses, and helping them manage their energy and save money. Our plan is to sell equity partnership

interests in select projects. We continue to see good opportunities to expand this business line.

We also see good investment opportunities in our gas midstream portfolio. We see very strong demand for gas storage and transportation between Chicago and New York. We're continuing to invest in the Vector pipeline and are moving forward with the Millennium pipeline that will transport gas along this high-demand corridor. We're also expanding our gas storage capacity.

In total, the estimated proceeds from our non-utility action plan will be at least \$800 million beginning in 2007. You can read more about our growth strategy in Management's Discussion and Analysis, starting on page 19.

I will consider our efforts a success only when:

- DTE Energy is among the best operators in the industry, consistently.
- We are highly regarded by our customer base and the community.
- We are positioned to build the 21st century energy infrastructure in Michigan.
- We are viewed as smart and savvy in terms of our non-utility investments.
- We are a leader in renewable energy and energy efficiency.
- We are a consistently strong financial performer.

It's a tall order, but we are up to the challenge and making good headway.

Of course, I realize that it takes more than a good plan to succeed. It takes good people. And we have that at DTE Energy – from our leadership team to the men and women who lay our pipes and string our poles.

If you take a closer look at our company, you'll find a deeply rooted tradition of caring – for our customers and for the communities we serve.

I hope this annual report helps you get to know us better. I think you'll like what you see.

**Gerard M. Anderson**  
President and Chief Operating Officer

March 1, 2007

## We care about ideas

A bright yellow solar-powered buoy bobs in the waters of the Grand Traverse Bay. Students, sailors, sport and tribal fishermen get real-time information on wind, water temperature and currents from the Web-based buoy, one component in a five-year, \$265,000 grant awarded to Northwestern Michigan College (NMC) by the DTE Energy Foundation.

Launched following the DTE Energy Cherry Royale Parade in Traverse City, the buoy is part of a network of high-tech buoys that make up the Grand Traverse Bay Observing System. The system monitors environmental factors on Lake Michigan. Partners in the project include the University of Michigan Hydrodynamics Lab, Michigan Sea Grant and the Great Lakes Maritime Academy.

The NMC initiative, funded by the DTE Energy Foundation, helps teachers as well. Each summer, they gather with student volunteers and community organizations at the DTE Energy Freshwater Institute for Teachers. Located on the grounds of NMC, the Institute helps teachers explore ways to use freshwater studies.

"Too often," says Melanie Cypher, Interlochen Community School, "science education focuses on reciting facts without actually experiencing first hand how the world really works. The DTE Energy Freshwater Institute experience will help me instill into my

students a sense of how freshwater science influences their lives."

The Great Lakes contain nearly 90 percent of the nation's surface fresh water supply. And, every day, our nuclear and fossil fuel facilities use nearly 4 billion gallons of this water to generate electricity. Being stewards for these lakes is inseparable from who we are as a company. It's also why many of the initiatives supported through the DTE Energy Foundation's L.E.A.D. program involve our lakes and streams. Philanthropy is focused in the areas of Leadership, Education, the Environment, Achievement, Development and Diversity.

The largest corporate grant competition for non-profit organizations, the DTE Energy Foundation Achieving Excellence Awards, honored six of Michigan's top community organizations for their leadership in 2006. Energy Educator Workshops and mini-grants for educators help teachers develop students' curiosity about energy, science, math and the environment. A grant to the Conservation Resource Alliance improved 280 miles of streams in 13 watersheds and 12 counties throughout Michigan. "With Liberty and Justice for All," a permanent exhibit at The Henry Ford, looks at the progression of civil liberties in America and was partially funded through a L.E.A.D. grant. In addition to the grants given to core institutions across the state, the DTE Energy Foundation supports many other special initiatives.

In 2006, the DTE Energy Foundation awarded more than \$6.6 million, including employee-matching gifts.

*"My students are in for a treat this year. I expect them to love science as well as gain an appreciation for our freshwater resources. Thanks to the DTE Energy Freshwater Institute, each of my students can be a steward of our Great Lakes."*

"Thanks to the vision of DTE Energy, students and teachers have an opportunity to learn about fresh water."

Tim Nelson, *president, Northwestern Michigan College.*

*The Great Lakes Coastal Observing System will be used by scientists and the National Weather Service.*

"As a commercial fisherman, I depend on knowing what to expect from weather to wind direction and wave height. The buoy is a great tool for people who are interested in, or make their living from, the bay."

Bill Fowler, *Commercial Fisherman, Grand Traverse Band of Ottawa & Chippewa Indians.*

## We care about the future

"It's a new way of thinking about industrial property," says Jason Cousino, maintenance journeyman mechanic, as he spreads his arms to encompass the cardinal flowers, dogwood, native grasses and aquatic plants forming the River Rouge Power Plant's new and improved shoreline. Once a 200-foot expanse of concrete and metal bordering the Detroit River, the area now is a natural haven for birds, animals and visitors. Transformed through "softshore engineering," a technique that uses ecological principles to re-establish natural habitat, the site is a good example for other industries of what can be done up and down the river.

Up and down the rivers and throughout the communities of Michigan, DTE Energy employees, retirees and their families give time and talent to help make our planet cleaner. The Green Team, an enterprisewide environmental volunteer organization, installs and monitors bird boxes, cleans beaches and streams, and has planted hundreds of trees in partnership with the communities served by DTE Energy. Our electric utility, Detroit Edison, planted more than 20 million trees in Michigan since 1995, in a partnership with the Michigan Department of Natural Resources. That's equal to a forest the size of Flint. Planting trees removes carbon dioxide (CO<sub>2</sub>), a greenhouse gas discharged into the air. "It's good to get

my family – the next generation – involved with saving the earth," says a volunteer.

Detroit Edison committed to invest more than \$800 million over the next four years to reduce power plant emissions. Flue gas desulfurization and selected catalytic reduction equipment being installed at the Monroe Power Plant are expected to reduce emissions by nearly 95 percent.

Our new GreenCurrents<sup>SM</sup> renewable energy program will give our electric customers the option to get involved in developing power from environmentally friendly sources for just a few dollars a month. And our forest restoration projects in the lower Mississippi River valley and in the northern forests of Michigan also help to offset CO<sub>2</sub> emissions.

The Midwest Regional Carbon Sequestration Partnership is exploring carbon capture and storage, promising technology to reduce the amount of CO<sub>2</sub> reaching the atmosphere. In this project, the U.S. Department of Energy and DTE Gas and Oil will field-test the safety and effectiveness of permanently storing CO<sub>2</sub> emissions in underground rock formations 3,000 to 4,000 feet below the earth's surface. CO<sub>2</sub> injection begins in 2007.

We support these and other innovative energy solutions as part of our long-standing commitment to helping protect our environment for future generations.

*Twenty million trees can absorb 135,000 tons of carbon dioxide and produce 98,000 tons of oxygen every year.*

DTE Energy Green Team volunteers and Southgate Anderson High School "Stream Team" students spent hours moving soil and gravel to create nesting habitat for the Common Tern, a threatened bird species.

*Our properties  
provide habitat  
for more than 60  
bird species, both  
threatened and  
endangered.*

# We energize the progress of society

"I must commend the Detroit Edison crew that was dispatched to my home during a power outage. They were awesome in detecting and resolving the problem in a professional and expeditious manner."  
— A Redford Township customer.

Tree interference causes nearly two-thirds of the residential power outages that occur during storms. Maintaining a 10-foot clearance between branches and power lines reduces the possibility of these outages and helps promote customer safety. In 2006, Detroit Edison cleared more than 5,600 miles of power lines in a system that includes roughly 30,000 miles of distribution and subtransmission lines. This effort, along with capital reliability investments, helped diminish the number of average interruptions per customer down to a level that on average is in the best 10 percent of our industry. We plan to clear an additional 6,700 miles of line in 2007.

To deliver more accurate billing, Detroit Edison is investing nearly \$330 million in an Advanced Metering Infrastructure (AMI) system over the next six years. Currently, 350 meter readers monitor nearly 4 million meters monthly. With AMI, every electric meter in our system will be replaced with new technology that ensures accurate bills every month. And, when complete, AMI will provide

much more than remote meter reads. The system will monitor outages and restoration, and help us better manage our electric load.

We're helping our customers – commercial, industrial and residential – lower their energy costs too. Residential customers can get conservation tips and energy-saving ideas on [mydteenergy.com](http://mydteenergy.com). Our online Home Energy Saver audit tool helps customers calculate energy use and savings opportunities for their homes, and includes tips on saving energy when building.

The Energy Partnership and Services group offers a broad range of energy management and consulting services to businesses, saving our large commercial and industrial customers approximately \$370 million over the last 12 years. An energy audit for a museum, for instance, indicated that changing light bulbs and installing motion sensors in rooms used infrequently could reduce energy costs by almost 40 percent. In addition, we offer facility managers free energy efficiency "Lunch and Learn" seminars with useful tips on everything from boilers to buildings.

As one of the largest consulting groups to the automotive industry, Detroit Edison manages nearly \$1.8 billion in energy, steam, electricity, gas, coal and oil at manufacturing facilities throughout the U.S. Our consulting efforts helped Ford Motor Company receive the Environmental Protection Agency's Energy Star Partner of the Year award in 2006.

By clearing lines, improving reliability and educating customers, Detroit Edison is serving our commercial, industrial and residential customers better.

*"The energy use survey produced by Detroit Edison was excellent and will enable our facility to realize huge energy savings. Thank you for a job well done."*

Ron Amen, facilities manager,  
Arab American National Museum

*Poletop  
maintenance  
prevents outages on the  
electrical system. In 2006,  
the average duration of  
an outage dropped  
9 percent.*

## We make dreams real

"DTE Energy's Gas Storage, Pipelines and Processing subsidiary provides our company with flexibility and reliability. It knows how we manage our business and responds to the needs of the market."

*– Director of Trading and Optimization at a major gas and oil company.*

When a mine that supplied coal to a large paper manufacturer stopped producing, it turned to DTE Coal Services. We sourced coal from 5 mines in 3 regions to keep the customer's operation running.

DTE Energy Services' automotive business unit provides private utility-like services and energy conservation programs to automotive sites throughout the Midwest and Northeast. Our efforts save these customers millions of dollars in utility costs.

A large automotive manufacturer came to us when it was struggling with delivery and pricing of eastern coal used in its manufacturing process. Switching this customer to lower cost, lower sulfur western coal saved millions of dollars and lowered the sulfur emissions that are a byproduct of its manufacturing process.

The owner of a large domestic integrated steel mill sought out DTE Energy Services when it needed to reduce its energy costs. We are constructing a facility to supply 450,000 tons of pulverized coal

annually to the mill to inject into its blast furnace to displace higher priced coke and natural gas. The cost savings to the mill from our facility is a critical component of a major capital revitalization of the mill that will save Michigan jobs. We have large industrial customers in the steel, automotive and pulp and paper industries.

Through our 40 percent interest in the Vector pipeline, we move natural gas from Chicago through parts of Indiana and Michigan to Dawn, Ontario. Vector connects to our Washington 10 storage field, located along its route. The Millennium pipeline, slated for service in late 2008, could move gas sourced from the Vector pipeline or our Michigan storage fields, like Washington 10, through Ontario into Western New York. Then the Millennium pipeline will transport the gas to markets in New York City. We have a 26 percent interest in this pipeline.

Gas storage is another growing business. Customers move their gas to our DTE Gas Storage subsidiary facilities during summer months. We store their gas and deliver it when they need it, usually during the colder winter months.

Our unconventional gas business is engaged in natural gas exploration, development and production. In 2006, we more than doubled our Barnett Shale proven reserves and increased our Antrim Shale proven reserves by 31 percent.

By simplifying our portfolio, stabilizing earnings, converting assets into cash and expanding successful business lines, our businesses are on track to generate \$800 million in 2007.

*Our DTE Biomass Energy subsidiary extracts methane – a greenhouse gas – from 26 landfills across the country and converts it into useable electricity, steam or gas. The waste fuel from each site is generally enough to power 5,000 to 10,000 homes and businesses.*

DTE Coal and Gas Midstream marketed  
and/or transported over 45 million tons  
of coal in 2006.

*We save  
our customers  
millions of dollars  
in operating  
and energy cost.*

## We are always here

"I have the Home Protection Plus appliance repair plan for my furnace and water heater. For the past 18 months my furnace motor had been squealing, so I called the appliance repair number and a technician came to my house. Of course, when he was there, the squealing stopped, but because he was so knowledgeable, he knew that the blower motor needed replacing. The furnace operates more efficiently and the bottom line is that I'm saving energy, and saving on what it costs to heat the house. Thank you MichCon." – *From a customer e-mail.*

Our customers want quick and inexpensive appliance repairs. To address this, we restructured the appliance repair programs of both MichCon and Detroit Edison into the Home Protection Plus program. By centralizing service personnel and dedicating 45 repair technicians to appliance repairs, our employees are better trained and can provide same-day-service on most repair requests.

To promote safety for our customers and comply with the Federal Pipeline Safety Integrity Act, we're inspecting more than 400 miles of pipeline in heavily populated areas. In 2006, 44 miles of pipeline in heavily populated areas were inspected

and repaired by MichCon. A total of 175 miles of pipeline were inspected last year in our efforts to upgrade the gas infrastructure.

The volume of customers in the Grand Rapids area has been growing at approximately 1.5 percent annually. The Jamestown Pipeline will meet this swelling market demand, and when complete, will serve up to 220,000 residential customers. Three new gate stations are also being constructed to increase supply to the existing grid.

As the Grand Rapids area grows, so does MichCon. Construction at Grand Valley State University, for example, includes new dormitories and a 138,000 square foot indoor recreational facility with natural gas provided by MichCon. A new state-of-the-art hospital in Wyoming, Mich., southwest of Grand Rapids will require gas pipeline and distribution infrastructure, as will the ancillary restaurants, motels and commercial businesses being constructed to meet the needs of patients and staff. A new water park and recreational facility near Muskegon also will be serviced by MichCon.

We work with customers to help them better manage their energy costs throughout the year. A team of case management specialists assists low-income customers and others who have trouble paying their bills. We provide individual payment plans, agency referrals and follow up. Last year, DTE Energy contributed \$5.4 million to energy assistance programs. For more information on the many assistance programs available to qualified customers, visit [mydteenergy.com](http://mydteenergy.com).

*"My aunt, her neighbors and I were all impressed by the professionalism, diligence and good nature of the repair person. We all feel safer in our homes because of his hard work."*

*From a customer who called the Lynch Road Service Center on behalf of her aunt.*

MichCon plans to inspect 400 miles of pipeline over the next three to five years.

*For energy-saving  
tips and assistance  
programs available  
to qualified  
customers, visit  
[mydteenergy.com](http://mydteenergy.com)*

MichCon expects to invest as much as \$175 million between now and 2010 to expand its infrastructure, increase storage capacity and inspect and repair pipelines.

## Board of Directors

**Anthony F. Earley Jr., 57**, has been chairman of the board and chief executive officer since 1998 and was also DTE Energy's president and chief operating officer from 1994 – 2004. He joined the company in 1994, and that same year was elected to the board.

**Lillian Bauder, 67**, is a retired vice president of Masco Corporation. From 1996 to 2005, she was vice president of Corporate Affairs, Masco Corporation. She was chairman and president of the Masco Corporation Foundation from 2002 until 2005. Bauder was elected to the DTE Energy Board in 1986. (C, N)

**Allan D. Gilmour, 72**, is the retired vice chairman of Ford Motor Company. He served as vice chairman from 1992 to 1995, and then again from 2002 until his retirement from Ford Motor Company in 2005. He was elected to the DTE Energy Board in 1995. (C, F, O)

**Alfred R. Glancy III, 68**, has been the director of Unico Investment Company since 1974 and its chairman since 2000. He has been chairman, Unico Investment Group LLC since January 2007. He is the retired chairman and chief executive officer of MCN Energy Group Inc., serving from 1988 through 2001. He joined the DTE Energy Board in 2001. (F, P)

**Frank M. Hennessey, 68**, has been chairman and chief executive officer of Hennessey Capital LLC since 2002. He is the former chairman of Emco Limited and former vice chairman and chief executive officer of MascoTech Inc. He joined the DTE Energy Board in 2001. (A, O)

**John E. Lobbja, 65**, is the former chairman and chief executive officer of DTE Energy. He retired in 1998. He joined the company in 1965 and has served on the DTE Energy Board since 1988. (F, N)

**Gail J. McGovern, 55**, is a professor at the Harvard Business School. Prior to that, she was president of Fidelity Personal Investments and executive vice president of consumer markets, AT&T. She was elected to the DTE Energy Board in 2003. (F, P)

**Eugene A. Miller, 69**, is the retired chairman, president and chief executive officer, Comerica Inc. and Comerica Bank. He retired in 2002. Miller has served on the DTE Energy Board since 1989. (C, F, O)

**Charles W. Pryor, 62**, has been Chairman, Urenco Investments Inc. since January 2007 and was the president and chief executive officer of Urenco Investments Inc., from 2003 to 2006. Prior to that, he was the chief executive officer of Utility Services Business Group of BNFL and the former chief executive officer of Westinghouse Electric Company. He has served on the DTE Energy Board since 1999. (F, N)

**Josue Robles Jr., 61**, has been executive vice president, chief financial officer and corporate treasurer of the United Services Automobile Association since 1994. A retired U.S. Army Major General, Robles served over 28 years in the military, including assignments as budget director for the Pentagon and Commanding General, 1st Infantry Division, The Big Red One. He was elected to the DTE Energy Board in 2003. (A, P)

**Howard F. Sims, 73**, is the chairman and chief executive officer of the Sims Design Group and chairman of SDG Associates LLC and SDG Design Inc. He had served on the board of MCN Energy since 1988, and joined the DTE Energy Board in 2001. (C, N)

Pictured from top left are: Josue Robles, John Lobbja, Alfred Glancy, Howard Sims, Allan Gilmour, Frank Hennessey, Lillian Bauder, James Vandenberghe, Charles Pryor, Eugene Miller, Gail McGovern, and Tony Earley.

**James H. Vandenberghe, 57**, has been vice chairman and chief financial officer, Lear Corporation since 1998. He joined the DTE Energy Board in 2006. (A)

**Committee membership:** A-Audit, C-Corporate Governance, F-Finance, N-Nuclear Review, O-Organization and Compensation, P-Public Responsibility.

## Executive Committee

**Anthony F. Earley Jr., 57**, is chairman and chief executive officer of DTE Energy. He joined the company in 1994 as president and chief operating officer and that same year became a director. He was elected to his current position in 1998. Earley sits on the nonprofit boards of the Community Foundation for Southeast Michigan, Cornerstone Schools, Detroit Renaissance, Detroit Zoological Society, Henry Ford Health System and United Way of Southeastern Michigan.

**Robert J. Buckler, 57**, is president and chief operating officer (COO) of Detroit Edison, a position he has held since 2005. Buckler joined the company in 1972 and has held numerous leadership positions throughout the organization. His nonprofit board memberships include the Arab American Anti-Discrimination Committee; Detroit Economic Growth Corporation; Detroit Regional Chamber of Commerce; Detroit Regional Economic Development Partnership; Downtown Detroit Partnership; Michigan Economic Development Foundation; Rackham Foundation; University of Michigan, Engineering School, Ann Arbor and Dearborn; Next Energy and University Musical Society.

**Gerardo Norcia, 44**, is executive vice president of Michigan Consolidated Gas Company (MichCon). Norcia is responsible for all utility gas operations, and non-utility gas pipelines, processing and storage activities. He joined DTE Energy in 2002 as president of DTE Gas Storage, Pipelines and Processing. Prior to joining DTE Energy, Norcia was vice president of business development for Union Gas. His nonprofit activities include United Way of Southeastern Michigan and Oakwood Hospital.

**Paul Hillegonds, 58**, is senior vice president of corporate affairs. He joined the company in 2005 after serving as president of Detroit Renaissance since 1997. Prior to that, Hillegonds served in the Michigan House of Representatives from 1979 to 1996. During his tenure, he served as Republican leader, Co-Speaker of the House, and Speaker of the House. Among his nonprofit board memberships are Detroit Festival of the Arts; Governor's Council of Economic Advisors; Kresge Foundation; Michigan Economic Development Corp.; Michigan Future Inc.; One United Michigan; The Center for Michigan; and The Nature Conservancy-Michigan Chapter.

**Bruce D. Peterson, 50**, is senior vice president and general counsel. Prior to joining DTE Energy in 2002, he was a partner in Hunton & Williams, a national law firm specializing in energy industry matters. Peterson sits on the nonprofit boards of Cranbrook Educational Community, Cranbrook Institute of Science and the Detroit Symphony Orchestra.

**Gerard M. Anderson, 48**, is president and chief operating officer (COO) of DTE Energy. He was named president in 2004 and COO in 2005. Previously, he served as president of Energy Resources and as executive vice president of DTE Energy. Anderson joined the company in 1993. Anderson's nonprofit board memberships include Friends School, Michigan Greenways Initiative, The Nature Conservancy—Michigan Chapter, The Parade Company, The Henry Ford and New Detroit.

**David E. Meador, 49**, is executive vice president and chief financial officer (CFO), a position he has held since 2004. Meador joined DTE Energy in 1997 as vice president and controller and was elected senior vice president and CFO in 2001. Prior to joining DTE Energy, Meador served in a variety of financial and accounting positions at Chrysler Corp. Meador's nonprofit activities include Community Foundation for Southeast Michigan, The Detroit Institute of Arts, and the Society for Organizational Learning.

**Lynne Ellyn, 55**, is senior vice president and chief information officer. Ellyn joined Detroit Edison in 1998 as vice president and chief information officer after serving as vice president of business applications for Netscape Communications. Ellyn sits on the nonprofit boards of Lighthouse of Oakland County and the Michigan Women's Foundation.

**Ron May, 55**, is senior vice president, responsible for DTE2, an enterprise-wide suite of processes and technologies. He also oversees the company's environmental engineering and construction organization, responsible for major environmental construction and performance at Detroit Edison's fossil-fueled power plants. May joined the company in 1984 as director of planning and control of nuclear administration. His nonprofit board memberships include Arab Community Center for Economic & Social Services, Michigan Roundtable for Diversity and Inclusion, Oakland University and United Way 2-1-1.

**Larry E. Steward, 54**, is vice president of human resources. Prior to joining DTE Energy in 2001, Steward served as corporate vice president of human resources at Invacare Corp. He also served as deputy attorney general, bureau of consumer protection, for the Pennsylvania Department of Justice in Harrisburg, Pennsylvania. He is a member of the Pennsylvania State Bar. Steward sits on the nonprofit boards of the American Society of Employers, Detroit Youth Foundation, and the HR Policy Association.

**Sandy Ennis, 50**, is corporate secretary and chief of staff. She joined the company as a technical writer at the Fermi 2 nuclear power plant in 1985. Ennis was named corporate secretary in 2005 and chief of staff to the executive committee that same year. She came to DTE Energy from Bechtel Power Corporation in Ann Arbor, Mich. Ennis sits on the Leadership Michigan Alumni Advisory Board.

## Chief Financial Officer's Letter

# We share common ground

DTE Energy is in the midst of a transformation. Over the last several years we've worked hard to grow shareholder returns by improving our utility financial results, creating value, and strengthening our balance sheet.

Thanks to the dedication of DTE Energy's approximately 10,500 employees, we produced outstanding results in 2006. Our utilities, Detroit Edison and MichCon, improved customer reliability, continued environmental initiatives at our coal-fired power plants, reduced operating costs and introduced innovative business practices.

We invested \$329 million in 2006 to grow our three non-utility segments. Late in the year, we refocused our non-utility strategy and announced a plan to restructure business lines, including our merchant power assets. This action to our merchant power assets resulted in a one-time charge to earnings of \$49 million and is expected to improve earnings \$.07 per share going forward.

We also announced plans to monetize some of our mature non-utility businesses. This should raise more than \$800 million that will be used for stock repurchase and debt repayment. It will also create a more simple and transparent structure for our non-utility businesses. In 2007 we expect to invest up to \$400 million in our most promising business lines.

Cash flow from operations was extremely strong in 2006, at \$1.5 billion. This should continue into 2007, driven by improved operations and higher synfuel cash flow.

My commitment to growing the company while maintaining a strong balance sheet has not wavered. Likewise, we are managing the company's financial risk and maintaining an environment that promotes a system of strong internal controls.

Dave Meador, executive vice president and chief financial officer at the Detroit Institute of Arts where he serves on the board of trustees.

I am pleased that late in the year we rewarded shareholders with a 3 percent dividend increase. As our earnings grow, we will consider periodic increases.

A commitment that is not as easily traced to our company's bottom line, but one to which I am devoted, is community involvement. We can't have a strong company without strong ties to the community and I try to get involved where I can. When our communities thrive, so does our company.

Sincerely,

**David E. Meador**  
Executive Vice President and  
Chief Financial Officer

# DTE Energy Company

## Management's Discussion and Analysis of Financial Condition and Results of Operations

### Overview

DTE Energy is a diversified energy company with 2006 revenues in excess of \$9 billion and approximately \$24 billion in assets. We are the parent company of The Detroit Edison Company (Detroit Edison) and Michigan Consolidated Gas Company (MichCon), regulated electric and gas utilities engaged primarily in the business of providing electricity and natural gas sales, distribution and storage services throughout southeastern Michigan. We operate five energy-related non-utility segments with operations throughout the United States.

The following table summarizes our financial results:

(in millions, except Earnings per Share)	2006	2005	2004
Income from Continuing Operations	\$ 437	\$ 577	\$ 464
Earnings per Diluted Share	\$ 2.45	\$ 3.28	\$ 2.68
Net Income	\$ 433	\$ 537	\$ 431
Earnings per Diluted share	\$ 2.43	\$ 3.05	\$ 2.49

The decrease in 2006 net income is primarily due to the temporary idling of synfuel plants along with the associated impairments and reserves, and impairments within our Power and Industrial Projects segment. This decrease was partially offset by higher earnings at our electric utility, Detroit Edison, and Energy Trading segment mark-to-market losses in 2005 which did not recur in 2006.

The items discussed below influenced our current financial performance and may affect future results:

- Effects of weather and collectibility of accounts receivable on utility operations;
- Impact of regulatory decisions on our utility operations;
- Investments in our Unconventional Gas Production business;
- Results in our Energy Trading business;
- Synfuel-related earnings and the impact of temporarily idling synfuel facilities in 2006; and
- Cost reduction efforts and required capital investment.

### Utility Operations

**Weather** - Earnings from our utility operations are seasonal and very sensitive to weather. Electric utility earnings are primarily dependent on hot summer weather, while the gas utility's results are primarily dependent on cold winter weather. During 2006, we experienced milder than normal weather conditions.

Additionally, we occasionally experience various types of storms that damage our electric distribution infrastructure resulting in power outages. Restoration and other costs associated with storm-related power outages lowered pretax earnings by \$46 million in 2006, \$82 million in 2005 and \$48 million in 2004.

**Receivables** - Both utilities continue to experience high levels of past due receivables, especially within our gas utility operations. The increase is attributable to economic conditions, higher natural gas prices and a lack of adequate levels of assistance for low-income customers.

We have taken aggressive actions to reduce the level of past due receivables including, increased customer disconnections, contracting with collection agencies and working with the State of Michigan and others to increase the share of low-income funding allocated to our customers. In 2006, we sold previously written-off accounts of \$43 million resulting in a gain and net proceeds of \$1.9 million. The gain was recorded as a recovery through bad debt expense, which is included within Operation and maintenance expense.

As a result of these factors, our allowance for doubtful accounts expense for the two utilities increased to \$123 million in 2006 from \$98 million in 2005 and from \$105 million in 2004.

The April 2005 Michigan Public Service Commission (MPSC) gas rate order provided for an uncollectible true-up mechanism for MichCon. We filed the 2005 annual reconciliation, comparing our actual uncollectible expense to our designated revenue recovery of approximately \$37 million on an annual basis. The MPSC approved the 2005 annual reconciliation on December 21, 2006 allowing MichCon to surcharge the \$11 million excess beginning in January 2007.

We expect to file the 2006 annual reconciliation with the MPSC no later than March 31, 2007 comparing our actual 2006 uncollectible expense to our designated revenue recovery of approximately \$37 million. Ninety percent of the difference for the year will be requested to be surcharged as part of the annual reconciliation proceeding before the MPSC. We have accrued \$33 million under the 2006 uncollectible true-up mechanism.

**Regulatory activity** - In accordance with the MPSC's directive in Detroit Edison's November 2004 rate order, in March 2005, Detroit Edison filed a joint application and testimony in its 2004 Power Supply Cost Recovery (PSCR) Reconciliation Case and its 2004 Net Stranded Cost Recovery Case. In September 2006, the MPSC issued an order recognizing \$19 million of 2004 net stranded costs that required Detroit Edison to write off \$112 million of 2004 net stranded costs. The MPSC order resulted in a \$39 million reduction in the 2004 PSCR over-collection by allowing Detroit Edison to retain the benefit of third party wholesale sales required to support the electric Customer Choice program and to offset the recognition of the \$19 million of 2004 stranded costs. The MPSC order also resulted in reductions in accrued interest on the 2004 and 2005 PSCR amounts of \$15 million. The MPSC directed Detroit Edison to include the remaining 2004 PSCR over-collection amount and related interest in the 2005 PSCR Reconciliation which is in an under-collected position. The order resulted in a reduction of pre-tax income of approximately \$58 million.

The following graph depicts the total electric Customer Choice volumes for customers who have purchased power from an alternative electric supplier:

In March 2006, the MPSC issued an order directing Detroit Edison to show cause by June 1, 2006 why its retail electric rates should not be reduced in 2007. The MPSC issued an order approving the settlement agreement in this proceeding on August 31, 2006. The order provided for an annualized rate reduction of \$53 million for 2006, effective September 5, 2006. Beginning January 1, 2007, and continuing until the later of March 31, 2008 or 12 months from the filing date of Detroit Edison's next main rate case, rates will be reduced by an additional \$26 million, for a total reduction of \$79 million. Detroit Edison experienced a rate reduction of approximately \$13 million in 2006 as a result of this order. The revenue reduction is net of the recovery of the amortization of the costs associated with the implementation of the Performance Excellence Process. The settlement agreement provides for some level of realignment of the existing rate structure by allocating a larger percentage share of the rate reduction to the commercial and industrial customer classes than to the residential customer classes.

**Coal Supply** - Our generating fleet produces approximately 70% of its electricity from coal. Increasing coal demand from domestic and international markets has resulted in significant price increases. In addition, difficulty in recruiting workers, obtaining environmental permits and finding economically recoverable amounts of new coal has resulted in decreasing coal output from the central Appalachian region. Furthermore, as a result of environmental regulation and declining eastern coal stocks, demand for cleaner burning western coal has increased. This increased demand for western coal has also resulted in a corresponding demand for western rail shipping, straining railroad capacity, resulting in longer lead times for western coal shipments.

**Nuclear Fuel** - We operate one nuclear facility that undergoes a periodic refueling outage approximately every eighteen months. Uranium prices have been rising due to supply concerns. In the future, there may be additional nuclear facilities constructed in the industry that may place additional pressure on uranium supplies and prices. We have a contract with the U.S. Department of Energy (DOE) for the future storage and disposal of spent nuclear fuel from Fermi 2. We are obligated to pay the DOE a fee of 1 mill per kWh of Fermi 2 electricity generated and sold. The fee is a component of nuclear fuel expense. Delays have occurred in the DOE's program for the acceptance and disposal of spent nuclear fuel at a permanent repository. Until the DOE is able to fulfill its obligation under the contract, we are responsible for the spent nuclear fuel storage. We are currently expanding the Fermi 2 spent fuel pool capacity to meet our storage requirements through 2009. We are a party in the litigation against the DOE for both past and future costs associated

with the DOE's failure to accept spent nuclear fuel under the timetable set forth in the Federal Nuclear Waste Policy Act of 1982.

## Non-utility Operations

We have made significant investments in non-utility asset-intensive businesses. We employ disciplined investment criteria when assessing opportunities that leverage our assets, skill and expertise. Specifically, we invest in targeted energy markets with attractive competitive dynamics where meaningful scale is in alignment with our risk profile. A number of factors have impacted our non-utility businesses including the effect of oil prices on the synthetic fuel business, losses from certain power generation assets, losses from our waste coal recovery and landfill gas recovery businesses, and earnings volatility in our energy trading business. As part of a strategic review of our non-utility operations, we are considering various actions including the sale, restructuring or recapitalization of various non-utility businesses which we expect may generate over \$800 million in cash proceeds in 2007. We plan to continue to invest in focused areas that have the strongest opportunities.

The primary source of recent investment capital has been cash flow from the synfuel business. We have hedged a portion of the risk of an oil price-related phase-out of production tax credits in the synfuel business. We now anticipate approximately \$900 million of synfuel-related cash impacts from 2007 through 2009, which consists of cash from operations and proceeds from option hedges, and approximately \$500 million of tax credit carryforward utilization and other tax benefits that are expected to reduce future tax payments. Tax credit carryforward utilization in part could be extended past 2009, if taxable income is reduced from current forecasts.

## Coal and Gas Midstream

We are continuing to build our capacity to transport greater amounts of western coal and to expand into coal terminals to allow for increased coal storage and blending. We are currently involved in a contract dispute with BNSF Railway Company that has been referred to arbitration. Under this contract, BNSF transports western coal east for Detroit Edison and the Coal Transportation and Marketing business. We have filed a breach of contract claim against BNSF for the failure to provide certain services that we believe are required by the contract. The arbitration hearing is scheduled for mid-2007. While we believe we will prevail on the merits in this matter, a negative decision with respect to the significant issues being heard in the arbitration could have an adverse effect on our ability to grow the Coal Transportation and Marketing business as currently contemplated.

Pipelines, Processing and Storage is continuing its steady growth plan of expansion of storage capacity in Michigan and expanding and building new pipeline capacity to serve markets in the Midwest and northeast United States.

## Unconventional Gas Production

Current natural gas prices provide attractive opportunities for our Unconventional Gas Production business segment. We are an experienced operator with more than 15 years of experience in the Antrim shale in northern Michigan, and we continue to expand our operations in the Barnett shale basin in north Texas, where recent leasehold acquisitions have increased our total leasehold acreage

to 89,808 acres (80,530 net of interest of others) after reduction by opportunistic sales of 1,193 acres.

We are exploring the sale of a portion of our Unconventional Gas Production assets which will allow us to monetize value from our more mature holdings, while retaining the ability to benefit from the upside of our earlier stage holdings.

*Antrim shale* - We intend to develop existing acreage using the latest vertical and horizontal drilling and fracture stimulation techniques. Our long-term fixed-price obligations for production of Antrim continue to expire in 2007. This will create opportunities to remarket Antrim production at significantly higher current market rates.

	2006	2005	2004
<b>Michigan - Antrim Shale</b>			
Net Producing Wells	1,700	1,630	1,523
Production Volume (Bcfe)	22	22	23
Proved Reserves (Bcfe)	442	338	335
Net Developed Acreage	228,232	217,643	213,959
Net Undeveloped Acreage	66,184	73,056	79,025
Capital Expenditures (in Millions)	\$ 49	\$ 37	\$ 22
Future Undiscounted Net Cash Flows (in Millions) (1)	\$ 1,636	\$ 1,307	\$ 760
Average gas price with hedges (per Mcf)	\$ 3.41	\$ 3.10	\$ 3.10
Average gas price without hedges (per Mcf) (2)	\$ 6.61	\$ 7.73	\$ 5.57

(1) Represents the standardized measure of discounted future net cash flows as calculated by an independent engineering firm utilizing extensive estimates. The estimated future net cash flow computations should not be considered to represent our estimate of the expected revenues or the current value of existing proved reserves and do not include the impact of hedge contracts.

(2) The gas produced in the Antrim shale is subject to hedges that began to expire in 2006. For 2007, we anticipate remarketing an additional 1.8 Bcf.

*Barnett Shale* - We anticipate significant opportunities in our existing Barnett shale acreage and expect continued extension of producing areas within the Fort Worth Basin. We are currently in the test and development phase for unproved and recently acquired Barnett shale acreage.

	2006	2005	2004
<b>Texas - Barnett Shale</b>			
Net Producing Wells	110	55	1
Production Volume (Bcfe)	4	1	-
Proved Reserves (Bcfe)	174	59	8
Net Developed Acreage	16,045	14,637	316
Net Undeveloped Acreage	64,485	61,627	48,541
Capital Expenditures (in Millions)	\$ 137	\$ 107	\$ 16
Future Undiscounted Net Cash Flows (in Millions) (1)	\$ 472	\$ 127	\$ 7
Average gas price (per Mcf)	\$ 5.66	\$ 9.01	\$ 5.70

(1) Represents the standardized measure of discounted future net cash flows as calculated by an independent engineering firm utilizing extensive estimates. The estimated future net cash flow computations should not be considered to represent our estimate of the expected revenues or the current value of existing proved reserves and do not include the impact of hedge contracts.

Current natural gas prices and successes within the Barnett shale are resulting in more capital being invested into the region. The competition for opportunities and goods and services may result in increased operating costs. However, our experience in the Antrim shale and our experienced Barnett shale personnel provide an advantage

in addressing potential cost increases. We invested \$186 million in 2006 and expect to invest a combined amount of approximately \$150 million to \$170 million in our unconventional gas business in 2007.

As a component of our risk management strategy for our Barnett shale reserves, we hedged a portion of our proved developed producing reserves to secure an attractive investment return. As of December 31, 2006, we entered into a series of cash flow hedges for 4.7 Bcf of anticipated gas production through 2010 at an average price of \$8.08 per Mcf.

## Power and Industrial Projects

Power and Industrial Projects is comprised primarily of projects that deliver utility-type services to industrial, commercial and institutional customers, and biomass energy projects. We provide utility-type services using project assets usually located on the customers' premises in the steel, automotive, pulp and paper, airport and other industries. These services include pulverized coal and petroleum coke supply, power generation, steam production, chilled water production, wastewater treatment and compressed air supply. We own and operate three gas-fired peaking electric generating plants and a biomass-fired electric generating plant and operate one additional gas-fired power plant under contract. Additionally, we own a gas-fired peaking electric generating plant that was taken out of service in September 2006. We develop, own and operate landfill gas recovery systems throughout the United States. We produce coke from two coke batteries. The production of coke from our coke batteries generates production tax credits (assuming no phase-out).

We are exploring the combination of a sale of an equity interest in, and recapitalization of, some of the assets of the Power and Industrial Projects business, including the sale or restructuring of the power generation assets. In February 2007, we entered into an agreement to sell our Georgetown peaking electric generating facility. The sale is subject to receipt of regulatory approval and is expected to close in the second half of 2007.

## Energy Trading

Significant portions of the electric and gas marketing and trading portfolio are economically hedged. The portfolio includes financial instruments and gas inventory, as well as contracted natural gas pipelines and storage capacity positions. Most financial instruments are deemed derivatives, whereas the gas inventory, pipelines and storage assets are not derivatives. As a result, this segment may experience earnings volatility as derivatives are marked-to-market without revaluing the underlying non-derivative contracts and assets. This results in gains and losses that are recognized in different accounting periods. We may incur mark-to-market accounting gains or losses in one period that will reverse in subsequent periods when transactions are settled.

During 2005, our earnings were negatively impacted by the economically favorable decision to delay previously planned withdrawals from gas storage due to a decrease in the current price for natural gas and an increase in the forward price for natural gas. In addition, we entered into forward power contracts to economically hedge certain physical and capacity power contracts. The financial impacts of these timing differences have begun to reverse and have favorably impacted results during 2006. We are exploring strategic options for the energy trading business.

## Synthetic Fuel

### Synthetic Fuel Operations

Synfuel plants chemically change coal and waste coal into a synthetic fuel as determined under the Internal Revenue Code. Production tax credits are provided for the production and sale of solid synthetic fuel produced from coal and are available through December 31, 2007. The synthetic fuel plants generate operating losses which we expect to be offset by production tax credits. The value of a production tax credit is adjusted annually by an inflation factor and published annually by the Internal Revenue Service (IRS). The value is reduced if the Reference Price of a barrel of oil exceeds certain thresholds.

We are the operator of nine synthetic fuel production facilities throughout the United States. On May 12, 2006, we idled production at all nine of the synthetic fuel facilities. The decision to idle synfuel production was driven by the level and volatility of oil prices at that time. During the idle period, we took various steps to reduce our oil price exposure, including renegotiation of a significant number of commercial agreements. Beginning September 5, 2006 through October 4, 2006, we resumed production at each of the nine synfuel facilities due to these amended commercial agreements and declines in the level of oil prices.

### Recognition of Synfuel Gains

To optimize income and cash flow from the synfuel operations, we sold interests in all nine of the facilities, representing 91% of the total production capacity as of December 31, 2006. Proceeds from the sales are contingent upon production levels and the value of credits generated. Gains from the sale of an interest in a synfuel project are recognized when there is persuasive evidence that the sales proceeds have become fixed or determinable, the probability of refund is considered remote and collectibility is assured. In substance, we receive synfuel gains and reduced operating losses in exchange for tax credits associated with the projects sold.

The gain from the sale of synfuel facilities is generally comprised of fixed and variable components. The fixed component represents note payments, is not subject to refund, and is recognized as a gain when earned and collectibility is assured. The variable component is based on an estimate of tax credits allocated to our partners and is subject to refund based on the annual oil price phase-out. The variable component is recognized as a gain only when the probability of refund is considered remote and collectibility is assured. Additionally, our partners reimburse us (through the project entity) for the operating losses of the synfuel facilities, referred to as capital contributions. In the event that the tax credit is phased out, we are contractually obligated to refund an amount equal to all or a portion of the operating losses funded by our partners. To assess the probability and estimate the amount of refund, we use valuation and analysis models that calculate the probability of the Reference Price of oil for the year being within or exceeding the phase-out range. Due to changes in the agreements with certain of our synfuel partners and the exercise of existing rights by other synfuels partners, a higher percentage of the payments in 2006 were variable payments. As a result, a larger portion of the 2006 synfuel payments are subject to refund as a result of the phase-out; and therefore reduced the gain associated with the payments.

## Crude Oil Prices

The Reference Price of a barrel of oil is an estimate by the IRS of the annual average wellhead price per barrel for domestic crude oil. The value of the production tax credit in a given year is reduced if the Reference Price of oil over the year exceeds a threshold price and is eliminated entirely if that same Reference Price exceeds a phase-out price. During 2006, the annual average wellhead price is projected to be approximately \$6 lower than the New York Mercantile Exchange (NYMEX) price for light, sweet crude oil. The actual or estimated Reference Price and beginning and ending phase-out prices per barrel of oil for 2005 through 2007 are as follows:

	Reference Price	Beginning Phase-Out Price	Ending Phase-Out Price
2005 (actual)	\$50.26	\$53.20	\$66.79
2006 (estimated)	\$60	\$55	\$69
2007 (estimated)	Not Available	\$56	\$70

The NYMEX daily closing price of a barrel of oil for 2006 averaged approximately \$66, which is approximately equal to a Reference Price of \$60 per barrel, which we estimate to be within the phase-out range. The actual tax credit phase-out for 2006 will not be certain until the Reference Price is published by the IRS in April 2007. There is a risk of at least a partial phase-out of the production tax credits in 2007, which could adversely impact our results of operations, cash flow, and financial condition.

### Hedging of Synfuel Cash Flows

As discussed in Note 2 of the Notes to Consolidated Financial Statements, we have entered into derivative and other contracts to economically hedge a portion of our synfuel cash flow exposure to the risk of oil prices increasing. The derivative contracts are marked-to-market with changes in fair value recorded as an adjustment to synfuel gains. To manage our exposure in 2007 to the risk of an increase in oil prices that could substantially reduce or eliminate synfuel sales proceeds, we entered into a series of derivative contracts covering a specified number of barrels of oil. The derivative contracts involve purchased and written call options that provide for net cash settlement at expiration based on the full years' 2007 average NYMEX trading prices for light, sweet crude oil in relation to the strike prices of each option. If the average NYMEX prices of oil in 2007 are less than approximately \$60 per barrel, the derivatives will yield no payment. If the average NYMEX prices of oil exceed approximately \$60 per barrel, the derivatives will yield a payment equal to the excess of the average NYMEX price over these initial strike prices, multiplied by the number of barrels covered, up to a maximum price of approximately \$76 per barrel. These contracts are based on various terms to take advantage of increases in oil prices. We recorded pretax mark-to-market gains of \$60 million during 2006 and \$47 million in 2005, and a \$12 million loss in 2004. The fair value changes are recorded as adjustments to the gain from selling interests in synfuel facilities and are included in the Asset gains and losses, reserves and impairments, net line item in the Consolidated Statement of Operations. We paid approximately \$50 million for 2006 hedges, for which we received payments of approximately \$156 million upon settlement of these hedges in January 2007. Through December 31, 2006, we paid approximately \$103 million for 2007 hedges which will provide protection for a significant portion of our cash flows related to the synfuel production

during 2007. As part of our synfuel-related risk management strategy, we continue to evaluate alternatives available to mitigate unhedged exposure to oil price volatility. As our risk management position changes due to market volatility, we may adjust our hedging strategy in response to changing conditions.

### ***Risks and Exposures***

Since there was the likelihood that the Reference Price for a barrel of oil would remain above the threshold at which synfuel-related production tax credits began to phase-out, we deferred gain recognition associated with variable and certain fixed note payments in 2006 until the end of the year when the probability of refund was remote and collectibility was assured. We deferred all variable gains for the first three quarters of 2006 and 2005. We recognized \$43 million of fixed gains and \$14 million of variable gains in 2006, compared to fixed gains of \$132 million and variable gains of \$187 million in 2005. All or a portion of the deferred gains will be recognized when and if the gain recognition criteria is met. Additionally, we may establish reserves for potential refunds of amounts related to partners' capital contributions associated with operating losses allocated to their account. As previously discussed, in the event of a tax credit phase-out, we are contractually obligated to refund to our partners all or a portion of the operating losses funded by our partners.

In 2006, we recorded reserves and impairments of \$157 million, consisting of a \$79 million reserve for capital contributions related to operating losses and an impairment of \$78 million for synfuel-related fixed assets and inventory. The fixed asset impairment was partially offset by \$70 million included in the Minority Interest line on our Consolidated Statement of Operations, representing our partners' share of the asset write down.

Cash from synfuel activity is at risk of a phase-out of the production tax credits. We expect approximately \$900 million of synfuel-related cash impacts from 2007 through 2009, which consists of cash from operations, asset sales and proceeds from option hedges, and approximately \$500 million of tax credit carryforward utilization and other tax benefits that are expected to reduce future tax payments. The expected cash flow of approximately \$900 million is economically hedged against the movement in oil prices. In addition, a goodwill write-off of up to \$4 million will likely be required in 2007 due to the production tax credit phase-out, the inability to generate new production tax credits after 2007 and the resulting discontinuance of synfuel production. We have fixed note receivables associated with the sales of interests in the synfuel facilities. A partial or full phase-out of production tax credits could adversely affect the collectibility of our receivables. The cash flow impact would likely reduce our ability to execute our investment and growth strategy.

### **OPERATING SYSTEM AND PERFORMANCE EXCELLENCE PROCESS**

We continuously review and adjust our cost structure and seek improvements in our processes. Beginning in 2002, we adopted the DTE Energy Operating System, which is the application of tools and operating practices that have resulted in operating efficiencies, inventory reductions and improvements in technology systems, among other enhancements. Some of these cost reductions may be returned to our customers in the form of lower PSCR charges and the remaining amounts may impact our profitability.

As an extension of this effort, in mid-2005, we initiated a company-wide review of our operations called the Performance Excellence Process. The overarching goal has been and remains to become more competitive by reducing costs, eliminating waste and optimizing business processes while improving customer service. Many of our customers are under intense economic pressure and will benefit from our efforts to keep down our costs and their rates. Additionally, we will need significant resources in the future to invest in the infrastructure necessary to compete. Specifically, we began a series of focused improvement initiatives within our Electric and Gas Utilities, and our corporate support function.

The process is rigorous and challenging and seeks to yield sustainable performance to our customers and shareholders. We have identified the Performance Excellence Process as critical to our long-term growth strategy. Detroit Edison's costs to achieve (CTA), consisting of project management, consultant support and employee severance, is estimated to total between \$160 million and \$190 million. MichCon's CTA is estimated to total between \$55 million and \$60 million. We estimate savings of approximately \$45 million in operation and maintenance expenses and capital costs were realized in 2006. In 2006, we recorded CTA of approximately \$134 million. CTA in 2006 exceeded our savings, but we expect to realize sustained net cost savings beginning in 2007.

In September 2006, the MPSC issued an order approving a settlement agreement that allows Detroit Edison and MichCon, commencing in 2006, to defer the incremental CTA. Further, the order provides for Detroit Edison and MichCon to amortize the CTA deferrals over a ten-year period beginning with the year subsequent to the year the CTA was deferred. Detroit Edison deferred approximately \$102 million of CTA in 2006 as a regulatory asset and will begin amortizing deferred 2006 costs in 2007 as the recovery of these costs was provided for by the MPSC in the order approving the settlement in the show cause proceeding. MichCon cannot defer CTA costs at this time because a recovery mechanism has not been established.

### **CAPITAL INVESTMENT**

We anticipate significant capital investment across all of our business segments. Most of our capital expenditures will be concentrated within our utility segments. Our electric utility currently expects to invest approximately \$4.3 billion, including increased environmental requirements and reliability enhancement projects through 2011. Our gas utility currently expects to invest approximately \$1.0 billion on system expansion, pipeline safety and reliability enhancement projects through the same period. We plan to seek regulatory approval to include these capital expenditures within our regulatory rate base consistent with prior treatment.

In 2005, we launched the first phase of our Enterprise Business Systems project, an enterprise resource planning system initiative to improve existing processes and to implement new core information systems. Through December 2006, we have spent approximately \$330 million on this project and we anticipate spending an additional \$45 million to \$70 million over the next year as the remaining system elements are developed and implemented.

In the future, we may build a new base-load coal or nuclear electric generating plant. The last base-load plant constructed within our electric utility service territory was approximately twenty years ago.

## OUTLOOK

The next few years will be a period of rapid change for DTE Energy and for the energy industry. Our strong utility base, combined with our integrated non-utility operations, position us well for long-term growth. Due to the enactment of the Energy Policy Act of 2005 and the repeal of the Public Utility Holding Company Act of 1935, there are fewer barriers to mergers and acquisitions of utility companies at the federal level. However, the expected industry consolidation, resulting in the creation of large regional utility providers, has been recently impacted by actions of regulators in certain states affected by the proposed transactions.

Looking forward, we will focus on several areas that we expect will improve future performance:

- continuing to pursue regulatory stability and investment recovery for our utilities;
- managing the growth of our utility asset base;
- enhancing our cost structure across all business segments;
- improving our Electric and Gas Utility customer satisfaction; and
- investing in businesses that integrate our assets and leverage our skills and expertise.

Along with pursuing a leaner organization, we anticipate approximately \$900 million of synfuel-related cash impacts from 2007 through 2009, which consists of cash from operations and proceeds from option hedges, and approximately \$500 million of tax credit carryforward utilization and other tax benefits that are expected to reduce future tax payments. The redeployment of this cash represents a unique opportunity to increase shareholder value and strengthen our balance sheet. We expect to use any such cash and the potential cash from monetization of certain of our non-utility assets and operations to reduce debt and repurchase common stock, and to continue to pursue growth investments that meet our strict risk-return and value creation criteria. Our objectives for cash redeployment are to strengthen the balance sheet and coverage ratios to improve our current credit rating and outlook, and to have any monetizations be accretive to earnings per share.

## Results of Operations

Net income in 2006 was \$433 million, or \$2.43 per diluted share, compared to net income of \$537 million, or \$3.05 per diluted share in 2005 and net income of \$431 million, or \$2.49 per diluted share in 2004. Excluding discontinued operations and the cumulative effect of accounting changes, our income from continuing operations in 2006 was \$437 million, or \$2.45 per diluted share, compared to income of \$577 million, or \$3.28 per diluted share in 2005 and income of \$464 million, or \$2.68 per diluted share in 2004. The following sections provide a detailed discussion of our segments' operating performance and future outlook.

**Segments realigned**—In the third quarter of 2006, we realigned the non-utility segment Power and Industrial Projects business unit to separately present the Synthetic Fuel business. The impending expiration of synfuel tax credits as of December 31, 2007, combined with the sustained volatility of oil prices, increased management focus on synfuels, thereby requiring a separate business segment. In the fourth quarter of 2006, we separated the Fuel Transportation and Marketing segment into Coal and Gas Midstream, and Energy Trading corresponding to additional management focus on the results of these non-utility segments. Based on the following structure, we

set strategic goals, allocate resources and evaluate performance:

- *Electric Utility*, consisting of Detroit Edison;
- *Gas Utility*, primarily consisting of MichCon;
- *Non-utility Operations*
  - *Coal and Gas Midstream*, primarily consisting of coal transportation and marketing, gas pipelines and storage;
  - *Unconventional Gas Production*, primarily consisting of unconventional gas project development and production;
  - *Power and Industrial Projects*, primarily consisting of on-site energy services, steel-related projects and power generation with services;
  - *Energy Trading*, consisting of energy marketing and trading operations; and
  - *Synthetic Fuel*, consisting of the operations of nine synfuel plants.
- *Corporate & Other*, primarily consisting of corporate staff functions and certain energy technology investments.

<i>(in Millions, except per share data)</i>	2006	2005	2004
<b>Net Income by Segment</b>			
Electric Utility	\$ 325	\$ 277	\$ 150
Gas Utility	50	37	20
Non-utility Operations:

Net Income	\$ 2.43	\$ 3.05	\$ 2.49

The earnings per share of any segment does not represent a direct legal interest in the assets and liabilities allocated to any one segment but rather represents a direct equity interest in DTE Energy's assets and liabilities as a whole.

## Electric Utility

Our Electric Utility segment consists of Detroit Edison, which is engaged in the generation, purchase, distribution and sale of electric energy to approximately 2.2 million customers in southeastern Michigan.

**Factors impacting income:** Our net income increased \$48 million and \$127 million in 2006 and 2005, respectively. These results primarily reflect higher gross margins, partially offset by increased

depreciation and amortization expenses. Additionally, 2005 results were affected by higher rates due to the November 2004 MPSC final rate order, return of customers from the electric Customer Choice program, warmer weather and lower operations and maintenance expenses, partially offset by a portion of higher fuel and purchased power costs, which were unrecoverable as a result of residential rate caps (which expired January 1, 2006), and increased depreciation and amortization expenses.

<i>(in Millions)</i>	2006	2005	2004
Operating Revenues	\$ 4,737	\$ 4,462	\$ 3,568
Fuel and Purchased Power	1,566	1,590	885
Gross Margin	3,171	2,872	2,683
Operation and Maintenance	1,336	1,308	1,395
Depreciation and Amortization	809	640	523
Taxes Other Than Income	252	241	249
Asset (Gains) and Losses, Net	(6)	(26)	(1)
Operating Income	780	709	517
Other (Income) and Deductions	294	283	303
Income Tax Provision	161	149	64
Net Income	\$ 325	\$ 277	\$ 150
Operating Income as a Percent of Operating Revenues	16 %	16 %	14 %

Gross margin increased \$299 million during 2006 and \$189 million in 2005. The 2006 improvement was primarily due to increased rates due to the expiration of the residential rate cap on January 1, 2006 and returning sales from electric Customer Choice, partially offset by milder weather. The increase in 2005 was due to higher demand resulting from warmer weather and increased rates due to the November 2004 MPSC final rate order, partially offset by unrecovered power supply costs as a result of residential rate caps (which expired January 1, 2006) and a poor Michigan economy. Gross margin was favorably impacted by decreased electric Customer Choice penetration, whereby we lost 6% of retail sales to electric Customer Choice customers in 2006 and 12% of such sales during 2005 as retail customers migrated back to us as their electric generation provider rather than remaining with alternative suppliers. Pursuant to the MPSC final rate order, transmission expense, previously recorded in operation and maintenance expenses in 2004, is now reflected in purchased power expenses. The PSCR mechanism provides related revenues for the transmission expense.

The following table displays changes in various gross margin components relative to the comparable prior period:

<i>(in Millions)</i>	2006	2005
<b>Increase (Decrease) in Gross Margin Components Compared to Prior Year</b>		
Weather-related margin impacts	\$ (81)	\$ 166
Removal of residential rate caps effective January 1, 2006	186	-
Return of customers from electric Customer Choice	156	79
Service territory economic performance	(16)	(23)
Impact of MPSC 2004 rate orders	26	116
Unrecovered power supply costs - residential customers	-	(73)
Transmission charges	-	(93)
Other, net	28	17
Increase in gross margin performance	\$ 299	\$ 189

<i>(in Thousands of MWh)</i>	2006	2005	2004
<b>Power Generated and Purchased</b>			
Power Plant Generation			
Fossil	39,686 70 %	40,756 73 %	39,432 75 %
Nuclear	7,477 13	8,754 16	8,440 16
	47,163 83	49,510 89	47,872 91
Purchased Power	9,861 17	6,378 11	4,650 9
System Output	57,024 100 %	55,888 100 %	52,522 100 %
Less Line Loss and Internal Use	(3,603)	(3,205)	(3,574)
Net System Output	53,421	52,683	48,948
<b>Average Unit Cost (\$/MWh)</b>			
Generation (1)	\$ 15.61	\$ 15.47	\$ 12.98
Purchased Power (2)	\$ 53.71	\$ 89.37	\$ 37.06
Overall Average Unit Cost	\$ 22.20	\$ 23.90	\$ 15.11

(1) Represents fuel costs associated with power plants.

(2) The change in purchased power costs were driven primarily by seasonal demand and coal and gas prices.

<i>(in Thousands of MWh)</i>	2006	2005	2004
<b>Electric Sales</b>			
Residential	15,769	16,812	15,081
Commercial	17,948	15,618	13,425
Industrial	13,235	12,317	11,472

	50,180	47,466	42,576
Interconnection sales (1)	3,241	5,217	6,372
Total Electric Sales	53,421	52,683	48,948
<b>Electric Deliveries</b>			
Retail and Wholesale	50,180	47,466	42,576
Electric Customer Choice	2,694	6,760	9,245
Electric Customer Choice-Self Generators (2)	909	518	595
Total Electric Sales and Deliveries	53,783	54,744	52,416

(1) Represents power that is not distributed by Detroit Edison.

(2) Represents deliveries for self generators who have purchased power from alternative energy suppliers to supplement their power requirements.

Operation and maintenance expense increased \$28 million in 2006 and decreased \$87 million in 2005. The 2006 increase was primarily due to increased distribution system maintenance of \$35 million and increased plant outages of \$33 million which was partially offset by \$36 million of lower storm expenses. Pursuant to MPSC authorization, Detroit Edison deferred approximately \$102 million of CTA in 2006. The comparability of 2005 to 2004 is affected by the November 2004 MPSC final rate order which required transmission and Midwest Independent System Operator (MISO) expenses to be included in purchased power expense with related revenues to be recorded through the PSCR mechanism. Additionally, the DTE Energy parent company no longer allocated merger-related interest as a result of the November 2004 MPSC final rate order, which was partially offset by higher 2005 storm expenses.

Depreciation and amortization expense increased \$169 million and \$117 million in 2006 and 2005, respectively. The 2006 increase was due to a \$112 million net stranded cost write-off related to the September 2006 MPSC order regarding stranded costs and a \$19 million increase in our asset retirement obligation at our Fermi 1 nuclear facility. We also had increased amortization of regulatory assets of \$19 million related to electric Customer Choice and

\$8 million related to our securitized assets. The 2005 increase reflects the income effect of recording regulatory assets in 2004, which lowered depreciation and amortization expenses. The regulatory asset deferrals totaled \$46 million in 2005 and \$107 million in 2004. Additionally, higher 2005 sales volumes compared to 2004 resulted in greater amortization of regulatory assets.

*Asset (gains) and losses*, net decreased \$20 million in 2006 and increased \$25 million in 2005 primarily as a result of our 2005 sale of land near our headquarters in Detroit, Michigan.

*Other income and deductions* expense increased \$11 million in 2006 and decreased \$20 million in 2005. The 2006 increase is attributable to higher interest expense due to increased long-term debt. The 2005 decrease is due primarily to lower interest expense as a result of lower interest rates and a favorable adjustment related to tax audit settlements.

*Outlook* – We continue to improve the operating performance of Detroit Edison. During the past year, we have resolved a portion of our regulatory issues and continue to pursue additional regulatory and/or legislative solutions for structural problems within the Michigan market structure, primarily electric Customer Choice and the need to adjust rates for each customer class to reflect the full cost of service.

Concurrently, we will move forward in our efforts to continue to improve performance. Looking forward, additional issues, such as rising prices for coal, health care and higher levels of capital spending, will result in us taking meaningful action to address our costs while continuing to provide quality customer service. We will utilize the DTE Energy Operating System and the Performance Excellence Process to seek opportunities to improve productivity, remove waste and decrease our costs while improving customer satisfaction.

Long term, we will be required to invest an estimated \$2.4 billion on emission controls through 2018. Should we be able to recover these costs in future rate cases, we may experience a growth in earnings.

Additionally, our service territory may require additional generation capacity. A new base-load generating plant has not been built within the State of Michigan in the last 20 years. Should our regulatory environment be conducive to such a significant capital expenditure, we may build or expand a new base load coal or nuclear facility. While we have not decided on construction of a new base-load nuclear facility, in February 2007, we announced that we will prepare a license application for construction and operation of a new nuclear power plant on the site of Fermi 2. By completing the license application before the end of 2008, we may qualify for financial incentives under the federal Energy Policy Act of 2005. We are also studying the possible transfer of a gas-fired peaking electric generating plant from our non-utility operations to our electric utility to support future power generation requirements.

The following variables, either in combination or acting alone, could impact our future results:

- amount and timing of cost recovery allowed as a result of regulatory proceedings, related appeals, or new legislation;
- our ability to reduce costs and maximize plant performance;
- variations in market prices of power, coal and gas;
- economic conditions within the State of Michigan;

- weather, including the severity and frequency of storms; and
- levels of customer participation in the electric Customer Choice program.

We expect cash flows and operating performance will continue to be at risk due to the electric Customer Choice program until the issues associated with this program are adequately addressed. We will accrue as regulatory assets any future unrecovered generation-related fixed costs (stranded costs) due to electric Customer Choice that we believe are recoverable under Michigan legislation and MPSC orders. We cannot predict the outcome of these matters. See Note 6 of the Notes to Consolidated Financial Statements.

In January 2007, the MPSC submitted the State of Michigan's 21st Century Energy Plan to the Governor of Michigan. The plan recommends that Michigan's future energy needs be met through a combination of renewable resources and cleanest generating technology, with significant energy savings achieved by increased energy efficiency. The plan also recommends:

- a requirement that all retail electric suppliers obtain at least 10 percent of their energy supplies from renewable resources by 2015;
- an opportunity for utility-built generation, contingent upon the granting of a certificate of need and competitive bidding of engineering, procurement and construction services;
- investigating the cost of a requirement to bury certain power lines; and
- creation of a Michigan Energy Efficiency Program, administered by a third party under the direction of the MPSC with initial funding estimated at \$68 million.

We continue to review the energy plan and are unable to predict the impact on the Company of the implementation of the plan.

## Gas Utility

Our Gas Utility segment consists of MichCon and Citizens Fuel Gas Company (Citizens), natural gas utilities subject to regulation by the MPSC. MichCon is engaged in the purchase, storage, transmission, distribution and sale of natural gas to approximately 1.3 million residential, commercial and industrial customers in the State of Michigan. MichCon also has subsidiaries involved in the gathering and transmission of natural gas in northern Michigan. MichCon operates one of the largest natural gas distribution and transmission systems in the United States. Citizens distributes natural gas in Adrian, Michigan to approximately 17,000 customers.

*Factors impacting income:* Gas Utility's net income increased \$13 million in 2006 and increased \$17 million in 2005. The variances were primarily attributable to increased rates and the impacts in 2005 of the MPSC's April 2005 gas cost recovery and gas rate orders and the effect of milder weather in 2006.

The 2005 MPSC gas rate order disallowed recovery of 90% of the costs of a computer billing system that was in place prior to DTE Energy's acquisition of MCN Energy in 2001. MichCon impaired this asset by approximately \$42 million in the first quarter of 2005. This disallowance was not reflected at the DTE Energy level since this impairment was previously reserved at the time of the MCN acquisition in 2001.

<i>(in Millions)</i>	2006	2005	2004
Operating Revenues	\$ 1,849	\$ 2,138	\$ 1,682
Cost of Gas	1,157	1,490	1,071
Gross Margin	692	648	611
Operation and Maintenance	431	424	403
Depreciation and Amortization	94	95	103
Taxes Other Than Income	53	43	49
Asset (Gains) and Losses, Net	-	4	(3)
Operating Income	114	82	59
Other (Income) and Deductions	53	47	48
Income Tax Provision (Benefit)	11	(2)	(9)
Net Income	\$ 50	\$ 37	\$ 20
Operating Income as a Percent of Operating Revenues	6 %	4 %	4%

Gross margin increased \$44 million and \$37 million in 2006 and 2005, respectively. Gross margins were favorably affected by higher base rate revenues of \$15 million and \$42 million in 2006 and 2005, respectively. Revenue associated with the uncollectible expense tracking mechanism authorized by the MPSC in the April 2005 gas rate order, increased \$22 million and \$11 million in 2006 and 2005, respectively. Additionally, 2006 was impacted by a \$17 million favorable impact in lost gas recognized and an increase of \$24 million in midstream services including storage and transportation. Partially offsetting these increases were declines of \$31 million due to warmer than normal weather and \$26 million as a result of customer conservation and lower volumes. The comparability of 2006 to 2005 is also affected by an adjustment we recorded in the first quarter of 2005 related to an April 2005 MPSC order in our 2002 Gas Cost Recovery (GCR) reconciliation case that disallowed \$26 million representing unbilled revenues at December 2001.

	2006	2005	2004
<b>Gas Markets (in Millions)</b>			
Gas sales	\$ 1,541	\$ 1,860	\$ 1,435
End user transportation	135	134	119
	1,676	1,994	1,554
Intermediate transportation	69	58	56
Other	104	86	72
	\$ 1,849	\$ 2,138	\$ 1,682
<b>Gas Markets (in Bcf)</b>			
Gas sales	138	168	173
End user transportation	136	157	145
	274	325	318
Intermediate transportation	373	432	536
	647	757	854

The 2005 final rate order provided revenue for an uncollectible expense true-up mechanism (UETM) to mitigate the effect of increasing uncollectible expense. The revenue recorded related to the UETM was \$33 million for 2006 and \$11 million for 2005.

**Uncollectible Accounts Expense**  
(in millions)

Operation and maintenance expense increased \$7 million and \$21 million in 2006 and 2005, respectively. The 2006 increase is due to a \$14 million increase in uncollectible accounts receivable expense, reflecting higher past due amounts attributable to an increase in gas prices, continued weak economic conditions, and inadequate government-sponsored assistance for low-income customers. In 2006, we recorded \$24 million in implementation costs associated with our Performance Excellence Process and we recognized \$9 million of lower injuries and damages expenses and lower labor and employee incentives. The comparability of 2006 to 2005 and the comparability of 2005 to 2004 was affected by an adjustment we recorded in the second quarter of 2005 for the disallowance of \$11 million in environmental costs due to the April 2005 final gas rate order and the requirement to defer negative pension expense as a regulatory liability. Additionally, the comparability was impacted by the DTE Energy parent company no longer allocating \$9 million of merger-related interest to MichCon effective in April 2005.

Asset (gains) and losses, net increased \$4 million and decreased \$7 million in 2006 and 2005, respectively. The 2006 change was due to a \$3 million gain on the sale of investment rights related to storage field construction which was offset by a \$3 million loss due to a reduction to MichCon's 2004 GCR underrecovery related to the accounting treatment of the injected base gas remaining in the New Haven storage field when it was sold in early 2004. The \$7 million decline in 2005 was primarily the result of a write-off of certain computer equipment and related depreciation resulting from the April 2005 final rate order.

Income tax provision increased by \$13 million in 2006 and income tax benefit decreased \$7 million in 2005 primarily due to variations in pre-tax earnings.

**Outlook** – Operating results are expected to vary due to regulatory proceedings, weather, changes in economic conditions, customer conservation and process improvements. Higher gas prices and economic conditions have resulted in continued pressure on receivables and working capital requirements that are partially mitigated by the GCR mechanism. In the April 2005 final gas rate order, the MPSC adopted MichCon's proposed tracking mechanism for uncollectible accounts receivable. Each year, MichCon will file an application comparing its actual uncollectible expense for the prior calendar year to its designated revenue recovery of approximately \$37 million. Ninety percent of the difference will be refunded or surcharged after an annual reconciliation proceeding before the MPSC.

We will utilize the DTE Energy Operating System and the Performance Excellence Process to seek opportunities to improve productivity, remove waste and decrease our costs while improving customer satisfaction.

## NON-UTILITY OPERATIONS

### Coal and Gas Midstream

Coal and Gas Midstream consists of Coal Transportation and Marketing and the Pipelines, Processing and Storage businesses.

Coal Transportation and Marketing provides fuel, transportation and rail equipment management services. We specialize in

minimizing fuel costs and maximizing reliability of supply for energy-intensive customers. Additionally, we participate in coal marketing and coal-to-power tolling transactions, as well as the purchase and sale of emissions credits. We perform coal mine methane extraction, in which we recover methane gas from mine voids for processing and delivery to natural gas pipelines, industrial users, or for small power generation projects.

Pipelines, Processing and Storage owns a partnership interest in an interstate transmission pipeline, six carbon dioxide processing facilities and two natural gas storage fields. The pipeline and storage assets are primarily supported by stable, long-term fixed price revenue contracts. The assets of these businesses are well integrated with other DTE Energy operations. Pursuant to an operating agreement, MichCon provides physical operations, maintenance and technical support for the Washington 28 and Washington 10 storage facilities.

*Factors impacting income:* Net income increased \$5 million and \$12 million in 2006 and 2005, respectively.

<i>(in Millions)</i>	2006	2005	2004
Operating Revenues	\$ 707	\$ 707	\$ 589
Operation and Maintenance	628	653	542
Depreciation and Amortization	4	3	3
Taxes Other Than Income	5	4	4
Operating Income	70	47	40
Other (Income) and Deductions	(8)	(20)	(12)
Income Tax Provision	28	22	19
Net Income	\$ 50	\$ 45	\$ 33

*Operating revenues* remained the same in 2006 and increased \$118 million in 2005. In 2006, our Coal Transportation and Marketing business experienced lower synfuel related volumes, which were offset by an increase in storage revenues in the Pipelines, Processing and Storage business. During 2005, our Coal Transportation and Marketing business experienced higher throughput volumes and increased prices for coal.

*Operation and maintenance expense* decreased \$25 million in 2006 and increased \$111 million in 2005. The 2006 decrease was due to lower synfuel related volumes and decreased expenses at our Coal Transportation and Marketing business due to decreased marketing volume. During 2005, our Coal Transportation and Marketing business experienced higher throughput volumes and increased prices for coal.

*Other income and deductions* decreased \$12 million in 2006 and increased \$8 million in 2005. The 2006 decrease is primarily attributed to higher interest expense as a result of our storage expansion construction.

*Income tax provision* increased \$6 million for 2006 and increased \$3 million in 2005 reflecting variations in pre-tax income.

*Outlook* – We expect to continue to grow our Coal Transportation and Marketing business in a manner consistent with, and complementary to, the growth of our other business segments. However, a portion of our Coal Transportation and Marketing revenues and net income are dependent upon our Synfuel

operations and were adversely impacted by the temporary idling of the synfuel facilities in 2006. Coal Transportation and Marketing is involved in a contract dispute with BNSF Railway Company that has been referred to arbitration. See Note 15 of the Notes to Consolidated Financial Statements.

Our Pipeline, Processing and Storage business will continue its steady growth plan. In April 2006, Pipelines, Processing and Storage placed into service over 14 Bcf of storage capacity at an existing Michigan storage field and plans to file a MPSC application early in 2007 for a new gas storage reservoir which will increase its overall working gas storage capacity by 8.0 Bcf to a total of 74 Bcf. In December 2006, Washington 28 filed an application with the MPSC requesting an increase in its working gas storage capacity to 16.0 Bcf. Vector Pipeline has secured long-term market commitments to support an expansion project, for approximately 200 MMcf per day, with a projected in-service date of November 2007. Vector Pipeline received Federal Energy Regulatory Commission (FERC) approval for this expansion in October 2006. Pipeline, Processing and Storage has a 26.25% ownership interest in Millennium Pipeline which received FERC approval for construction and operation in December 2006. Millennium Pipeline is scheduled to be in service in late 2008. In October 2006, we purchased the lessor interest in the 66 Bcf Washington 10 gas storage field. Prior to the purchase, we leased the storage rights and lease obligations were recorded as operating leases. We plan to expand existing assets and develop new assets which are typically supported with long-term customer commitments.

#### Unconventional Gas Production

Unconventional Gas Production is primarily engaged in natural gas exploration, development and production. Our Unconventional Gas Production business produces gas from the Antrim and Barnett shales and sells most of the gas to the Energy Trading segment.

*Factors impacting income:* Net income increased \$5 million in 2006 and decreased \$2 million in 2005. The 2006 results were primarily impacted by an increase in Barnett shale production and an increase in net gas prices for Antrim shale. Partially offsetting these revenue increases were higher operating and depletion expenses associated with increased production and the operation of new wells. The decline in 2005 was due to higher operating and Michigan severance tax expenses.

<i>(in Millions)</i>	2006	2005	2004
Operating Revenues	\$ 99	\$ 74	\$ 71
Operation and Maintenance	37	30	27
Depreciation, Depletion and Amortization	27	20	18
Taxes Other Than Income	11	11	7
Asset (Gains) and Losses, Net	(3)	-	-
Operating Income	27	13	19
Other (Income) and Deductions	13	8	10
Income Tax Provision	5	1	3
Net Income	\$ 9	\$ 4	\$ 6

*Operating revenues* increased \$25 million in 2006 due to increased Barnett shale production and increased \$3 million in 2005 due primarily to higher gas prices.

Operations and maintenance expense increased \$7 million in 2006 and \$3 million in 2005. Increases are associated with the addition of approximately 285 net producing wells during the three-year period.

Depreciation, depletion and amortization increased \$7 million in 2006 and \$2 million in 2005. The year-to-year increases were associated with higher gas production and higher finding costs associated with Barnett shale wells.

Taxes other than income were the same in 2006 due to severance taxes that were impacted by lower gas prices, which was offset by higher gas production, and increased \$4 million in 2005 due to higher severance taxes associated with gas price increases on relatively flat Antrim gas volumes.

Assets (gains) and losses, net increased \$3 million in 2006 primarily due to the sale of a working interest in unproved property.

Other income and deductions increased \$5 million in 2006 and decreased \$2 million in 2005. Interest expense was the primary contributor to the variances. The 2006 increase in interest expense was attributed to higher average affiliate notes payable balances.

**Outlook** – We expect to continue to develop our proved areas and test unproved areas in Michigan and Texas. Evaluation of Barnett shale test wells in up to three new areas is ongoing. During 2007, we expect Barnett Shale production of 8.7 Bcfe of natural gas compared with approximately 4.1 Bcfe in 2006 and Antrim Shale production roughly equivalent to the 21.5 Bcfe produced in 2006. We expect to invest a combined amount of approximately \$150 million to \$170 million in our Unconventional Gas Production business in 2007. We are exploring the sale of a portion of our Unconventional Gas Production assets which will allow us to monetize value from our more mature holdings, while retaining the ability to benefit from the upside of our earlier stage holdings.

## Power and Industrial Projects

Power and Industrial Projects is comprised primarily of projects that deliver utility-type services to industrial, commercial and institutional customers, and biomass energy projects. We provide utility-type services using project assets usually located on the customers' premises in the steel, automotive, pulp and paper, airport and other industries. These services include pulverized coal and petroleum coke supply, power generation, steam production, chilled water production, wastewater treatment and compressed air supply. We own and operate three gas-fired peaking electric generating plants and a biomass-fired electric generating plant and operate one additional gas-fired power plant under contract. Additionally, we own a gas-fired peaking electric generating plant that was taken out of service in September 2006. We develop, own and operate landfill gas recovery systems throughout the United States. We produce metallurgical coke from two coke batteries. The production of coke from our coke batteries generates production tax credits.

**Factors impacting income:** Power and Industrial Projects' reported a net loss of \$80 million in 2006 and net income of \$4 million in 2005. The 2006 net loss is primarily due to impairments. The 2005 net income is attributed to the acquisitions of four on-site energy projects and coke operations in 2005.

(in Millions)	2006	2005	2004
Operating Revenues	\$ 409	\$ 428	\$ 448
Operation and Maintenance	366	329	384
Depreciation and Amortization	48	48	53
Taxes other than Income	12	14	8
Asset (Gains) and Losses, Reserves and Impairments, Net	75	(1)	-
Operating Income (Loss)	(92)	38	3
Other (Income) and Deductions	43	4	28
Minority Interest	1	37	11
Income Taxes			
Provision (Benefit)	(44)	5	(10)
Production Tax Credits	(12)	(12)	(9)
	(56)	(7)	(19)
Net Income (Loss)	\$ (80)	\$ 4	\$ (17)

Operating revenues decreased \$19 million in 2006 and \$20 million in 2005. The 2006 decrease is primarily due to lower coke prices and lower pulverized coal sales. The 2005 decrease reflects the impact from the sale of our interest in a coke battery in 2005 offset by increases at another owned coke battery due to increased output and increased prices. The 2006 and 2005 decreases were partially offset by increased revenue from our on-site energy projects, reflecting the addition of new facilities, completion of new long-term utility services contracts with a large automotive company and a large manufacturer of paper products.

Operation and maintenance expense increased \$37 million in 2006 and decreased \$55 million in 2005, reflecting the 2005 acquisitions of three on-site energy projects and coke operations. The 2005 decrease reflects the impact from the sale of an interest in a coke battery in 2005 resulting in a decrease in expense offset by increases in costs at another owned coke battery reflecting increased output.

Asset (gains) and losses, reserves and impairments, net increased \$76 million in 2006. In 2006, we recorded a \$42 million impairment for one of our 100% owned natural gas-fired generating plants and a \$14 million impairment at our landfill gas recovery unit relating to the write-down of long-lived assets at several landfill sites. Also, during 2006, we recorded a pre-tax impairment loss of \$19 million for the write down of fixed assets and patents at our waste coal recovery business.

Other income and deductions increased \$39 million in 2006 primarily due to a \$32 million impairment of a 50% equity interest in a natural gas-fired generating plant.

Income taxes declined \$49 million in 2006 and increased \$12 million in 2005, reflecting changes in pre-tax income.

**Outlook** - Power and Industrial Projects will continue leveraging its extensive energy-related operating experience and project management capability to develop and grow the on-site energy business. The coke battery and landfill gas recovery businesses generate production tax credits that are subject to an oil price-related phase-out. Due to the relatively low level of production tax credits generated by our coke battery and landfill gas recovery business, a partial or full phase-out of production tax credits in these two businesses is not expected to have a material adverse impact on our Consolidated Statements of Operations, Cash Flow and Financial Position. We are exploring the combination of a sale

of an equity interest in, and recapitalization of, some of the assets of the Power and Industrial Projects business, including the sale or restructuring of the power generation assets. In February 2007, we entered into an agreement to sell our Georgetown peaking electric generating facility. The sale is subject to receipt of regulatory approval and is expected to close in the second half of 2007.

### Energy Trading

Energy Trading focuses on physical power and gas marketing, structured transactions, enhancement of returns from DTE Energy's power plants and the optimization of contracted natural gas pipelines and storage capacity positions. Our customer base is predominantly utilities, local distribution companies, large industrials, and other marketing and trading companies. We enter into derivative financial instruments as part of our marketing and hedging activities. Most of the derivative financial instruments are accounted for under the mark-to-market method, which results in earnings recognition of unrealized gains and losses from changes in the fair value of the derivatives. We utilize forwards, futures, swaps and option contracts to mitigate risk associated with our marketing and trading activity as well as for proprietary trading within defined risk guidelines. Energy Trading is integral in providing commodity risk management services to the other unregulated businesses within DTE Energy.

*Factors impacting income:* Net income increased \$139 million in 2006 and decreased \$128 million in 2005. The 2006 increase is attributed to increased mark-to-market and realized power and gas positions that resulted from significant 2005 mark-to-market losses on derivative contracts used to economically hedge our gas in storage and forward power contracts. The 2005 decrease is attributed to decreased mark-to-market and realized power and gas positions.

<i>(in Millions)</i>	2006	2005	2004
Operating Revenues	\$ 830	\$ 977	\$ 665
Fuel, Purchased Power and Gas	616	984	486
Gross Margin	214	(7)	179
Operation and Maintenance	65	43	41
Depreciation and Amortization	6	4	3
Taxes Other Than Income	1	(1)	-
Operating Income (Loss)	142	(53)	135
Other (Income) and Deductions	(3)	13	5
Income Tax Provision (Benefit)	49	(23)	45
Net Income (Loss)	\$ 96	\$ (43)	\$ 85

*Gross margin* increased \$221 million in 2006 and decreased \$186 million in 2005. The 2006 increase is attributed to a \$168 million mark-to-market increase on power and gas positions and a \$57 million increase in realized power and gas positions. The 2006 results reflect the timing differences from 2005 that largely reversed and favorably impacted earnings. The 2005 decrease is due to a \$121 million mark-to-market decrease on power and gas positions and a \$66 million decrease in realized power and gas positions. The 2005 results reflect the economically favorable decision in early 2005 to delay previously planned withdrawals from gas storage due to a decrease in the current price for natural gas and an increase in the forward price for natural gas.

*Operation and maintenance* expense increased \$22 million in 2006 and \$2 million in 2005. The 2006 increases were due to higher incentive expenses of \$14 million resulting from our strong economic

performance and higher corporate allocation charges of \$10 million.

*Other income and deductions* decreased \$16 million in 2006 and increased \$8 million in 2005. The 2006 decrease is attributed to \$6 million of lower intercompany interest expense and \$8 million of higher intercompany interest income resulting from favorable operating cash flows to fund intercompany loans.

*Income tax provision* increased \$72 million in 2006 and decreased \$68 million in 2005 primarily due to variations in pre-tax earnings.

*Outlook* - Significant portions of the Energy Trading portfolio are economically hedged. The portfolio includes financial instruments and gas inventory, as well as capacity positions of natural gas storage and pipelines and power transmission contracts. The financial instruments are deemed derivatives, whereas the owned gas inventory, pipelines and storage assets are not derivatives. As a result, we will experience earnings volatility as derivatives are marked to market without revaluing the underlying non-derivative assets. The majority of such earnings volatility is associated with the natural gas storage cycle, which does not coincide with the calendar and fiscal year, but runs annually from April of one year to March of the next year. Our strategy is to economically manage the price risk of storage with over-the-counter forwards and futures. This results in gains and losses that are recognized in different interim and annual accounting periods. We are exploring strategic options for the energy trading business.

See "Fair Value of Contracts" section that follows.

### Synthetic Fuel

Synthetic Fuel is comprised of the nine synfuel plants that we operate and that produce synthetic fuel. The production of synthetic fuel from the synfuel plants generates production tax credits.

*Factors impacting income:* Synthetic Fuel net income decreased \$257 million in 2006 and increased \$106 million in 2005. The decline in 2006 was due to higher oil prices resulting in reduced gains from selling interests in our synfuel plants, lower levels of production tax credits and asset impairments and reserves. The increase in 2005 reflects higher gains recognized from selling interests in our synfuel plants, gains on synfuel hedges, and increased levels of production tax credits.

<i>(in Millions)</i>	2006	2005	2004
Operating Revenues	\$ 863	\$ 927	\$ 650
Operation and Maintenance	1,019	1,167	832
Depreciation and Amortization	24	58	33
Taxes other than Income	12	20	8
Asset (Gains) and Losses, Reserves and Impairments, Net	40	(367)	(219)
Operating Income (Loss)	(232)	49	(4)
Other (Income) and Deductions	(20)	(34)	(43)
Minority Interest	(251)	(318)	(223)
Income Taxes			
Provision (Benefit)	14	139	92
Production Tax Credits	(23)	(43)	(29)
	(9)	96	63
Net Income	\$ 48	\$ 305	\$ 199

Operating revenues decreased \$64 million in 2006 and increased \$277 million in 2005. Revenues were lower in 2006 due to our decision to temporarily idle production at all nine of the synfuel facilities. Revenues increased in 2005 primarily reflecting higher synfuel sales due to increased production.

Operation and maintenance expense decreased \$148 million in 2006 and increased \$335 million in 2005. Operation and maintenance expense declined in 2006 due to our decision to temporarily idle production at all nine of the synfuel facilities for a portion of the year. Operating and maintenance expense in 2005 increased reflecting costs associated with increased synthetic fuel production.

Asset (gains) and losses, reserves and impairments, net decreased \$407 million in 2006 and increased \$148 million in 2005. In 2006 and 2005, we deferred gains from the sale of the synfuel facilities, including in 2006, a portion of gains related to fixed payments. Due to the increase in oil prices and the resulting decrease in production and sales volumes, we recorded an accrual for contractual partners' obligations of \$79 million pre-tax in 2006 reflecting the possible refund of amounts equal to our partners' capital contributions or for operating losses that would normally be paid by our partners. We recorded other synfuel-related reserves and impairments in 2006 of \$78 million. To economically hedge our exposure to the risk of an increase in oil prices and the resulting reduction in synfuel sales proceeds, we entered into derivative and other contracts. The derivative contracts are marked-to-market with changes in their fair value recorded as an adjustment to synfuel gains. We recorded net 2006 synfuel hedge mark-to-market gains of \$60 million compared with net 2005 synfuel hedge mark-to-market gains of \$48 million. In 2004, we recorded mark-to-market losses of \$12 million. See Note 14 of the Notes to Consolidated Financial Statements.

(in Millions)	2006	2005	2004
<b>Components of Synfuel (Gains) Losses, Reserves and Impairments, Net</b>			
Gains recognized associated with fixed payments	\$ (43)	\$ (132)	\$ (95)
Gains recognized associated with variable payments	(14)	(187)	(136)
Reserves recorded for contractual partners' obligations	79	-	-
Other reserves and impairments, including partners' share (1)	78	-	-
Hedge (gains) losses (mark-to-market)			
Hedges for 2005 exposure	-	(2)	12
Hedges for 2006 exposure	(66)	(40)	-
Hedges for 2007 exposure	6	(6)	-
	<b>\$ 40</b>	<b>\$ (367)</b>	<b>\$ (219)</b>

(1) Includes \$70 million in 2006, representing our partners' share of the asset impairment, included in Minority Interest.

Minority interest decreased \$67 million in 2006 and increased \$95 million in 2005, reflecting our partners' share of operating losses associated with synfuel operations, as well as our partners' \$70 million share of the asset impairment in 2006. The sale of interests in our synfuel facilities during prior periods resulted in allocating a larger percentage of such losses to our partners.

Income taxes declined \$105 million in 2006 and increased \$33 million in 2005, reflecting changes in pre-tax income due to synfuel

related loss reserves and the impairment of fixed assets, compared to pre-tax income in 2005.

**Outlook** - Due to the implementation of our hedging strategy, we expect to continue to operate the synfuel plants through December 31, 2007, when synfuel-related production tax credits expire.

## CORPORATE & OTHER

Corporate & Other includes various corporate staff functions. As these functions support the entire Company, their costs are fully allocated to the various segments based on services utilized. Therefore the effect of the allocation on each segment can vary from year to year. Additionally, Corporate & Other holds certain non-utility debt, assets held for sale, and energy-related investments.

**Factors impacting income:** Corporate & Other results declined by \$9 million in 2006 and declined \$40 million in 2005. The 2006 decline was primarily due to higher Michigan Single Business Taxes. The 2005 decline was primarily a result of the parent company not allocating merger interest to Detroit Edison and MichCon. Partially offsetting 2005 increased expenses were reduced Michigan Single Business Taxes and gains on the sale of non-strategic assets.

## DISCONTINUED OPERATIONS

**DTE Georgetown (Georgetown)** - We own Georgetown, an 80 MW natural gas-fired peaking electric generating plant. In the fourth quarter of 2006, management approved the marketing of Georgetown for sale. In December 2006, Georgetown met the Statement of Financial Accounting Standards (SFAS) No. 144 criteria of an asset "held for sale" and we reported its operating results as a discontinued operation. We did not recognize an impairment loss since the carrying value of Georgetown's assets, less costs to sell approximated its fair value. In February 2007, we entered into an agreement to sell our Georgetown peaking electric generating facility. The sale is subject to receipt of regulatory approval and is expected to close in the second half of 2007.

**DTE Energy Technologies (Dtech)** - We own Dtech, which assembled, marketed, distributed and serviced distributed generation products, provided application engineering, and monitored and managed on-site generation system operations. In July 2005, management approved the restructuring of this business resulting in the identification of certain assets and liabilities to be sold or abandoned, primarily associated with standby and continuous duty generation sales and service. We recognized a net of tax restructuring loss of \$23 million during the third quarter of 2005 primarily representing the write down to fair value of the assets of Dtech, less costs to sell, and the write-off of goodwill. As we execute the restructuring plan, there may be adjustments to amounts recorded related to the impairment and exit costs.

**Southern Missouri Gas Company (SMGC)** - We owned SMGC, a public utility engaged in the distribution, transmission and sale of natural gas in southern Missouri. In the first quarter of 2004, management approved the marketing of SMGC for sale. As of March 31, 2004, SMGC met the criteria of an asset "held for sale" and we have reported its operating results as a discontinued operation. We recognized a net of tax impairment loss of approximately

\$7 million, representing the write-down to fair value of the assets of SMGC, less costs to sell, and the write-off of allocated goodwill. In November 2004, we entered into a definitive agreement providing for the sale of SMGC. Regulatory approval was received in April 2005 and the sale closed in May 2005. During the second quarter of 2005, we recognized a net of tax gain of \$2 million.

*International Transmission Company (ITC)* - In February 2003, we sold ITC, our electric transmission business, to affiliates of Kohlberg Kravis Roberts & Co. and Trimaran Capital Partners, LLC. Through December 31, 2004, we recorded a gain of \$58 million (net of tax). During the second quarter of 2005, the gain was adjusted to \$56 million (net of tax).

See Note 4 of the Notes to Consolidated Financial Statements.

## CUMULATIVE EFFECT OF ACCOUNTING CHANGES

Effective January 1, 2006, we adopted SFAS No. 123(R), *Share-Based Payment*, using the modified prospective transition method. The cumulative effect of the adoption of SFAS 123(R) was an increase in net income of \$1 million as a result of estimating forfeitures for previously granted stock awards and performance shares.

In the fourth quarter of 2005, we adopted *FASB Interpretation FIN No. 47, Accounting for Conditional Asset Retirement Obligations*, an interpretation of SFAS No. 143 that required additional new accounting rules for asset retirement obligations. The cumulative effect of adopting these new accounting rules reduced 2005 earnings by \$3 million.

## Capital Resources and Liquidity

### Cash Requirements

We use cash to maintain and expand our electric and gas utilities and to grow our non-utility businesses, retire and pay interest on long-term debt and pay dividends. Our strategic direction anticipates base level capital investments and expenditures for existing businesses in 2007 of up to \$1.4 billion. The capital needs of our utilities will increase due primarily to environmental related expenditures. We may spend an additional \$125 million on growth-related projects within our non-utility businesses in 2007.

Capital spending for general corporate purposes will increase in 2007, primarily as a result of environmental spending. We anticipate environmental expenditures of approximately \$253 million in 2007 and up to approximately \$2.3 billion of future capital expenditures to satisfy both existing and proposed new requirements.

We expect non-utility capital spending will approximate \$300 million to \$400 million annually for the next several years. Capital spending for growth of existing or new businesses will depend on the existence of opportunities that meet our strict risk-return and value creation criteria.

Debt maturing in 2007 totals approximately \$346 million.

We believe that we will have sufficient internal and external capital resources to fund anticipated capital requirements.

<i>(in Millions)</i>	2006	2005	2004
<b>Cash and Cash Equivalents</b>

Net Increase in Cash and Cash Equivalents	\$ 59	\$ 32	\$ 2

### Cash from Operating Activities

A majority of the Company's operating cash flow is provided by our electric and gas utilities, which are significantly influenced by factors such as weather, electric Customer Choice, regulatory deferrals, regulatory outcomes, economic conditions and operating costs. Our non-utility businesses also provide sources of cash flow to the enterprise, primarily from the synthetic fuels business, which we believe, subject to considerations discussed below, will provide up to approximately \$900 million of cash during 2007-2009.

Cash from operations totaling \$1.5 billion in 2006 was up \$455 million from the comparable 2005 period. The operating cash flow comparison reflects an increase of \$352 million in net income, after adjusting for non-cash items (depreciation, depletion, amortization, deferred taxes and gains), and a \$103 million decrease in working capital and other requirements. Most of the improvement was driven by higher net income at Detroit Edison which was the result of improved revenues and gross margin stemming from a full year of higher rates granted in the 2004 rate orders and lower customer choice penetration. The working capital improvement was driven by MichCon which resulted primarily from declining GCR factors which had the effect of lowering customer accounts receivable balances. This improvement was partially offset by working capital requirements at Detroit Edison which resulted from pension and Voluntary Employees Beneficiary Association (VEBA) contributions totaling \$271 million in 2006.

Cash from operations totaling \$1.0 billion in 2005 was up \$6 million from the comparable 2004 period. The operating cash flow comparison reflects an increase of over \$83 million in net income, after adjusting for non-cash items (depreciation, depletion, amortization, deferred taxes and gains), substantially offset by a \$77 million increase in working capital and other requirements. Most of the improvement was driven by higher net income at Detroit Edison which was the result of improved revenues and gross margin stemming from higher rates granted in the 2004 rate orders, warmer weather, and lower customer choice penetration. The offsetting increase in working capital requirements was driven by a \$127 million PSCR under-recovery in 2005 as compared to a \$112 million over-recovery in 2004. Working capital requirements also reflect the higher cost of gas at MichCon and our Energy Trading segment. MichCon's working capital and other requirements were \$136 million higher in 2005 compared to 2004 primarily due to the impact of higher gas costs. This impact was reflected by accounts receivable balances that were \$198 million higher at December 31, 2005 than the previous year at MichCon. The increase in working capital requirements was mitigated by lower income tax payments in 2005 and company initiatives to improve cash flow, including better inventory management, cash sales transactions and the utilization of letters of credit.

*Outlook* - We expect cash flow from operations to increase over the long-term primarily due to improvements from higher earnings at our utilities. We are incurring costs associated with implementation of our Performance Excellence Process, but we expect to realize sustained net cost savings beginning in 2007. We also may be impacted by the delayed collection of underrecoveries of our PSCR and GCR costs and electric and gas accounts receivable as a result of MPSC orders. Gas prices are likely to be a source of volatility with regard to working capital requirements for the foreseeable future. We are continuing our efforts to identify opportunities to improve cash flow through working capital initiatives.

We anticipate approximately \$900 million of synfuel-related cash impacts from 2007 through 2009, which consists of cash from operations and proceeds from option hedges, and approximately \$500 million of tax credit carryforward utilization and other tax benefits that are expected to reduce future tax payments. The redeployment of this cash represents a unique opportunity to increase shareholder value and strengthen our balance sheet. We expect to use any such cash and the potential cash from monetization of certain of our non-utility assets and operations to reduce debt and repurchase common stock, and to continue to pursue growth investments that meet our strict risk-return and value creation criteria. We repurchased one million shares of common stock in December 2006. Our objectives for cash redeployment are to strengthen the balance sheet and coverage ratios to improve our current credit rating and outlook, and to have any monetization be accretive to earnings per share.

### **Cash from Investing Activities**

Cash inflows associated with investing activities are primarily generated from the sale of assets. In any given year, we will look to realize cash from under-performing or non-strategic assets. Capital spending within the utility business is primarily to maintain our generation and distribution infrastructure, comply with

environmental regulations and gas pipeline replacements. Capital spending within our non-utility businesses is for ongoing maintenance and expansion. The balance of non-utility spending is for growth, which we manage very carefully. We look to make investments that meet strict criteria in terms of strategy, management skills, risks and returns. All new investments are analyzed for their rates of return and cash payback on a risk adjusted basis. We have been disciplined in how we deploy capital and will not make investments unless they meet our criteria. For new business lines, we invest tentatively based on research and analysis. We start with a limited investment, we evaluate results and either expand or exit the business based on those results. In any given year, the amount of growth capital will be determined by the underlying cash flows of the Company with a clear understanding of any potential impact on our credit ratings.

Net cash outflows relating to investing activities increased \$392 million in 2006 compared to 2005. The 2006 change was primarily due to increased capital expenditures. The increase in capital expenditures was driven by environmental, Enterprise Business Systems development and distribution projects at Detroit Edison, pipeline reliability and inventory management projects at MichCon, and growth-oriented projects across our non-utility segments.

Net cash outflows relating to investing activities increased \$121 million in 2005. The increase was primarily due to increased capital expenditures, partially offset by higher synfuel proceeds. Spending on growth project investments increased \$123 million in 2005 while spending on environmental projects was \$44 million higher than the 2004 period.

Longer term, with the expected improvement at our utilities and assuming continued cash generation from the synfuel business, cash flows are expected to improve. We will continue to pursue opportunities to grow our businesses in a disciplined fashion if we can find opportunities that meet our strategic, financial and risk criteria.

### **Cash from Financing Activities**

We rely on both short-term borrowing and long-term financing as a source of funding for our capital requirements not satisfied by the Company's operations. Short-term borrowings, which are mostly in the form of commercial paper borrowings, provide us with the liquidity needed on a daily basis. Our commercial paper program is supported by our unsecured credit facilities.

Our strategy is to have a targeted debt portfolio blend as to fixed and variable interest rates and maturity. We continually evaluate our leverage target, which is currently 50% to 52%, to ensure it is consistent with our objective to have a strong investment grade debt rating. We have completed a number of refinancings with the effect of extending the average maturity of our long-term debt and strengthening our balance sheet. The extension of the average maturity was accomplished at interest rates that lowered our debt costs.

Net cash used for financing activities increased \$36 million during 2006 compared to 2005, due mostly to a decrease in short-term borrowings and issuance of common stock and long-term debt, partially offset by a decrease in debt redemptions.

Net cash used for financing activities improved \$145 million in 2005 due primarily to the issuance of common stock which resulted from the conversion of our equity security units.

See Notes 11 and 12 of the Notes to Consolidated Financial Statements.

In August 2006, DTE Energy and Detroit Edison filed a combined shelf registration statement for the issuance of securities in an unlimited amount for three years from its effective date. MichCon has a separate effective registration statement providing for the issuance of \$200 million of securities.

Common stock issuances or repurchases can also be a source or use of cash. In January 2005, we announced that the DTE Energy Board of Directors has authorized the repurchase of up to \$700 million in common stock through 2008. The authorization provides Company management with flexibility to pursue share repurchases from time to time, and will depend on future cash flows and investment opportunities. We repurchased one million shares of our common stock in December 2006. We also contributed \$170 million of DTE Energy common stock to our pension plan in the first quarter of 2004. In August 2005, we issued 3.7 million shares of common stock in conjunction with the settlement of the stock purchase component of our equity security units.

## Contractual Obligations

The following table details our contractual obligations for debt redemptions, leases, purchase obligations and other long-term obligations as of December 31, 2006:

(in Millions)	Total	Less Than 1 Year	1-3 Years	4-5 Years	After 5 Years
<b>Contractual Obligations</b>					
<b>Long-term debt:</b>					
Mortgage bonds, notes and other	\$ 6,163	\$ 236	\$ 1,124	\$ 1,061	\$ 3,742
Securitization bonds	1,295	111	391	314	479
Trust preferred-linked securities	289	-	-	-	289
Capital lease obligations	120	14	44	21	41
Interest	6,433	471	1,298	659	4,005
Operating leases	333	53	102	51	127
Electric, gas, fuel, transportation and storage purchase obligations (1)	6,249	3,007	2,437	135	670
Other long-term obligations	291	157	75	25	34
<b>Total obligations</b>	<b>\$ 21,173</b>	<b>\$ 4,049</b>	<b>\$ 5,471</b>	<b>\$ 2,266</b>	<b>\$ 9,387</b>

(1) Excludes amounts associated with full requirements contracts where no stated minimum purchase volume is required.

## Credit Ratings

Credit ratings are intended to provide banks and capital market participants with a framework for comparing the credit quality of securities and are not a recommendation to buy, sell or hold securities. Management believes that the current credit ratings of the Company provide sufficient access to the capital markets. However, disruptions in the banking and capital markets not specifically related to the company may affect our ability to access these funding sources or cause an increase in the return required by investors.

We have issued guarantees for the benefit of various non-utility subsidiaries. In the event that our credit rating is downgraded to below investment grade, certain of these guarantees would require us to post cash or letters of credit valued at approximately \$383 million at December 31, 2006. Additionally, upon a downgrade, our trading business could be required to restrict operations and our access to the short-term commercial paper market could be restricted or eliminated. While we currently do not anticipate such a downgrade, we cannot predict the outcome of current or future credit rating agency reviews. The following table shows our credit rating as determined by three nationally respected credit rating agencies. All ratings are considered investment grade and affect the value of the related securities.

Entity	Description	Credit Rating Agency		
		Standard & Poors	Moody's Investors Service	Fitch Ratings
DTE Energy	Senior Unsecured Debt	BBB-	Baa2	BBB
	Commercial Paper	A-2	P-2	F2
Detroit Edison	Senior Secured Debt	BBB+	A3	A-
	Commercial Paper	A-2	P-2	F2
MichCon	Senior Secured Debt	BBB	A3	A-
	Commercial Paper	A-2	P-2	F2

## CRITICAL ACCOUNTING ESTIMATES

There are estimates used in preparing the consolidated financial statements that require considerable judgment. Such estimates relate to regulation, risk management and trading activities, production tax credits, goodwill, pension and postretirement costs, the allowance for doubtful accounts, and legal and tax reserves.

## Regulation

A significant portion of our business is subject to regulation. Detroit Edison and MichCon currently meet the criteria of Statement of Financial Accounting Standards (SFAS) No. 71, Accounting for the Effects of Certain Types of Regulation. Application of this standard results in differences in the application of generally accepted accounting principles between regulated and non-regulated businesses. SFAS No. 71 requires the recording of regulatory assets and liabilities for certain transactions that would have been treated as revenue or expense in non-regulated businesses. Future regulatory changes or changes in the competitive environment could result in discontinuing the application of SFAS No. 71 for some or all of our businesses.

If we were to discontinue the application of SFAS No. 71 on all our operations, we estimate that the extraordinary loss would be as follows:

(in Millions)	
<b>Utility</b>	
Detroit Edison (1)	\$ (161)
MichCon	(46)
<b>Total</b>	<b>\$ (207)</b>

(1) Excludes securitized regulatory assets

Management believes that currently available facts support the continued application of SFAS No. 71 and that all regulatory assets

and liabilities are recoverable or refundable in the current rate environment. See Note 6 of the Notes to Consolidated Financial Statements.

## Risk Management and Trading Activities

All derivatives are recorded at fair value and shown as "Assets or liabilities from risk management and trading activities" in the Consolidated Statement of Financial Position. Risk management activities are accounted for in accordance with SFAS No. 133, Accounting for Derivative Instruments and Hedging Activities, as amended.

The offsetting entry to "Assets or liabilities from risk management and trading activities" is to other comprehensive income or earnings depending on the use of the derivative, how it is designated and if it qualifies for hedge accounting. The fair values of derivative contracts were adjusted each reporting period for changes using market sources such as:

- published exchange traded market data
- prices from external sources
- price based on valuation models

Market quotes are more readily available for short duration contracts. Derivative contracts are only marked to market to the extent that markets are considered highly liquid where objective, transparent prices can be obtained. Unrealized gains and losses are fully reserved for transactions that do not meet this criterion.

## Production Tax Credits

We generate production tax credits from our synfuel, coke battery and landfill gas recovery operations. We recognize earnings as tax credits are generated at our facilities in one of two ways. First, to the extent we have sold an interest in our synfuel facilities to third parties, we recognize gains as synfuel is produced and sold, and when there is persuasive evidence that the sales proceeds have become fixed or determinable, when probability of refund is considered remote and collectibility is reasonably assured. Second, to the extent we generate credits to our own account, we recognize earnings through reduced tax expense.

All production tax credits are subject to audit by the IRS. However, all of our synfuel facilities have received favorable private letter rulings from the IRS with respect to their operations. Audits of five of our synfuel facilities were successfully completed in the past two years. If production tax credits were disallowed in whole or in part as a result of an IRS audit, there could be a significant write-off of previously recorded earnings from such tax credits.

Tax credits generated by our facilities were \$295 million in 2006 as compared to \$617 million in 2005, and \$449 million in 2004. The portion of tax credits generated for our own account was \$35 million in 2006, as compared to \$55 million in 2005, and \$38 million in 2004, with the remaining credits generated allocated to third party partners.

## Goodwill

Certain of our business units have goodwill resulting from purchase

business combinations. In accordance with SFAS No. 142, Goodwill and Other Intangible Assets, each of our reporting units with goodwill is required to perform impairment tests annually or whenever events or circumstances indicate that the value of goodwill may be impaired. In order to perform these impairment tests, we must determine the reporting unit's fair value using valuation techniques, which use estimates of discounted future cash flows to be generated by the reporting unit. These cash flow valuations involve a number of estimates that require broad assumptions and significant judgment by management regarding future performance. To the extent estimated cash flows are revised downward, the reporting unit may be required to write down all or a portion of its goodwill, which would adversely impact our earnings.

As of December 31, 2006, our goodwill totaled \$2.1 billion. The majority of our goodwill is allocated to our utility reporting units. The value of the utility reporting units may be significantly impacted by rate orders and the regulatory environment.

We also have \$4 million of goodwill allocated to the Synthetic Fuel reporting unit. The value of the Synthetic Fuel reporting unit has been impacted by the anticipated phase-out of tax credits. As of December 31, 2006, we have evaluated the impact of a phase-out of synfuel tax credits on our valuation assumptions. We have determined that the fair value of the Synthetic Fuel reporting unit exceeds the carrying value and no impairment of goodwill exists. These assumptions may change as the value of the synfuel tax credits change.

During 2005 we recorded an impairment of \$16 million to goodwill related to discontinuing the operations of Dtech.

Based on our 2006 goodwill impairment test, we determined that the fair value of our remaining operating reporting units exceed their carrying value and no impairment existed. We will continue to monitor our estimates and assumptions regarding future cash flows. While we believe our assumptions are reasonable, actual results may differ from our projections.

## Pension and Postretirement Costs

Our costs of providing pension and postretirement benefits are dependent upon a number of factors, including rates of return on plan assets, the discount rate, the rate of increase in health care costs and the amount and timing of plan sponsor contributions.

We had pension costs for qualified pension plans of \$125 million in 2006 (including Special Termination Benefits of \$49 million), \$90 million in 2005, and \$81 million in 2004. Postretirement benefits costs for all plans were \$197 million in 2006 (including Special Termination Benefits of \$8 million), \$155 million in 2005, and \$125 million in 2004. Pension and postretirement benefits costs for 2006 are calculated based upon a number of actuarial assumptions, including an expected long-term rate of return on our plan assets of 8.75%. In developing our expected long-term rate of return assumption, we evaluated input from our consultants, including their review of asset class risk and return expectations as well as inflation assumptions. Projected returns are based on broad equity and bond markets. Our 2007 expected long-term rate of return on plan assets is based on an asset allocation assumption utilizing active investment management of 65% in equity markets, 20% in fixed

income markets, and 15% invested in other assets. Because of market volatility, we periodically review our asset allocation and rebalance our portfolio when considered appropriate. Given market conditions, we believe that 8.75% is a reasonable long-term rate of return on our plan assets for 2007. We will continue to evaluate our actuarial assumptions, including our expected rate of return, at least annually.

We base our determination of the expected return on qualified plan assets on a market-related valuation of assets, which reduces year-to-year volatility. This market-related valuation recognizes changes in fair value in a systematic manner over a three-year period. Accordingly, the future value of assets will be impacted as previously deferred gains or losses are recorded. We have unrecognized net gains due to the performance of the financial markets. As of December 31, 2006, we had \$39 million of cumulative gains that remain to be recognized in the calculation of the market-related value of assets.

The discount rate that we utilize for determining future pension and postretirement benefit obligations is based on a yield curve approach and a review of bonds that receive one of the two highest ratings given by a recognized rating agency. The yield curve approach matches projected plan pension and postretirement benefit payment streams with bond portfolios reflecting actual liability duration unique to our plans. The discount rate determined on this basis decreased from 5.9% at December 31, 2005 to 5.7% at December 31, 2006. Due to recent company contributions, financial market performance and lower discount rates, we estimate that our 2007 pension costs will approximate \$66 million (excluding Special Termination Benefits) compared to \$85 million (excluding Special Termination Benefits) in 2006 and our 2007 postretirement benefit costs will approximate \$184 million compared to \$189 million (excluding Special Termination Benefits of \$8 million) in 2006. In the last several years, we have made modifications to the pension and postretirement benefit plans to mitigate the earnings impact of higher costs. Future actual pension and postretirement benefit costs will depend on future investment performance, changes in future discount rates and various other factors related to plan design. Additionally, future pension costs for Detroit Edison will be affected by a pension tracking mechanism, which was authorized by the MPSC in its November 2004 rate order. The tracking mechanism provides for the recovery or refunding of pension costs above or below the amount reflected in Detroit Edison's base rates. In April 2005, the MPSC approved the deferral of the non-capitalized portion of MichCon's negative pension expense. MichCon will record a regulatory liability for any negative pension costs, as determined under generally accepted accounting principles.

Lowering the expected long-term rate of return on our plan assets by one-percentage-point would have increased our 2006 qualified pension costs by approximately \$22 million. Lowering the discount rate and the salary increase assumptions by one-percentage-point would have increased our 2006 pension costs by approximately \$10 million. Lowering the health care cost trend assumptions by one-percentage-point would have decreased our postretirement benefit service and interest costs for 2006 by approximately \$25 million.

The market value of our pension and postretirement benefit plan assets has been affected by the financial markets. The value of our plan assets was \$3.3 billion at December 31, 2004 and November 30, 2005. The value at November 30, 2006 was \$3.5 billion. The

investment performance returns and declining discount rates required us to recognize an additional minimum pension liability, an intangible asset and an entry to other comprehensive loss (shareholders' equity) in 2004 and 2005. At December 31, 2006, we adopted SFAS No. 158 that required us to recognize the underfunded status of our pension and other postretirement plans. The impact of the adoption of SFAS 158 was an increase in pension and postretirement benefit liabilities of approximately \$1.3 billion. We requested and received agreement from the MPSC to record the additional liability amounts for the Detroit Edison and MichCon benefit plans on the Statement of Financial Position as a Regulatory asset. As a result, Regulatory assets were increased by approximately \$1.2 billion. The remainder of the increase in pension and postretirement benefit liabilities is included in Accumulated Other Comprehensive Loss, net of tax.

Pension and postretirement costs and pension cash funding requirements may increase in future years without substantial returns in the financial markets. We made a \$170 million contribution to our pension plan in the form of DTE Energy common stock in 2004. We did not make pension contributions in 2005 and made a \$180 million cash contribution in 2006. At the discretion of management, we anticipate making up to a \$180 million contribution to our qualified pension plans in 2007 and up to \$600 million over the next five years. Also, we anticipate making up to a \$15 million contribution to our nonqualified benefit plans in 2007 and up to \$35 million over the next five years. We contributed \$80 million to our postretirement plans in 2004. We did not contribute to our postretirement plans in 2005 and made a \$116 million contribution to our postretirement benefit plans in 2006. At the discretion of management, we anticipate making up to a \$116 million contribution to our postretirement plans in 2007 and up to \$580 million over the next five years.\*

In December 2003, the Medicare Prescription Drug, Improvement and Modernization Act was signed into law. This Act provides for a federal subsidy to sponsors of retiree health care benefit plans that provide a benefit that is at least actuarially equivalent to the benefit established by law. The effects of the subsidy on the measurement of net periodic postretirement benefit costs reduced costs by \$17 million in 2006, \$20 million in 2005 and \$16 million in 2004.

See Note 16 of the Notes to Consolidated Financial Statements.

### **Allowance for Doubtful Accounts**

We establish an allowance for doubtful accounts based upon factors surrounding the credit risk of specific customers, historical trends, economic conditions, age of receivables and other information. Higher customer bills due to increased gas prices, the lack of adequate levels of assistance for low-income customers and economic conditions have also contributed to the increase in past due receivables. As a result of these factors, our allowance for doubtful accounts increased in 2005 and 2006. We believe the allowance for doubtful accounts is based on reasonable estimates. As part of the 2005 rate order for MichCon, the MPSC provided for the establishment of an uncollectible accounts tracking mechanism that partially mitigates the impact associated with MichCon uncollectible expenses. However, failure to make continued progress in collecting our past due receivables in light of rising energy prices would unfavorably affect operating results and cash flow.

## Legal and Tax Reserves

We are involved in various legal and tax proceedings, claims and litigation arising in the ordinary course of business. We regularly assess our liabilities and contingencies in connection with asserted or potential matters, and establish reserves when appropriate. Legal reserves are based upon management's assessment of pending and threatened legal proceedings and claims against the Company. Tax reserves are based upon management's assessment of potential adjustments to tax positions taken. We regularly review ongoing tax audits and prior audit experience, in addition to current tax and accounting authority in assessing potential adjustments.

## ENVIRONMENTAL MATTERS

Protecting the environment, as well as correcting past environmental damage, continues to be a focus of state and federal regulators. Legislation and/or rulemaking could further impact the electric utility industry including Detroit Edison. The Environmental Protection Agency (EPA) and the Michigan Department of Environmental Quality (MDEQ) have aggressive programs to clean-up contaminated property.

### Electric Utility

*Air* - Detroit Edison is subject to EPA ozone transport and acid rain regulations that limit power plant emissions of sulfur dioxide and nitrogen oxides. In March 2005, EPA issued additional emission reduction regulations relating to ozone, fine particulate, regional haze and mercury air pollution. The new rules will lead to additional controls on fossil-fueled power plants to reduce nitrogen oxide, sulfur dioxide and mercury emissions. To comply with these requirements, Detroit Edison has spent approximately \$875 million through 2006. We estimate Detroit Edison will incur future capital expenditures of up to \$222 million in 2007 and up to \$2 billion of additional capital expenditures through 2018 to satisfy both the existing and proposed new control requirements.

The EPA has ongoing enforcement actions against several major electric utilities citing violations of new source provisions of the Clean Air Act. Detroit Edison received and responded to information requests from the EPA on this subject. The EPA has not initiated proceedings against Detroit Edison. In October 2003, the EPA promulgated revised regulations to clarify new source review provisions going forward. Several states and environmental organizations have challenged these regulations and, in December 2003, a stay was issued until the U.S. Court of Appeals D.C. Circuit renders an opinion in the case. We cannot predict the future impact of this issue upon Detroit Edison.

We may also incur liabilities as a result of potential future requirements to address the climate change issue. There may be legislative action to address the issue of changes in climate that result from the build up of greenhouse gases, including carbon dioxide and methane, in the atmosphere. We cannot predict the impact any legislative action may have on the Company.

*Water* - In response to an EPA regulation, currently under judicial review, Detroit Edison may be required to examine alternatives for reducing the environmental impacts of the cooling water intake structures at several of its facilities. Based on the results of the

studies to be conducted over the next several years, Detroit Edison may be required to install additional control technologies to reduce the impacts of the intakes. Initially, we estimated that we will incur up to approximately \$53 million over the next three to five years in additional capital expenditures to comply with these requirements. However, a recent court decision remanded back to the EPA several provisions of the federal regulation which may result in a delay in compliance requirements. The court decision also raised the possibility that the Company may have to install cooling towers at some facilities. We cannot predict the effect on Detroit Edison of this court decision or any resulting regulations.

*Contaminated Sites* - Detroit Edison conducted remedial investigations at contaminated sites, including two former manufactured gas plant (MGP) sites, the area surrounding an ash landfill and several underground and aboveground storage tank locations. We have a reserve balance of \$11 million as of December 31, 2006 for the remediation of these sites over the next several years. In addition, Detroit Edison expects to make approximately \$5 million of capital improvements to the ash landfill in 2007.

### Gas Utility

*Contaminated Sites* - Prior to the construction of major interstate natural gas pipelines, gas for heating and other uses was manufactured locally from processes involving coal, coke or oil. Gas Utility owns, or previously owned, 15 former MGP sites. Investigations have revealed contamination related to the by-products of gas manufacturing at each site. In addition to the MPG sites, Gas Utility is also in the process of cleaning up other contaminated sites. Cleanup activities associated with these sites will be conducted over the next several years. As a result of these determinations, we have recorded liabilities of \$41 million and \$1 million for the MGPs and other contaminated sites, respectively. It is estimated that Gas Utility may incur \$5 million in expenses related to cleanup costs in 2007.

In 1993, a cost deferral and rate recovery mechanism was approved by the MPSC for investigation and remediation costs incurred at former MGP sites in excess of this reserve. After a study was completed in 1995, Gas Utility accrued an additional liability and a corresponding regulatory asset of \$35 million. During 2006, we spent approximately \$2 million investigating and remediating these former MGP sites. In December 2006, we retained multiple environmental consultants to estimate the project cost to remediate each MGP site. We accrued an additional \$7 million in remediation liabilities associated with former MGP holders and additional cleanup cost, to increase the reserve balance to \$41 million as of December 31, 2006.

Any significant change in assumptions, such as remediation techniques, nature and extent of contamination and regulatory requirements, could impact the estimate of remedial action costs for the sites and thereby affect the Company's financial position and cash flows. However, we anticipate the cost deferral and rate recovery mechanism approved by the MPSC will prevent environmental costs from having a material adverse impact on our results of operations.

### Other

Our non-utility affiliates are subject to a number of environmental laws and regulations dealing with the protection of the environment

from various pollutants. We are in the process of installing new environmental equipment at our coke battery facility in Michigan. We expect the project to be completed within one year. Our non-utility affiliates are substantially in compliance with all environmental requirements.

Various state and federal laws regulate our handling, storage and disposal of waste materials. The EPA and the MDEQ have aggressive programs to manage the clean up of contaminated property. We have extensive land holdings and, from time to time, must investigate claims of improperly disposed contaminants. We anticipate our utility and non-utility companies may periodically be included in various types of environmental proceedings.

## ENTERPRISE BUSINESS SYSTEMS

In 2003, we began the development of our Enterprise Business Systems (EBS) project, an enterprise resource planning system initiative to improve existing processes and to implement new core information systems, relating to finance, human resources, supply chain and work management. As part of this initiative, we are implementing EBS software including, among others, products developed by SAP AG and MRO Software, Inc. The first phase of implementation occurred in 2005 in the regulated electric fossil generation unit. Additional phases of implementation are planned for 2007. The conversion of data and the implementation and operation of EBS will be continuously monitored and reviewed and should ultimately strengthen our internal control structure and lead to increased cost efficiencies. Although our implementation plan includes detailed testing and contingency arrangements to ensure a smooth and successful transition, we can provide no assurance that complications will not arise that could interrupt our operations.

We have spent approximately \$330 million through the end of 2006 and expect total spending over the life of the project to be between \$375 million and \$400 million. We expect the benefits of lower costs, faster business cycles, repeatable and optimized processes, enhanced internal controls, improvements in inventory management and reductions in system support costs to outweigh the expense of our investment in this initiative.

## MISO

The MISO was formed in 1996 by its member transmission owners and in December 2001 received FERC approval as a Regional Transmission Organization (RTO) authorized to provide regional transmission services as prescribed by FERC in its Order 2000. Order 2000 requires an RTO to perform eight functions, including tariff administration, transmission system congestion management, provision of ancillary services to support transmission operations, market monitoring, interregional coordination and the coordination of system planning and expansion. MISO's independence from ownership of either generation or transmission facilities is intended to enable it to ensure fair access to the transmission grid, and through its congestion management role, MISO is also charged with ensuring grid reliability. MISO's initial provision of transmission services in December 2001 was known as Day 1 operations.

In keeping with Order 2000, which permits RTOs to provide real-time

energy imbalance services and a market-based mechanism for congestion management, MISO, on April 1, 2005, launched its Midwest Energy Market, or Day 2 operations, and began regional wholesale electric market operations and transmission service throughout its area. A key feature of the Midwest Energy Market is the establishment of Locational Marginal Prices (LMPs) which provide price transparency for the sale and purchase of wholesale electricity at different locations in the market territory. The LMP is the market clearing price at a specific pricing location in the Midwest Energy Market that is equal to the cost of supplying the next increment of load at that location. The value of an LMP is the same whether a purchase or sale is made at that location. Detroit Edison participates in the Midwest Energy Market by offering its generation on a day-ahead and real time basis and by bidding for power in the market to serve its load. The cost of power procured from the market net of any gain realized from generation sold into the market is included and recovered through the PSCR mechanism. In addition, LMPs are expected to encourage new generation to locate where the power produced is of most value to the load and is expected to identify where new transmission facilities are needed to relieve grid congestion.

MISO is compensated for assuring grid reliability and for supporting the energy market through FERC-approved rates charged to load. Detroit Edison became a non-transmission owning member of MISO in compliance with section 10w (1) of PA 141. The MPSC has ordered that MISO costs charged to Detroit Edison should be recovered through the PSCR mechanism.

## FEDERAL ENERGY POLICY ACT OF 2005

In August 2005, the Energy Policy Act of 2005 (Energy Act) was signed into law. Among other provisions, the Energy Act:

- establishes mandatory electric reliability standards;
- repeals the Public Utility Holding Company Act of 1935;
- renews the Price Anderson Act for twenty years which provides liability protection for nuclear power plants;
- provides financial incentives for nuclear license applications completed by 2008;
- increases funding levels for the Low-Income Home Energy Assistance Program; and
- increases FERC oversight responsibilities for the electric utility industry.

The implementation of the Energy Act requires proceedings at the state level and development of regulations by the FERC, as well as other federal agencies. The impact of the Energy Act on our results of operations will depend on the implementation of final rules and cannot be fully determined at this time.

## NEW ACCOUNTING PRONOUNCEMENTS

See Note 3 of the Notes to Consolidated Financial Statements.

## FAIR VALUE OF CONTRACTS

The following disclosures provide enhanced transparency of the

derivative activities and position of our trading businesses and our other businesses.

We use the criteria in SFAS No. 133, *Accounting for Derivative Instruments and Hedging Activities*, as amended and interpreted, to determine if certain contracts must be accounted for as derivative instruments. The rules for determining whether a contract meets the criteria for derivative accounting are numerous and complex. Moreover, significant judgment is required to determine whether a contract requires derivative accounting, and similar contracts can sometimes be accounted for differently. If a contract is accounted for as a derivative instrument, it is recorded in the financial statements as "Assets or Liabilities from risk management and trading activities", at the fair value of the contract. The recorded fair value of the contract is then adjusted quarterly to reflect any change in the fair value of the contract, a practice known as mark-to-market (MTM) accounting.

Fair value represents the amount at which willing parties would transact an arms-length transaction. To determine the fair value of contracts accounted for as derivative instruments, we use a combination of quoted market prices and mathematical valuation models. Valuation models require various inputs, including forward prices, volatility, interest rates, and exercise periods.

Contracts we typically classify as derivative instruments are power, gas and oil forwards, futures, options and swaps, as well as foreign currency contracts. Items we do not generally account for as derivatives (and which are therefore excluded from the following tables) include gas inventory, gas storage and transportation arrangements, full-requirements power contracts and gas and oil reserves. As subsequently discussed, we have fully reserved the value of derivative contracts beyond the liquid trading timeframe thereby not impacting income.

The subsequent tables contain the following four categories represented by their operating characteristics and key risks.

- "Proprietary Trading" represents derivative activity transacted with the intent of taking a view, capturing market price changes, or putting capital at risk. This activity is speculative in nature as opposed to hedging an existing exposure.
- "Structured Contracts" represents derivative activity transacted with the intent to capture profits by originating substantially hedged positions with wholesale energy marketers, utilities, retail aggregators and alternative energy suppliers. Although transactions are generally executed with a buyer and seller simultaneously, some positions remain open until a suitable offsetting transaction can be executed.
- "Economic Hedges" represents derivative activity associated with assets owned and contracted by DTE Energy, including forward sales of gas production and trades associated with owned transportation and storage capacity. Changes in the value of derivatives in this category economically offset changes in the value of underlying non-derivative positions, which do not qualify for fair value accounting. The difference in accounting treatment of derivatives in this category and the underlying non-derivative positions can result in significant earnings volatility as discussed in more detail in the preceding Results of Operations section.
- "Other Non-Trading Activities" primarily represent derivative activity associated with our gas reserves and synfuel operations. A substantial portion of the price risk associated with the gas reserves has been mitigated through 2013. Changes in the value of the hedges are recorded as "Assets or Liabilities from risk management and trading activities," with an offset in other comprehensive income to the extent that the hedges are deemed effective. Oil-related derivative contracts have been executed to economically hedge cash flow risks related to underlying, non-derivative synfuel related positions through 2007. The amounts shown in the following tables exclude the value of the underlying gas reserves and synfuel proceeds including changes therein.

## Roll-Forward of Mark-to-Market Energy Contract Net Assets

The following tables provide details on changes in our mark-to-market net asset or (liability) position during 2006:

(in Millions)	Trading Activities				Other	
	Proprietary Trading	Structured Contracts	Economic Hedges	Total	Non-Trading Activities	Total
MTM at December 31, 2005	\$ (108)	\$ (136)	\$ (110)	\$ (354)	\$ (140)	\$ (494)
Reclassified to realized upon settlement	(21)	83	57	119	92	211
Liquidation of in-the-money positions (1)	-	-	(123)	(123)	-	(123)
Changes in fair value recorded to income	(5)	35	140	170	(6)	164
Amortization of option premiums	114	(2)	-	112	(40)	72
Amounts recorded to unrealized income	88	116	74	278	46	324
Amounts recorded in OCI	-	14	-	14	(3)	11
Option premiums paid and other	11	4	-	15	73	88
MTM at December 31, 2006	\$ (9)	\$ (2)	\$ (36)	\$ (47)	\$ (24)	\$ (71)

(1) In conjunction with our overall tax planning and cash initiatives, we monetized certain in-the-money contracts while simultaneously entering into at-the-market contracts with various counterparties. This had the impact of optimizing taxable income and cash flow while having minimal impact on earnings.

The following table provides a current and noncurrent analysis of "Assets and Liabilities from risk management and trading activities", as reflected on the Consolidated Statement of Financial Position as of December 31, 2006. Amounts that relate to contracts that become due within twelve months are classified as current and all remaining amounts are classified as noncurrent.

(in Millions)	Trading Activities					Other Non-Trading Activities	Total Assets (Liabilities)
	Proprietary Trading	Structured Contracts	Economic Hedges	Eliminations	Totals		
Current assets	\$ 62	\$ 193	\$ 108	\$ (57)	\$ 306	\$ 155	\$ 461
Noncurrent assets	7	55	108	(7)	163	1	164
Total MTM assets	69	248	216	(64)	469	156	625
Current liabilities	(71)	(189)	(132)	57	(335)	(102)	(437)
Noncurrent liabilities	(7)	(61)	(120)	7	(181)	(78)	(259)
Total MTM liabilities	(78)	(250)	(252)	64	(516)	(180)	(696)
Total MTM net assets (liabilities)	\$ (9)	\$ (2)	\$ (36)	\$ -	\$ (47)	\$ (24)	\$ (71)

### Maturity of Fair Value of MTM Energy Contract Net Assets

We fully reserve all unrealized gains and losses related to periods beyond the liquid trading timeframe. Our intent is to recognize MTM activity only when pricing data is obtained from active quotes and published indexes. Actively quoted and published indexes include exchange traded (i.e., NYMEX) and over-the-counter positions for which broker quotes are available. Although the NYMEX has currently quoted prices for the next 72 months, broker quotes for gas and power are generally available for 18 and 24 months into the future, respectively, we fully reserve all unrealized gains and losses related to periods beyond the liquid trading timeframe and which therefore do not impact income.

As a result of adherence to generally accepted accounting principles, the tables above do not include the expected favorable earnings impacts of certain non-derivative gas storage and power contracts. We entered into economically favorable transactions in early 2005 to delay previously planned withdrawals from gas storage due to a decrease in the current price for natural gas and an increase in the forward price for natural gas. We anticipate the financial impact of this timing difference will reverse when the gas is withdrawn from storage in the current storage cycle and is sold at prices significantly in excess of the cost of gas in storage. In addition, we entered into forward power contracts to economically hedge certain physical and capacity power contracts. We expect the timing difference on the forward power contracts will be fully realized by the end of 2007.

The table below shows the maturity of our MTM positions:

(in Millions)					2010 and Beyond	Total Fair Value
Source of Fair Value	2007	2008	2009			
Proprietary Trading	\$ (9)	\$ -	\$ -	\$ -	\$ -	(9)
Structured Contracts	4	(6)	(4)	4		(2)
Economic Hedges	(24)	(8)	(4)	-		(36)
Total Energy Trading Activities	(29)	(14)	(8)	4		(47)
Other Non-Trading Activities	53	(61)	(16)	-		(24)
Total	\$ 24	\$ (75)	\$ (24)	\$ 4		(71)

### Item 7A. Quantitative and Qualitative Disclosures About Market Risk

DTE Energy has commodity price risk in both utility and non-utility businesses arising from market price fluctuations.

The Electric and Gas utility businesses have risks in conjunction

with the anticipated purchases of coal, natural gas, uranium, electricity, and base metals to meet their service obligations. Further, changes in the price of electricity can impact the level of exposure of Customer Choice programs and uncollectible expenses at the Electric Utility. In addition, changes in the price of natural gas can impact the valuation of lost gas, storage sales revenue and uncollectible expenses at the Gas Utility.

To limit our exposure to commodity price fluctuations, the Utility businesses have applied various approaches to manage this risk. The approaches include forward energy, capacity, storage and futures contracts, as well as regulatory rate-recovery mechanisms. Regulatory rate-recovery occurs in the form of PSCR and GCR mechanisms (see Note 1 of the Notes to Consolidated Financial Statements) and a tracking mechanism to mitigate some losses from customer migration due to electric Customer Choice programs.

The non-utility businesses have risk in conjunction with electricity, natural gas, crude oil and coal.

Our Power and Industrial Projects and Synthetic Fuel segments are subject to crude oil, electricity, natural gas and coal based product price risk. As previously discussed, production tax credits generated by DTE Energy's synfuel, coke battery and landfill gas recovery operations are subject to phase-out if domestic crude oil prices reach certain levels. The benefits associated with tax credits may be subject to changes in federal tax law. Also, we have entered into a series of derivative contracts for 2007 to economically hedge the impact of oil prices on a portion of our synfuel cash flow. See Note 14 of the Notes to Consolidated Financial Statements. To limit our exposure to the other commodities we use forward energy, capacity and futures contracts.

Our Unconventional Gas Production business segment has exposure to natural gas and, to a lesser extent, crude oil price fluctuations. These commodity price fluctuations can impact both current year earnings and reserve valuations. To manage this exposure we use forward energy and futures contracts.

Our Energy Trading business segment has exposure to electricity, natural gas and crude oil price fluctuations. These risks are managed through its energy marketing and trading operations through the use of forward energy, capacity, storage and futures contracts, within pre-determined risk parameters.

Our Coal and Gas Midstream business segment has exposure to natural gas and coal price fluctuations. These coal price risks are managed primarily through its coal transportation and marketing

operations through the use of forward coal and futures contracts. The Gas Midstream business unit manages its exposure through the sale of long-term storage and transportation contracts.

## Credit Risk

### Bankruptcies

We purchase and sell electricity, gas, coal, coke and other energy products from and to numerous companies operating in the steel, automotive, energy, retail and other industries. Certain of our customers have filed for bankruptcy protection under Chapter 11 of the U. S. Bankruptcy Code. We regularly review contingent matters relating to these customers and our purchase and sale contracts and we record provisions for amounts considered at risk of probable loss. We believe our previously accrued amounts are adequate for probable loss. The final resolution of these matters is not expected to have a material effect on our financial statements.

### Other

We engage in business with customers that are non-investment grade. We closely monitor the credit ratings of these customers and, when deemed necessary, we request collateral or guarantees from such customers to secure their obligations.

### Energy Trading

We are exposed to credit risk through trading activities. Credit risk is the potential loss that may result if our trading counterparties fail to meet their contractual obligations. We utilize both external and internally generated credit assessments when determining the credit quality of our trading counterparties. The following table displays the credit quality of our trading counterparties as of December 31, 2006:

<i>(in Millions)</i>	Credit Exposure before Cash Collateral	Cash Collateral	Net Credit Exposure
Investment Grade (1)			
A- and Greater	\$ 526	\$ (126)	\$ 400
BBB+ and BBB	111	-	111
BBB-	107	-	107
Total Investment Grade	744	(126)	618
Non-investment grade (2)	68	-	68
Internally Rated - investment grade (3)	104	-	104
Internally Rated - non-investment grade (4)	9	(4)	5
Total	\$ 925	\$ (130)	\$ 795

(1) This category includes counterparties with minimum credit ratings of Baa3 assigned by Moody's Investors Service (Moody's) and BBB- assigned by Standard & Poor's Rating Group, a division of the McGraw-Hill Companies, Inc. (Standard & Poor's). The five largest counterparty exposures combined for this category represented 27% of the total gross credit exposure.

(2) This category includes counterparties with credit ratings that are below investment grade. The five largest counterparty exposures combined for this category represented less than 7% of the total gross credit exposure.

(3) This category includes counterparties that have not been rated by Moody's or Standard & Poor's, but are considered investment grade based on DTE Energy's evaluation of the counterparty's creditworthiness. The five largest counterparty exposures combined for this category represented 7% of the total gross credit exposure.

(4) This category includes counterparties that have not been rated by Moody's or Standard & Poor's, and are considered non-investment grade based on DTE Energy's evaluation of the counterparty's creditworthiness. The five largest counterparty exposures combined for this category represented less than 1% of the gross credit exposure.

## Interest Rate Risk

DTE Energy is subject to interest rate risk in connection with the issuance of debt and preferred securities. In order to manage interest costs, we may use treasury locks and interest rate swap agreements. Our exposure to interest rate risk arises primarily from changes in U.S. Treasury rates, commercial paper rates and London Inter-Bank Offered Rates (LIBOR). As of December 31, 2006, the Company has a floating rate debt to total debt ratio of approximately 18% (excluding securitized debt).

## Foreign Currency Risk

DTE Energy has foreign currency exchange risk arising from market price fluctuations associated with fixed priced contracts. These contracts are denominated in Canadian dollars and are primarily for the purchase and sale of power as well as for long-term transportation capacity. To limit our exposure to foreign currency fluctuations, we have entered into a series of currency forward contracts through January 2011. Additionally, we may enter into fair value currency hedges to mitigate changes in the value of contracts or loans.

## Summary of Sensitivity Analysis

We performed a sensitivity analysis to calculate the fair values of our commodity contracts, long-term debt instruments and foreign currency forward contracts. The sensitivity analysis involved increasing and decreasing forward rates at December 31, 2006 by a hypothetical 10% and calculating the resulting change in the fair values.

The results of the sensitivity analysis calculations follow:

<i>(in Millions)</i>	Assuming a 10% increase in rates	Assuming a 10% decrease in rates	Change in the fair value of
Activity			
Gas Contracts	\$ (10)	\$ 11	Commodity contracts
Power Contracts	\$ (17)	\$ 17	Commodity contracts
Oil Contracts	\$ 78	\$ (62)	Commodity options
Interest Rate Risk	\$ (314)	\$ 339	Long-term debt
Foreign Currency Risk	\$ 2	\$ (2)	Forward contracts

## Report of Management's Responsibility for Financial Statements and Internal Control over Financial Reporting

### *Financial Statements*

We have reviewed this annual report to shareholders, and based on our knowledge, this annual report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this annual report. Also, based on our knowledge, the financial statements, and other financial information included in this annual report, fairly present in all material respects the financial condition, results of operations and cash flows of DTE Energy as of, and for, the periods presented.

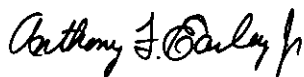

### *Internal Control Over Financial Reporting*

The management of DTE Energy Company is responsible for establishing and maintaining adequate internal control over financial reporting. DTE Energy Company's internal control system was designed to provide reasonable assurance to the company's management and board of directors regarding the preparation and fair presentation of published financial statements.

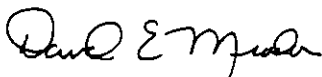

All internal control systems, no matter how well designed, have inherent limitations. Therefore, even those systems determined to be effective can provide only reasonable assurance with respect to financial statement preparation and presentation. Projections of any evaluation of the effectiveness to future periods are subject to the risks that control may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

DTE Energy Company management assessed the effectiveness of the company's internal control over financial reporting as of December 31, 2006. In making this assessment, it used the criteria set forth in *Internal Control-Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on our assessment, management believes that, as of December 31, 2006, DTE Energy Company's internal control over financial reporting was effective based on those criteria.

Our management's assessment of the effectiveness of the company's internal control over financial reporting has been audited by DTE Energy's independent registered public accounting firm, as stated in their report which is included herein.

Anthony F. Earley Jr.  
Chairman and Chief Executive Officer

David E. Meador  
Executive Vice President and Chief Financial Officer

# DTE Energy Company

## Report of Independent Registered Public Accounting Firm

To the Board of Directors and Shareholders of DTE Energy Company:

We have audited management's assessment, included in the accompanying Management's report on internal control over financial reporting, that DTE Energy Company and subsidiaries (the "Company") maintained effective internal control over financial reporting as of December 31, 2006, based on criteria established in *Internal Control-Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission. The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting. Our responsibility is to express an opinion on management's assessment and an opinion on the effectiveness of the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, evaluating management's assessment, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed by, or under the supervision of, the company's principal executive and principal financial officers, or persons performing similar functions, and effected by the company's board of directors, management, and other personnel to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of the inherent limitations of internal control over financial reporting, including the possibility of collusion or improper management override of controls, material misstatements due to error or fraud may not be prevented or detected on a timely basis. Also, projections of any evaluation of the effectiveness of the internal control over financial reporting to future periods are subject to the risk that the controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, management's assessment that the Company maintained effective internal control over financial reporting as of December 31, 2006, is fairly stated, in all material respects, based on the criteria established in *Internal Control-Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission. Also in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2006, based on the criteria established in *Internal Control-Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated financial statements of the Company as of December 31, 2006 and for the year then ended; and our report dated March 1, 2007 expressed an unqualified opinion on those consolidated financial statements and included an explanatory paragraph regarding the Company's adoption of new accounting principles related to accounting for defined benefit pension and other postretirement plans and share based payments.

## Report of Independent Registered Public Accounting Firm

To the Board of Directors and Shareholders of DTE Energy Company:

We have audited the consolidated statement of financial position of DTE Energy Company and subsidiaries (the "Company") as of December 31, 2006 and 2005, and the related consolidated statements of operations, cash flows, and changes in shareholders' equity and comprehensive income for each of the three years in the period ended December 31, 2006. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on the consolidated financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such consolidated financial statements present fairly, in all material respects, the financial position of DTE Energy Company and subsidiaries at December 31, 2006 and 2005, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2006 in conformity with accounting principles generally accepted in the United States of America.

As discussed in Note 3 to the consolidated financial statements, in connection with the required adoption of new accounting principles, in 2006 the Company changed its method of accounting for defined benefit pension and other postretirement plans and share based payments. As discussed in Note 1 to the consolidated financial statements, in connection with the required adoption of a new accounting principle, in 2005 the Company changed its method of accounting for asset retirement obligations.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the effectiveness of the Company's internal control over financial reporting as of December 31, 2006, based on the criteria established in *Internal Control-Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated March 1, 2007 expressed an unqualified opinion on management's assessment of the effectiveness of the Company's internal control over financial reporting and an unqualified opinion on the effectiveness of the Company's internal control over financial reporting.

# DTE Energy Company

## Notes To Consolidated Financial Statements

### NOTE 1 - SIGNIFICANT ACCOUNTING POLICIES

#### Corporate Structure

DTE Energy owns the following businesses:

- The Detroit Edison Company (Detroit Edison), an electric utility engaged in the generation, purchase, distribution and sale of electric energy to approximately 2.2 million customers in southeast Michigan;
- Michigan Consolidated Gas Company (MichCon), a natural gas utility engaged in the purchase, storage, transmission and distribution and sale of natural gas to approximately 1.3 million customers throughout Michigan; and
- Other non-utility subsidiaries engaged in a variety of energy related businesses such as coal transportation and marketing, and gas storage and transportation, natural gas exploration and production, power and industrial projects, energy marketing and trading and synthetic fuel.

Detroit Edison and MichCon are regulated by the Michigan Public Service Commission (MPSC). The Federal Energy Regulatory Commission (FERC) regulates certain activities of Detroit Edison's business as well as various other aspects of businesses under DTE Energy. In addition, we are regulated by other federal and state regulatory agencies including the Nuclear Regulatory Commission (NRC), the Environmental Protection Agency (EPA) and the Michigan Department of Environmental Quality (MDEQ).

References in this report to "we," "us," "our," "Company" or "DTE" are to DTE Energy and its subsidiaries, collectively.

#### Principles of Consolidation

We consolidate all majority owned subsidiaries and investments in entities in which we have controlling influence. Non-majority owned investments are accounted for using the equity method when the company is able to influence the operating policies of the investee. Non-majority owned investments include investments in limited liability companies, partnerships or joint ventures. When we do not influence the operating policies of an investee, the cost method is used. We eliminate all intercompany balances and transactions.

For entities that are considered variable interest entities, we apply the provisions of Financial Accounting Standards Board (FASB) Interpretation No. (FIN) 46-R, *Consolidation of Variable Interest Entities, an Interpretation of ARB No. 51*.

#### Basis of Presentation

The accompanying consolidated financial statements are prepared using accounting principles generally accepted in the United States of America. These accounting principles require us to use

estimates and assumptions that impact reported amounts of assets, liabilities, revenues and expenses, and the disclosure of contingent assets and liabilities. Actual results may differ from our estimates.

#### Revenues

Revenues from the sale and delivery of electricity, and the sale, delivery and storage of natural gas are recognized as services are provided. Detroit Edison and MichCon record revenues for electric and gas provided but unbilled at the end of each month.

Detroit Edison's accrued revenues include a component for the cost of power sold that is recoverable through the Power Supply Cost Recovery (PSCR) mechanism. MichCon's accrued revenues include a component for the cost of gas sold that is recoverable through the Gas Cost Recovery (GCR) mechanism. Annual PSCR and GCR proceedings before the MPSC permit Detroit Edison and MichCon to recover prudent and reasonable supply costs. Any overcollection or undercollection of costs, including interest, will be reflected in future rates. See Note 6.

Non-utility businesses recognize revenues as services are provided and products are delivered. Our Energy Trading segment records in revenues net unrealized derivative gains and losses on energy trading contracts, including those to be physically settled.

#### Comprehensive Income

Comprehensive income is the change in common shareholders' equity during a period from transactions and events from non-owner sources, including net income. As shown in the following table, amounts recorded to other comprehensive income at December 31, 2006 include: unrealized gains and losses from derivatives accounted for as cash flow hedges, unrealized gains and losses on available for sale securities, minimum pension liabilities and pension and postretirement costs. As a result of the adoption of Statement of Financial Accounting Standards (SFAS) No. 158 effective December 31, 2006, the minimum pension liability is no longer recognized. Pension and postretirement costs consisting of deferred actuarial losses, prior service costs and transition amounts related to the pension and postretirement plans were recorded pursuant to SFAS No. 158.

(in Millions)	Net Unrealized Losses on Derivatives	Net Unrealized Gains on Investments	Pension and Postretirement Obligations	Accumulated Other Comprehensive Income
Beginning balances	\$ (206)	\$ 22	\$ (87)	\$ (271)
Current-period change	102	(7)	3	98
Adjustment to initially apply SFAS No. 158, net of tax	-	-	(38)	(38)
Ending balance	\$ (104)	\$ 15	\$ (122)	\$ (211)

## Cash Equivalents and Restricted Cash

Cash and cash equivalents include cash on hand, cash in banks and temporary investments purchased with remaining maturities of three months or less. Restricted cash consists of funds held to satisfy requirements of certain debt and partnership operating agreements. Restricted cash is classified as a current asset as all restricted cash is designated for interest and principal payments due within one year.

## Inventories

We value fuel inventory and materials and supplies at average cost.

Gas inventory at MichCon is determined using the last-in, first-out (LIFO) method. At December 31, 2006, the replacement cost of gas remaining in storage exceeded the \$77 million LIFO cost by \$236 million. During 2006, MichCon liquidated 5.1 billion cubic feet of prior years' LIFO layers. The liquidation reduced 2006 cost of gas by approximately \$1 million, but had no impact on earnings as a result of the GCR mechanism. At December 31, 2005, the replacement cost of gas remaining in storage exceeded the \$119 million LIFO cost by \$496 million. During 2004, MichCon liquidated 5.7 billion cubic feet of prior years' LIFO layers. The liquidation reduced 2004 cost of gas by approximately \$7 million, but had no impact on earnings as a result of the GCR mechanism.

Our Energy Trading segment uses the average cost method for its gas in inventory.

## Property, Retirement and Maintenance, and Depreciation and Depletion

Summary of property by classification as of December 31:

<i>(in Millions)</i>	2006	2005
<b>Property, Plant and Equipment</b>		
Electric Utility		
Generation	\$ 7,667	\$ 7,375
Distribution	6,249	6,041
<b>Total Electric Utility</b>	<b>13,916</b>	<b>13,416</b>
Gas Utility		
Distribution	2,175	2,098
Storage	245	237
Other	985	929
<b>Total Gas Utility</b>	<b>3,405</b>	<b>3,264</b>
<b>Non-utility and Other</b>	<b>1,903</b>	<b>1,980</b>
<b>Total Property, Plant and Equipment</b>	<b>19,224</b>	<b>18,660</b>
<b>Less Accumulated Depreciation and Depletion</b>		
Electric Utility		
Generation	(3,410)	(3,439)
Distribution	(2,170)	(2,156)
<b>Total Electric Utility</b>	<b>(5,580)</b>	<b>(5,595)</b>
Gas Utility		
Distribution	(926)	(891)
Storage	(108)	(104)
Other	(513)	(481)
<b>Total Gas Utility</b>	<b>(1,547)</b>	<b>(1,476)</b>
<b>Non-utility and Other</b>	<b>(646)</b>	<b>(759)</b>
<b>Total Accumulated Depreciation and Depletion</b>	<b>(7,773)</b>	<b>(7,830)</b>
<b>Net Property, Plant and Equipment</b>	<b>\$ 11,451</b>	<b>\$ 10,830</b>

Property is stated at cost and includes construction-related labor, materials, overheads and an allowance for funds used during construction. The cost of properties retired, less salvage value, at Detroit Edison and MichCon is charged to accumulated depreciation.

Expenditures for maintenance and repairs are charged to expense when incurred, except for Fermi 2. Approximately \$16 million of expenses related to the anticipated Fermi 2 refueling outage scheduled for 2007 were accrued at December 31, 2006. Amounts are being accrued on a pro-rata basis over an 18-month period that began in May 2006. We have utilized the accrue-in-advance policy for nuclear refueling outage costs since the Fermi 2 plant was placed in service in 1988. This method matches the regulatory recovery of these costs in rates set by the MPSC. See Note 3.

We base depreciation provisions for utility property at Detroit Edison and MichCon on straight-line and units of production rates approved by the MPSC. The composite depreciation rate for Detroit Edison was 3.3% in 2006, 3.4% in 2005 and 2004. The composite depreciation rate for MichCon was 2.8%, 3.2% and 3.6% in 2006, 2005, and 2004, respectively.

The average estimated useful life for each major class of utility property, plant and equipment as of December 31, 2006 follows:

### Estimated Useful Lives in Years

Utility	Generation	Distribution	Transmission
Electric	40	37	N/A
Gas	N/A	37	40

Non-utility property is depreciated over its estimated useful life using straight-line, declining-balance or units-of-production methods. The estimated useful lives for major classes of non-utility assets and facilities ranges from 20 to 40 years.

We credit depreciation, depletion and amortization expense when we establish regulatory assets for stranded costs related to the electric Customer Choice program and deferred environmental expenditures. We charge depreciation, depletion and amortization expense when we amortize the regulatory assets. We credit interest expense to reflect the accretion income on certain regulatory assets.

Intangible assets relating to capitalized software are classified as Property, Plant and Equipment and the related amortization is included in Accumulated Depreciation and Depletion on the Consolidated Statement of Financial Position. We capitalize the costs associated with computer software we develop or obtain for use in our business. We amortize intangible assets on a straight-line basis over the expected period of benefit, ranging from 5 to 20 years. Intangible assets amortization expense was \$37 million in 2006, \$41 million in 2005 and \$43 million in 2004. The gross carrying amount and accumulated amortization of intangible assets at December 31, 2006 were \$503 million and \$108 million, respectively. The gross carrying amount and accumulated amortization of intangible assets at December 31, 2005 were \$470 million and \$168 million, respectively. Amortization expense of intangible assets is estimated to be \$46 million annually for 2007 through 2011.

## Asset Retirement Obligations

We have recorded asset retirement obligations in accordance with SFAS No. 143, *Accounting for Asset Retirement Obligations* and FASB Interpretation FIN No. 47, *Accounting for Conditional Asset Retirement Obligations, an interpretation of FASB Statement No. 143*. We have a legal retirement obligation for the decommissioning costs for our Fermi 1 and Fermi 2 nuclear plants. To a lesser extent, we have legal retirement obligations for the synthetic fuel operations, gas production facilities, gas gathering facilities and various other operations. We have conditional retirement obligations for gas pipeline retirement costs and disposal of asbestos at certain of our power plants. To a lesser extent, we have conditional retirement obligations at certain service centers, compressor and gate stations, and disposal costs for PCB contained within transformers and circuit breakers.

For our regulated operations, the adoptions of SFAS No. 143 and FIN 47 resulted primarily in timing differences in the recognition of legal asset retirement costs that we are currently recovering in rates. We defer such differences under SFAS No. 71, *Accounting for the Effects of Certain Types of Regulation*.

As a result of adopting FIN 47 on December 31, 2005, we recorded a plant asset of \$26 million with offsetting accumulated depreciation of \$14 million, and an asset retirement obligation liability of \$124 million. We also recorded a cumulative effect amount related to utility operations as a reduction to a regulatory liability of \$108 million and a cumulative effect charge against earnings of \$3 million, after-tax in 2005.

No liability has been recorded with respect to lead-based paint, as the quantities of lead-based paint in our facilities are unknown. In addition, there is no incremental cost to demolitions of lead-based paint facilities vs. non-lead based paint facilities and no regulations currently exist requiring any type of special disposal of items containing lead-based paint.

Ludington Hydroelectric Power Plant has an indeterminate life and no legal obligation currently exists to decommission the plant at some future date. Substations, manholes and certain other distribution assets within Detroit Edison have an indeterminate life, therefore, no asset retirement liability has been recorded for these assets.

A reconciliation of the asset retirement obligations for 2006 follows:

<i>(in Millions)</i>	
Asset retirement obligations at January 1, 2006	\$ 1,091
Accretion	72
Liabilities incurred	6
Liabilities settled	(7)
Revision in estimated cash flows	59
Asset retirement obligations at December 31, 2006	\$ 1,221

A significant portion of the asset retirement obligations represents nuclear decommissioning liabilities which are funded through a surcharge to electric customers over the life of the Fermi 2 nuclear plant.

## Gas Production

We follow the successful efforts method of accounting for investments in gas properties. Under this method of accounting, all property acquisition costs and costs of exploratory and development wells are capitalized when incurred, pending determination of whether the well has found proved reserves. If an exploratory well has not found proved reserves, the costs of drilling the well are expensed. The costs of development wells are capitalized, whether productive or nonproductive. Geological and geophysical costs on exploratory prospects and the costs of carrying and retaining unproved properties are expensed as incurred. An impairment loss is recorded to the extent that capitalized costs of unproved properties, on a property-by-property basis, are considered not to be realizable. An impairment loss is recorded if the net capitalized costs of proved gas properties exceed the aggregate related undiscounted future net revenues. Depreciation, depletion and amortization of proved gas properties are determined using the units-of-production method.

## Long-Lived Assets

Our long-lived assets are reviewed for impairment whenever events or changes in circumstances indicate the carrying amount of an asset may not be recoverable. If the carrying amount of the asset exceeds the expected future cash flows generated by the asset, an impairment loss is recognized resulting in the asset being written down to its estimated fair value. Assets to be disposed of are reported at the lower of the carrying amount or fair value less cost to sell.

## Intangible Assets

We have certain intangible assets relating to non-utility contracts and emission allowances. We amortize intangible assets on a straight-line basis over the expected period of benefit, ranging from 5 to 26 years. Intangible assets amortization expense was \$5 million in 2006, \$2 million in 2005 and \$1 million in 2004. The gross carrying amount and accumulated amortization of intangible assets at December 31, 2006 were \$80 million and \$8 million, respectively. The gross carrying amount and accumulated amortization of intangible assets at December 31, 2005 were \$102 million and \$3 million, respectively. Amortization expense of intangible assets is estimated to be \$5 million annually for 2007 through 2011.

## Excise and Sales Taxes

We record the billing of excise and sales taxes as a receivable with an offsetting payable to the applicable taxing authority, with no impact on the Consolidated Statement of Operations.

## Deferred Debt Costs

The costs related to the issuance of long-term debt are deferred and amortized over the life of each debt issue. In accordance with MPSC regulations applicable to our electric and gas utilities, the unamortized discount, premium and expense related to debt redeemed with a refinancing are amortized over the life of the replacement issue. Discount, premium and expense on early redemptions of debt associated with non-utility operations are charged to earnings.

## Insured and Uninsured Risks

Our comprehensive insurance program provides coverage for various types of risks. Our insurance policies cover risk of loss from property damage, general liability, workers' compensation, auto liability and directors' and officers' liability. Under our risk management policy, we self-insure portions of certain risks up to specified limits, depending on the type of exposure. We have an actuarially determined estimate of our incurred but not reported liability prepared annually and adjust our reserves for self-insured risks as appropriate.

## Investments in Debt and Equity Securities

We generally classify investments in debt and equity securities as either trading or available-for-sale and have recorded such investments at market value with unrealized gains or losses included in earnings or in other comprehensive income or loss, respectively. Changes in the fair value of nuclear decommissioning-related investments are recorded as adjustments to regulatory assets or liabilities. Our investments are reviewed for impairment each reporting period. If the assessment indicates that the impairment is other than temporary, a loss is recognized resulting in the investment being written down to its estimated fair value. See Note 7.

## Investment in Plug Power

We own 8.8 million shares of Plug Power Inc. We account for our investment under the cost method of accounting. We record our investment at market value and account for unrealized gains and losses in other comprehensive income or loss. In December 2005, we contributed 1.8 million shares of Plug Power to the DTE Energy Foundation that resulted in a gain of approximately \$1 million due to related tax effects. In May 2004, we sold 3.5 million shares of Plug Power stock and recorded a gain of approximately \$14 million (net of taxes).

## Consolidated Statement of Cash Flows

A detailed analysis of the changes in assets and liabilities that are reported in the Consolidated Statement of Cash Flows follows:

<i>(in Millions)</i>	2006	2005	2004
Changes in Assets and Liabilities, Exclusive of Changes Shown Separately			
Accounts receivable, net	\$ 441	\$ (633)	\$ 11
Accrued GCR revenue	120	(16)	(35)
Inventories	(49)	(6)	(40)
Recoverable pension and postretirement costs	(1,184)	61	(20)
Accrued/Prepaid pensions	218	17	88
Accounts payable	(68)	290	266
Accrued PSQR refund	(101)	(127)	112
Exchange gas payable	-	5	(43)
Income taxes payable	46	(38)	(170)
General taxes	3	(11)	(14)
Risk management and trading activities	(518)	353	(64)
Postretirement obligation	1,008	132	29
Other assets	(134)	(9)	75
Other liabilities	226	(96)	(186)
	\$ 8	\$ (78)	\$ 9

Supplementary cash and non-cash information for the years ended December 31, were as follows:

<i>(in Millions)</i>	2006	2005	2004
Cash Paid for:			
Interest (excluding interest capitalized)	\$ 526	\$ 516	\$ 517
Income taxes	\$ 89	\$ 80	\$ 203
Noncash Investing and Financing Activities			
Notes received from sale of synfuel projects	\$ -	\$ 20	\$ 214
Common stock contribution to pension plan	\$ -	\$ -	\$ 170
Sale of assets			
Note receivable	\$ -	\$ 47	\$ -
Other assets	\$ -	\$ 45	\$ -

We entered into a margin loan facility with an affiliate of the clearing agent of a commodity exchange in lieu of posting additional cash collateral (a non-cash transaction). The amount outstanding under the Facility was \$103 million as of December 31, 2005. In October 2006, we changed our clearing agent and entered into a new demand financing agreement for up to \$150 million. The amount outstanding under this new agreement was \$23 million at December 31, 2006. See Note 12.

In October 2006, we purchased the lessor interest in the 66 Bcf Washington 10 gas storage field. Prior to the purchase, we leased the storage rights and lease obligations which were recorded as operating leases. The acquisition resulted in a cash payment of approximately \$13 million and the assumption of approximately \$133 million of project related debt that was recorded on our Consolidated Statement of Financial Position. See Note 11.

## Asset (gains) and losses, reserves and impairments, net

The following items are included in the Asset (gains) and losses, reserves and impairments, net line in the Consolidated Statement of Operations:

<i>(in Millions)</i>	2006	2005	2004
Description			
Synfuel (Gains) Losses, Reserves and Impairments			
Gains recognized for fixed payments	\$ (43)	\$ (132)	\$ (95)
Gains recognized for variable payments	(14)	(187)	(136)
Reserves for contractual partners' obligations	79	-	-
Other reserves and impairments, including partners' share	78	-	-
Hedges (mark-to-market)	(60)	(48)	12
Synfuels (net)	40	(367)	(219)
Other Non-utility impairments:			
Waste coal recovery	19	-	-
Landfill gas recovery	14	-	-
Power generation	42	-	-
	75	-	-
Electric utility sale of land	(6)	(26)	-
Other	(2)	3	-
	\$ 107	\$ (390)	\$ (219)

6	Regulatory Matters
9	Income Taxes
14	Financial and Other Derivative Instruments
16	Retirement Benefits and Trusted Assets
17	Stock-based Compensation

## NOTE 2 - SYNFUEL OPERATIONS

### Synthetic Fuel Operations

We are the operator of nine synthetic fuel production facilities throughout the United States. Synfuel facilities chemically change coal, including waste and marginal coal, into a synthetic fuel as determined under applicable Internal Revenue Service (IRS) rules. Production tax credits are provided for the production and sale of solid synthetic fuels produced from coal. To qualify for the production tax credits, the synthetic fuel must meet three primary conditions: (1) there must be a significant chemical change in the coal feedstock, (2) the product must be sold to an unaffiliated entity, and (3) the production facility must have been placed in service before July 1, 1998. Through December 31, 2006, we have generated and recorded approximately \$580 million in production tax credits.

To reduce U.S. dependence on imported oil, the Internal Revenue Code provides production tax credits as an incentive for taxpayers to produce fuels from alternative sources. This incentive is not deemed necessary if the price of oil increases and provides significant market incentives for the production of these fuels. As such, the tax credit in a given year is reduced if the Reference Price of oil within that year exceeds a threshold price. The Reference Price of a barrel of oil is an estimate of the annual average wellhead price per barrel for domestic crude oil. We project the yearly average wellhead price per barrel of oil for the year to be approximately \$6 lower than the New York Mercantile Exchange (NYMEX) price for light, sweet crude oil. The threshold price at which the credit begins to be reduced was set in 1980 and is adjusted annually for inflation. For 2006, we estimate the threshold price at which the tax credit would begin to be reduced is \$55 per barrel and would be completely phased out if the Reference Price reached \$69 per barrel. As of December 31, 2006, the realized NYMEX daily closing price of a barrel of oil was approximately \$66 for 2006, equating to an estimated Reference Price of \$60, which we estimate to be within the phase-out range.

To mitigate the effect of a potential phase-out and minimize operating losses, we idled production at all nine of the synthetic fuel facilities that we operate on May 12, 2006. The decision to idle synfuel production was driven by the level and volatility of oil prices at that time. During the idle period, we took various steps to reduce our oil price exposure, including, renegotiation of a significant number of commercial agreements. Beginning September 5, 2006 through October 4, 2006, we resumed production at each of the nine synfuel facilities due to these amended commercial agreements and declines in the level of oil prices.

### Gains (Losses) from Sale of Interests in Synthetic Fuel Facilities

Through December 2006, we have sold interests in all of the synthetic fuel production plants, representing approximately 91% of our total production capacity. Proceeds from the sales are contingent upon production levels, the production qualifying for production tax credits, and the value of such credits. Production tax credits are subject to phase-out if domestic crude oil prices reach certain levels. We recognize gains from the sale of interests in the synfuel facilities as synfuel is produced and sold, and when there is persuasive evidence that the sales proceeds have become fixed or determinable and collectibility is reasonably assured. Until the gain recognition criteria are met, gains from selling interests in synfuel facilities are deferred. It is possible that gains will be deferred in the first, second and/or third quarters of each year until there is persuasive evidence that no tax credit phase-out will occur for the applicable calendar year. This could result in shifting earnings from earlier quarters to later quarters of a calendar year. We have recorded a pre-tax loss of \$40 million in 2006 and pre-tax gains of \$367 million and \$219 million in 2005 and 2004, respectively, from the sale of interests in synthetic fuel facilities, net of reserves and impairments.

The gain from the sale of synfuel facilities is comprised of fixed and variable components. The fixed component represents note payments, is not subject to refund, and is recognized as a gain when earned and collectibility is assured. The variable component is based on an estimate of tax credits allocated to our partners and is subject to refund based on the annual oil price phase-out. The variable component is recognized as a gain only when the probability of refund is considered remote and collectibility is assured. Additionally, our partners reimburse us (through the project entity) for the operating losses of the synfuel facilities, referred to as capital contributions. In the event that the tax credit is phased out, we are contractually obligated to refund an amount equal to all or a portion of the operating losses funded by our partners. To assess the probability and estimate the amount of refund, we use valuation and analysis models that calculate the probability of the Reference Price of oil for the year being within or exceeding the phase-out range. We recorded reserves for contractual partners' obligations of \$79 million in 2006.

### Derivative Instruments - Commodity Price Risk

To manage our exposure to the risk of an increase in oil prices that could substantially reduce or eliminate synfuel sales proceeds, we entered into a series of derivative contracts covering a specified number of barrels of oil. The derivative contracts involve purchased and written call options that provide for net cash settlement at expiration based on the full years' average NYMEX trading prices for light, sweet crude oil in relation to the strike prices of each option. These contracts are based on various terms to take advantage of favorable oil price movements. The agreements do not qualify for hedge accounting, therefore, the changes in the fair value of the options are recorded currently in earnings. The fair value changes shown below are recorded as adjustments to the gain from selling interests in synfuel facilities and are included in the Asset gains and losses, reserves and impairments, net line item in the Consolidated Statement of Operations.

<i>(in Millions)</i>	2006	2005	2004
Hedge (gains) losses (mark-to-market)			
Hedges for 2005 exposure	\$ -	\$ (2)	\$ 12
Hedges for 2006 exposure	(66)	(40)	-
Hedges for 2007 exposure	6	(6)	-
	\$ (60)	\$ (48)	\$ 12

## Impairments and Reserves

In 2006, we determined that certain assets related to our synfuel operations were impaired. The decision to record an impairment was based on the level and volatility of oil prices and the ability of the synfuel operations to generate production tax credits. In 2006, we recorded a pre-tax loss of \$157 million within the Asset (gains) and losses, reserves and impairments, net, line item in the Consolidated Statement of Operations. The loss consists of two components; \$78 million for synfuel related fixed asset impairment and inventory write-down and \$79 million for a reserve for capital contributions related to operating losses. We based the impairment decision on an analysis of the undiscounted cash flows from the use and eventual disposition of the assets and determined that the carrying amount of the assets exceeded their expected fair value. The income impact of the fixed asset impairment and inventory write-down was partially offset by \$70 million, representing our partners' share of the asset write down, included in the Minority Interest line in the Consolidated Statement of Operations.

## Guarantees

We have provided certain guarantees and indemnities in conjunction with the sales of interests in our synfuel facilities. The guarantees cover potential commercial, environmental, oil price and tax-related obligations and will survive until 90 days after expiration of all applicable statute of limitations. We estimate that our maximum potential liability under these guarantees at December 31, 2006 is \$2.4 billion. At December 31, 2006, we have reserved \$181 million of our maximum potential liability primarily representing the possible refund of certain payments made by our synfuel partners.

## NOTE 3 - NEW ACCOUNTING PRONOUNCEMENTS

### Accounting for Uncertainty in Income Taxes

In July 2006, the FASB issued Financial Interpretation No. 48 (FIN 48), *Accounting for Uncertainty in Income Taxes - An Interpretation of FASB Statement No. 109 - Accounting for Income Taxes*. FIN 48 clarifies the accounting for uncertainty in income taxes recognized in an enterprise's financial statements in accordance with FASB Statement No. 109. Additionally, it prescribes a recognition threshold and measurement attribute for the financial statement recognition and measurement of a tax position taken or expected to be taken in the tax return. FIN 48 provides guidance on derecognition, classification, interest and penalties; accounting in interim periods, disclosure and transition and is effective for fiscal years beginning after December 15, 2006. We plan to adopt FIN 48 effective January 1, 2007. We do not expect the adoption to have a material impact to the January 1, 2007 balance of retained earnings.

## Fair Value Accounting

In September 2006, the FASB issued SFAS No. 157, *Fair Value Measurements*. SFAS 157 defines fair value, establishes a framework for measuring fair value in generally accepted accounting principles, and expands disclosures about fair value measurements. It emphasizes that fair value is a market-based measurement, not an entity-specific measurement. Fair value measurement should be determined based on the assumptions that market participants would use in pricing an asset or liability. SFAS 157 is effective for fiscal years beginning after November 15, 2007, and interim periods within those fiscal years. We plan to adopt SFAS 157 on January 1, 2008. We are currently assessing the effects of this statement, and have not yet determined the impact on the consolidated financial statements.

In February 2007, the FASB issued SFAS 159, *The Fair Value Option for Financial Assets and Financial Liabilities - Including an Amendment of FASB Statement No. 115*. This standard permits an entity to choose to measure many financial instruments and certain other items at fair-value. The fair value option established by SFAS 159 permits all entities to choose to measure eligible items at fair value at specified election dates. An entity will report unrealized gains and losses on items for which the fair value option has been elected in earnings at each subsequent reporting date. The fair value option: (a) may be applied instrument by instrument, with a few exceptions, such as investments otherwise accounted for by the equity method; (b) is irrevocable (unless a new election date occurs); and (c) is applied only to entire instruments and not to portions of instruments. SFAS 159 is effective as of the beginning of an entity's first fiscal year that begins after November 15, 2007. We are currently assessing the effects of this statement, and have not yet determined the impact on the consolidated financial statements.

### Accounting for Defined Benefit Pension and Other Postretirement Plans

In September 2006, the FASB issued SFAS No. 158, *Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans - an Amendment of FASB Statements No. 87, 88, 106, and 132(R)*. SFAS 158 requires companies to (1) recognize the overfunded or underfunded status of defined benefit pension and defined benefit other postretirement plans in its financial statements, (2) recognize as a component of other comprehensive income, net of tax, the actuarial gains or losses and the prior service costs or credits that arise during the period but are not immediately recognized as components of net periodic benefit cost, (3) recognize adjustments to other comprehensive income when the actuarial gains or losses, prior service costs or credits, and transition assets or obligations are recognized as components of net periodic benefit cost, (4) measure postretirement benefit plan assets and plan obligations as of the date of the employer's statement of financial position, and (5) disclose additional information in the notes to financial statements about certain effects on net periodic benefit cost in the upcoming fiscal year that arise from delayed recognition of the actuarial gains and losses and the prior service cost and credits.

The requirement to recognize the funded status of a defined benefit pension or defined benefit other postretirement plan and the related disclosure requirements was effective for fiscal years ending after December 15, 2006, and we adopted this portion of the standard on December 31, 2006. We requested and received agreement from the MPSC to record the additional liability amounts for Detroit Edison and MichCon on the balance sheet as a regulatory asset.

The requirement to measure plan assets and benefit obligations as of the date of the employer's fiscal year-end statement of financial position is effective for fiscal years ending after December 15, 2008. The Statement provides two options for the transition to a fiscal year end measurement date. We currently use a November 30 measurement date. We have not yet determined which of the available transition measurement options we will use.

See Note 16.

### Accounting for Planned Major Maintenance

In September 2006, the FASB issued its Staff Position (FSP), AUG AIR-1, *Accounting for Planned Major Maintenance Activities*. This FSP prohibits the use of the accrue-in-advance method of accounting for planned major maintenance activities in annual and interim financial reporting periods. We have historically charged expenditures for maintenance and repairs to expense as they were incurred, with the exception of Fermi 2, where we have utilized the accrue-in-advance policy for nuclear refueling outage costs since the plant was placed in service in 1988. We adopted this FSP on December 31, 2006. Although this FSP prohibits use of the accrue-in-advance method, we will continue to use it to account for the cost of Fermi 2 refueling outages because it matches the regulatory recovery of these costs in rates set by the MPSC and, therefore is in compliance with the requirements of SFAS No. 71, *Accounting for the Effects of Certain Types of Regulation*. The adoption of FSP AUG AIR-1 had no income impact on our financial statements. See Note 6.

### Quantifying Misstatements

In September 2006, the SEC staff issued Staff Accounting Bulletin (SAB) Topic 1N, *Financial Statements - Considering the Effects of Prior Year Misstatements When Quantifying Misstatements in Current Year Financial Statements* (SAB 108). SAB 108 addresses how a registrant should quantify the effect of an error on the financial statements. The SEC staff concluded in SAB 108 that a dual approach should be used to compute the amount of a misstatement. Specifically, the amount should be computed using both the "rollover" (current year income statement perspective) and "iron curtain" (year-end balance sheet perspective) methods. We adopted this SAB effective December 31, 2006. Based on our assessment we identified no errors that would require an adjustment to current or prior financial statements; therefore, the adoption of SAB 108 had no financial statement impact.

### Stock Based Compensation

We adopted SFAS No. 123(R), *Share Based Payments* effective January 1, 2006. Previously we had been following the recognition and measurement principles of Accounting Principles Board (APB)

No. 25, *Accounting for Stock Issued to Employees*, and followed the nominal vesting period approach for awards with retirement eligibility provisions. See Note 17 for the effects of the adoption of SFAS No. 123(R).

## NOTE 4 - DISCONTINUED OPERATIONS

### DTE Georgetown (Georgetown)

We own Georgetown, an 80 MW natural gas-fired peaking electric generating plant. In the fourth quarter of 2006, management approved the marketing of Georgetown for sale. In December 2006, Georgetown met the SFAS No. 144 criteria of an asset "held for sale" and we reported its operating results as a discontinued operation. We did not recognize an impairment loss since the net book value of Georgetown's assets, less costs to sell approximated its fair value. As of December 31, 2006, Georgetown's assets are \$23 million and its liabilities are \$1 million. In February 2007, we entered into an agreement to sell our Georgetown peaking electric generating facility. The sale is subject to receipt of regulatory approval and is expected to close in the second half of 2007.

As shown in the following table, we have reported the business activity of Georgetown as a discontinued operation. The amounts exclude general corporate overhead costs:

(in Millions)	Year Ended December 31		
	2006	2005	2004
Revenues (1)	\$ 1	\$ 1	\$ 2
Expenses	3	2	7
Loss before income taxes	(2)	(1)	(5)
Income tax benefit	-	-	(2)
Loss from discontinued operations	\$ (2)	\$ (1)	\$ (3)

(1) Includes intercompany revenues of \$1 million for 2006, 2005 and 2004.

### DTE Energy Technologies (Dtech)

We own Dtech, which assembled, marketed, distributed and serviced distributed generation products, provided application engineering, and monitored and managed on-site generation system operations. In July 2005, management approved the restructuring of this business resulting in the identification of certain assets and liabilities to be sold or abandoned, primarily associated with standby and continuous duty generation sales and service. The systems monitoring business is planned to be retained by the Company.

During the third quarter of 2005, the restructuring plan met criteria to classify the assets as "held for sale." Accordingly, we recognized a net of tax restructuring loss of \$23 million during the third quarter of 2005 primarily representing the write down to fair value of the assets of Dtech, less costs to sell, and the write-off of goodwill of \$16 million. As of December 31, 2006, Dtech had liabilities of \$3 million.

As shown in the following table, we have reported the business activity of Dtech as a discontinued operation. The amounts exclude general corporate overhead costs and operations that are to be retained. We expect continued legal and warranty expenses in 2007 related to Dtech's operations prior to July 2005.

(in Millions)	Year Ended December 31		
	2006	2005	2004
Revenues (1)	\$ 1	\$ 18	\$ 43
Expenses	6	67	70
Loss before income taxes	(5)	(49)	(27)
Income tax benefit	(2)	(14)	(9)
Loss from discontinued operations	\$ (3)	\$ (35)	\$ (18)

(1) Includes intercompany revenues of \$6 million for 2005 and \$5 million for 2004.

## Southern Missouri Gas Company

We owned Southern Missouri Gas Company (SMGC), a public utility engaged in the distribution, transmission and sale of natural gas in southern Missouri. In the first quarter of 2004, management approved the marketing of SMGC for sale. As of March 31, 2004, SMGC met the SFAS No. 144 criteria of an asset "held for sale" and we reported its operating results as a discontinued operation. We recognized a net of tax impairment loss in 2004 of approximately \$7 million, representing the write-down to fair value of the assets of SMGC, less costs to sell, and the write-off of allocated goodwill. In November 2004, we entered into a definitive agreement providing for the sale of SMGC. Regulatory approval was received in April 2005 and the sale was closed in May 2005. During the second quarter of 2005, we recognized a net of tax gain of \$2 million.

## NOTE 5 - OTHER IMPAIRMENTS AND RESTRUCTURING

### Other Impairments

#### Waste Coal Recovery

In 2006, our Power and Industrial Projects segment impaired its investment in proprietary technology used to refine waste coal. The fixed assets at our development operation were impaired due to continued operating losses and negative cash flow. In addition, we impaired all our patents related to waste coal technology. We calculated the expected undiscounted cash flows from the use and eventual disposition of the assets, which indicated that the carrying amount of the assets was not recoverable. We determined the fair value of the assets utilizing a discounted cash flow technique. Through December 31, 2006, we have recorded a pre-tax impairment loss of \$19 million within the Asset (gains) and losses, reserves and impairments, net line in the Consolidated Statement of Operations.

#### Landfill Gas Recovery

In 2006, our Power and Industrial Projects segment recorded a pre-tax impairment loss of \$14 million at our landfill gas recovery unit relating to the write-down of assets at several landfill sites. The fixed assets were impaired due to continued operating losses and the oil price-related phase-out of production tax credits. The impairment was recorded within the Asset (gains) and losses, reserves and impairments, net line in the Consolidated Statement of Operations. We calculated the expected undiscounted cash flows from the use and eventual disposition of the assets, which indicated that the carrying amount of certain assets was not recoverable. We determined the fair value of the assets utilizing a discounted cash flow technique.

### Non-Utility Power Generation

In 2006, our Power and Industrial Projects segment recorded a pre-tax impairment loss totaling \$74 million for its investments in two natural gas-fired electric generating plants.

A loss of \$42 million related to a 100% owned plant is recorded within the Asset (gains) and losses, reserves and impairments, net line in the Consolidated Statement of Operations. The generating plant was impaired due to continued operating losses and the September 2006 delisting by Midwest Independent System Operator (MISO), resulting in the plant no longer providing capacity for the power grid. We calculated the expected undiscounted cash flows from the use and eventual disposition of the plant, which indicated that the carrying amount of the plant was not recoverable. We determined the fair value of the plant utilizing a discounted cash flow technique.

A loss of \$32 million related to a 50% equity interest in a peaking, gas-fired electric generating plant is recorded within the Other (income) and deductions, other expenses line in the Consolidated Statement of Operations. The investment was impaired due to continued operating losses and the expected sale of the investment. We determined the fair value of the plant utilizing a discounted cash flow technique, which indicated that the carrying amount of the investment exceeded its fair value.

### Restructuring - Performance Excellence Process

In mid-2005, we initiated a company-wide review of our operations called the Performance Excellence Process. Specifically, we began a series of focused improvement initiatives within our Electric and Gas Utilities, and associated corporate support functions. We expect this process will be carried out over a two to three year period beginning in 2005.

We have incurred costs to achieve (CTA) for employee severance and other costs. Other costs include project management and consultant support. Pursuant to MPSC authorization, in 2006, Detroit Edison deferred approximately \$102 million of CTA. Detroit Edison will begin amortizing deferred 2006 costs in 2007 as the recovery of these costs was provided for by the MPSC. MichCon cannot defer CTA costs at this time because a recovery mechanism has not been established. See Note 6.

Amounts expensed are recorded in the Operation and maintenance line on the Consolidated Statement of Operations. Deferred amounts are recorded in the Regulatory asset line on the Consolidated Statement of Financial Position. Expenses incurred in 2006 are as follows:

*(in Millions)*

Business Segment	Employee Severance Costs	Other Costs	Total Costs
Costs incurred:			
Electric Utility	\$ 51	\$ 56	\$ 107
Gas Utility	17	7	24
Other	2	1	3
Total costs	70	64	134
Less amounts deferred or capitalized:			
Electric Utility	51	56	107
Amounts expensed	\$ 19	\$ 8	\$ 27

A liability for future CTA associated with the Performance Excellence Process has not been recognized because we have not met the recognition criteria of SFAS No. 146, *Accounting for Costs Associated with Exit or Disposal Activities*.

## NOTE 6 - REGULATORY MATTERS

### Regulation

Detroit Edison and MichCon are subject to the regulatory jurisdiction of the MPSC, which issues orders pertaining to rates, recovery of certain costs, including the costs of generating facilities and regulatory assets, conditions of service, accounting and operating-related matters. Detroit Edison is also regulated by the FERC with respect to financing authorization and wholesale electric activities.

As subsequently discussed in the "Electric Industry Restructuring" section, Detroit Edison's rates were frozen through 2003 and capped for small business customers through 2004 and for residential customers through 2005 as a result of Public Act (PA) 141. However, Detroit Edison was allowed to defer certain costs to be recovered once rates could be increased, including costs incurred as a result of changes in taxes, laws and other governmental actions.

### Regulatory Assets and Liabilities

Detroit Edison and MichCon apply the provisions of SFAS No. 71, *Accounting for the Effects of Certain Types of Regulation*, to their regulated operations. SFAS No. 71 requires the recording of regulatory assets and liabilities for certain transactions that would have been treated as revenue and expense in non-regulated businesses. Continued applicability of SFAS No. 71 requires that rates be designed to recover specific costs of providing regulated services and be charged to and collected from customers. Future regulatory changes or changes in the competitive environment could result in the Company discontinuing the application of SFAS No. 71 for some or all of its utility businesses and may require the write-off of the portion of any regulatory asset or liability that was no longer probable of recovery through regulated rates. Management believes that currently available facts support the continued application of SFAS No. 71 to Detroit Edison and MichCon.

The following are balances and a brief description of the regulatory assets and liabilities at December 31:

*(in Millions)*

	2006	2005
<b>Assets</b>		
Securitized regulatory assets	\$ 1,235	\$ 1,340
Recoverable income taxes related to securitized regulatory assets	\$ 677	\$ 734
Recoverable pension and postretirement costs	1,728	544
Asset retirement obligation	236	196
Other recoverable income taxes	100	104
Recoverable costs under PA 141		
Net stranded costs	-	112
Excess capital expenditures	22	22
Deferred Clean Air Act expenditures	67	82
Midwest Independent System Operator charges	48	56
Electric Customer Choice implementation costs	78	98
Enhanced security costs	13	13
Unamortized loss on reacquired debt	69	73
Deferred environmental costs	40	34
Accrued PSCR/GCR revenue	117	186
Recoverable uncollectibles expense	45	11
Cost to achieve Performance Excellence Process	102	-
Enterprise Business Systems costs	9	-
Other	3	6
	3,354	2,271
Less amount included in current assets	(128)	(197)
	\$ 3,226	\$ 2,074
<b>Liabilities</b>		
Asset removal costs	\$ 576	\$ 567
Accrued pension	72	23
Safety and training cost refund	3	-
Accrued PSCR/GCR refund	81	129
Refundable income taxes	114	125
Fermi 2 refueling outage	16	25
Other	2	2
	864	871
Less amount included in current liabilities	(99)	(156)
	\$ 765	\$ 715

### ASSETS

- *Securitized regulatory assets* - The net book balance of the Fermi 2 nuclear plant was written off in 1998 and an equivalent regulatory asset was established. In 2001, the Fermi 2 regulatory asset and certain other regulatory assets were securitized pursuant to PA 142 and an MPSC order. A non-bypassable securitization bond surcharge recovers the securitized regulatory asset over a fourteen-year period ending in 2015.
- *Recoverable income taxes related to securitized regulatory assets* - Receivable for the recovery of income taxes to be paid on the non-bypassable securitization bond surcharge. A non-bypassable securitization tax surcharge recovers the income tax over a fourteen-year period ending 2015.
- *Recoverable pension and postretirement costs* - The traditional rate setting process allows for the recovery of pension and postretirement costs as measured by generally accepted accounting principles. In 2006, we adopted SFAS No. 158, *Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans*. See Note 16.

- *Asset retirement obligation* - Asset retirement obligations were recorded pursuant to adoption of SFAS No. 143 in 2003 and FIN 47 in 2005. These obligations are primarily for Fermi 2 decommissioning costs that are recovered in rates.
- *Other recoverable income taxes* - Income taxes receivable from Detroit Edison's customers representing the difference in property-related deferred income taxes receivable and amounts previously reflected in Detroit Edison's rates.
- *Net stranded costs* - PA 141 permits, after MPSC authorization, the recovery of and a return on fixed cost deficiency associated with the electric Customer Choice program. Net stranded costs occurred when fixed cost related revenues did not cover the fixed cost revenue requirements.
- *Excess capital expenditures* - Starting in 2004, PA 141 permits, after MPSC authorization, the recovery of and a return on capital expenditures that exceed a base level of depreciation expense.
- *Deferred Clean Air Act expenditures* - PA 141 permits, after MPSC authorization, the recovery of and a return on Clean Air Act expenditures.
- *Midwest Independent System Operator charges* - PA 141 permits, after MPSC authorization, the recovery of and a return on charges from a regional transmission operator such as the Midwest Independent System Operator.
- *Electric Customer Choice implementation costs* - PA 141 permits, after MPSC authorization, the recovery of and a return on costs incurred associated with the implementation of the electric Customer Choice program.
- *Enhanced security costs* - PA 609 of 2002 permits, after MPSC authorization, the recovery of enhanced security costs for an electric generating facility.
- *Unamortized loss on reacquired debt* - The unamortized discount, premium and expense related to debt redeemed with a refinancing are deferred, amortized and recovered over the life of the replacement issue.
- *Deferred environmental costs* - The MPSC approved the deferral and recovery of investigation and remediation costs associated with Gas Utility's former MGP sites.
- *Accrued GCR revenue* - Receivable for the temporary under-recovery of and a return on gas costs incurred by MichCon which are recoverable through the GCR mechanism.
- *Accrued PSCR revenue* - Receivable for the temporary under-recovery of and a return on fuel and purchased power costs incurred by Detroit Edison which are recoverable through the PSCR mechanism.
- *Recoverable uncollectibles expense* - MichCon receivable for the MPSC approved uncollectible expense true-up mechanism that tracks the difference in the fluctuation in uncollectible accounts and amounts recognized pursuant to the MPSC authorization. Of the total amount deferred, \$11 million represents 2005 expenses and is expected to be recovered during 2007. The remainder relates to 2006 expense, the recovery period of which will be determined upon receipt of an MPSC order.
- *Cost to achieve Performance Excellence Process (PEP)* - The MPSC authorized the deferral of costs to implement the PEP. These costs consist of employee severance, project management and consultant support. These costs will be amortized over a ten-year period beginning with the year subsequent to the year the costs were deferred. See Note 5.

- *Enterprise Business Systems (EBS) costs* - Starting in 2006, the MPSC approved the deferral of up to \$60 million of certain EBS costs that would otherwise be expensed.

## LIABILITIES

- *Asset removal costs* - The amount collected from customers for the funding of future asset removal activities.
- *Accrued pension* - Pension expense refundable to customers representing the difference created from volatility in the pension obligation and amounts recognized pursuant to MPSC authorization.
- *Safety and training cost refund* - The MPSC ordered the refund of unspent costs which were included in the Company's rate structure.
- *Accrued PSCR refund* - Payable for the temporary over-recovery of and a return on power supply costs, and beginning with the MPSC's November 2004 rate order, transmission costs incurred by Detroit Edison which are recoverable through the PSCR mechanism.
- *Accrued GCR Refund* - Liability for the temporary over-recovery of and a return on gas costs incurred by MichCon which are recoverable through the GCR mechanism.
- *Refundable income taxes* - Income taxes refundable to MichCon's customers representing the difference in property-related deferred income taxes payable and amounts recognized pursuant to MPSC authorization.
- *Fermi 2 refueling outage* - Liability for refueling outage at Fermi 2 pursuant to MPSC authorization. See Note 3.

## Electric Rate Restructuring Proposal

In February 2005, Detroit Edison filed a rate restructuring proposal with the MPSC to restructure its electric rates and begin phasing out subsidies within the current pricing structure. In December 2005, the MPSC issued an order that did not provide for the comprehensive realignment of the existing rate structure that Detroit Edison requested in its rate restructuring proposal. The MPSC order did take some initial steps to improve the current competitive imbalance in Michigan's electric Customer Choice program. The December 2005 order established cost-based power supply rates for Detroit Edison's full service customers. Electric Customer Choice participants will pay cost-based distribution rates, while Detroit Edison's full service commercial and industrial customers will pay cost-based distribution rates that reflect the cost of the residential rate subsidy. Residential customers continue to pay a subsidized below-cost rate for distribution service. These revenue neutral revised rates were effective February 1, 2006. Detroit Edison was also ordered to file a general rate case by July 1, 2007, based on 2006 actual results.

## Other Postretirement Benefits Costs Tracker

In February 2005, Detroit Edison filed an application, pursuant to the MPSC's November 2004 final rate order, requesting MPSC approval of a proposed tracking mechanism for retiree health care costs. This mechanism would recognize differences between cost levels collected in rates and the actual costs under current accounting rules as regulatory assets or regulatory liabilities with an annual reconciliation proceeding before the MPSC. In February 2006, the MPSC denied Detroit Edison's request and ordered that this issue be addressed in the next general rate case due to be filed by July 1, 2007.

## MPSC Show-Cause Order

In March 2006, the MPSC issued an order directing Detroit Edison to show cause by June 1, 2006 why its retail electric rates should not be reduced in 2007. The MPSC cited certain changes that had occurred since the November 2004 order in Detroit Edison's last general rate case, or were expected to occur. These changes included: declines in electric Customer Choice program participation, expiration of the residential rate caps, and projected reductions in Detroit Edison operating costs. The show cause filing was to reflect sales, costs and financial conditions that were expected to occur by 2007. On June 1, 2006, Detroit Edison filed its response explaining why its electric rates should not be reduced in 2007. Detroit Edison indicated that it will have a revenue deficiency of approximately \$45 million beginning in 2007 due to significant capital investments over the next several years for infrastructure improvements to enhance electric service reliability and for mandated environmental expenditures. The impacts of these investments will be partially offset by efficiency and cost-savings measures that have been initiated. Therefore, Detroit Edison requested that the show cause proceeding allow for rate increase adjustments based on the combined effects of investment expenditures and cost-savings programs. The MPSC denied this request and indicated that a full review of rates will be made in Detroit Edison's next general rate case, which is due to be filed by July 1, 2007.

The MPSC issued an order approving a settlement agreement in this proceeding on August 31, 2006. The order provided for an annualized rate reduction of \$53 million for 2006, effective September 5, 2006. Beginning January 1, 2007, and continuing until the later of March 31, 2008 or 12 months from the filing date of Detroit Edison's next general rate case, rates will be reduced by an additional \$26 million, for a total reduction of \$79 million. The revenue reduction is net of the recovery of the amortization of the costs associated with the implementation of the Performance Excellence Process. The settlement agreement provides for some level of realignment of the existing rate structure by allocating a larger percentage share of the rate reduction to the commercial and industrial customer classes than to the residential customer classes.

As part of the settlement agreement, a Choice Incentive Mechanism (CIM) was established with a base level of electric choice sales set at 3,400 GWh. The CIM prescribes regulatory treatment of changes in non-fuel revenue attributed to increases or decreases in electric Customer Choice sales. The CIM has a deadband of  $\pm 200$  GWh. If electric Customer Choice sales exceed 3,600 GWh, Detroit Edison will be able to recover 90% of its reduction in non-fuel revenue from full service customers up to \$71 million. If electric Customer Choice sales fall below 3,200 GWh, Detroit Edison will credit 100% of the increase in non-fuel revenue to the unrecovered regulatory asset recovery balances.

## Regulatory Accounting Treatment for Performance Excellence Process

In May 2006, Detroit Edison and MichCon filed applications with the MPSC to allow deferral of costs associated with the implementation of the Performance Excellence Process, a company-wide cost-savings and performance improvement program. Implementation costs include project management, consultant support and employee

severance expenses. Detroit Edison and MichCon sought MPSC authorization to defer and amortize Performance Excellence Process implementation costs for accounting purposes to match the expected savings from the Performance Excellence Process program with the related CTA. Detroit Edison and MichCon anticipate that the Performance Excellence Process will be carried out over a two to three year period beginning in 2006. Detroit Edison's CTA is estimated to total between \$160 million and \$190 million. MichCon's CTA is estimated to total between \$55 million and \$60 million. In September 2006, the MPSC issued an order approving a settlement agreement that allows Detroit Edison and MichCon, commencing in 2006, to defer the incremental CTA. Further, the order provides for Detroit Edison and MichCon to amortize the CTA deferrals over a ten-year period beginning with the year subsequent to the year the CTA was deferred. Detroit Edison recorded the deferred CTA costs of \$102 million as a regulatory asset and will begin amortizing deferred 2006 costs in 2007 as the recovery of these costs was provided for by the MPSC in the order approving the settlement in the show cause proceeding. MichCon cannot defer CTA costs at this time because a recovery mechanism has not been established.

## Electric Industry Restructuring

In 2000, the Michigan Legislature enacted PA 141 that reduced electric retail rates by 5%, as a result of savings derived from the issuance of securitization bonds. The legislation also contained provisions freezing rates through 2003 and preventing rate increases (i.e., rate caps) for small business customers through 2004 and for residential customers through 2005. The price freeze period expired on February 20, 2004 pursuant to an MPSC order. In addition, PA 141 codified the MPSC's existing electric Customer Choice program and provided Detroit Edison with the right to recover net stranded costs associated with electric Customer Choice. Detroit Edison was also allowed to defer certain costs to be recovered once rates could be increased, including costs incurred as a result of changes in taxes, laws and other governmental actions.

As required by PA 141, the MPSC conducted a proceeding to develop a methodology for calculating net stranded costs associated with electric Customer Choice. In a December 2001 order, the MPSC determined that Detroit Edison could recover net stranded costs associated with the fixed cost component of its electric generation operations. Specifically, there would be an annual proceeding or true-up before the MPSC reconciling the receipt of revenues associated with the fixed cost component of its generation services to the revenue requirement for the fixed cost component of those services, inclusive of an allowance for the cost of capital. Any resulting shortfall in recovery, net of mitigation, would be considered a net stranded cost. The MPSC authorized Detroit Edison to establish a regulatory asset to defer recovery of its incurred stranded costs, subject to review in a subsequent annual net stranded cost proceeding.

## 2004 PSR Reconciliation and 2004 Net Stranded Cost Case

In accordance with the MPSC's directive in Detroit Edison's November 2004 rate order, in March 2005, Detroit Edison filed a

joint application and testimony in its 2004 PSCR Reconciliation Case and its 2004 Net Stranded Cost Recovery Case. In September 2006, the MPSC issued an order recognizing \$19 million of 2004 net stranded costs that required Detroit Edison to write-off \$112 million of 2004 net stranded costs. The MPSC order resulted in a \$39 million reduction in the 2004 PSCR over-collection by allowing Detroit Edison to retain the benefit of third party wholesale sales required to support the electric Customer Choice program and to offset the recognition of the \$19 million of 2004 stranded costs. The MPSC order also resulted in reductions to accrued interest on the 2004 and 2005 PSCR amounts of \$15 million. The MPSC directed Detroit Edison to include the remaining 2004 PSCR over-collection amount and related interest in the 2005 PSCR Reconciliation which is in an under-collected position. The order resulted in a reduction of pre-tax income of approximately \$58 million.

### **Securitization**

Detroit Edison formed The Detroit Edison Securitization Funding LLC (Securitization LLC), a wholly owned subsidiary, for the purpose of securitizing its qualified costs, primarily related to the unamortized investment in the Fermi 2 nuclear power plant. In March 2001, the Securitization LLC issued \$1.75 billion of securitization bonds, and Detroit Edison sold \$1.75 billion of qualified costs to the Securitization LLC. The Securitization LLC is independent of Detroit Edison, as is its ownership of the qualified costs. Due to principles of consolidation, the qualified costs and securitization bonds appear on our Consolidated Statement of Financial Position. We make no claim to these assets. Ownership of such assets has vested in the Securitization LLC and been assigned to the trustee for the securitization bonds. Neither the qualified costs nor funds from an MPSC approved non-bypassable surcharge collected from Detroit Edison's customers for the payment of costs related to the Securitization LLC and securitization bonds are available to Detroit Edison's creditors.

### **Accounting for Costs Related to Enterprise Business Systems (EBS)**

In July 2004, Detroit Edison filed an accounting application with the MPSC requesting authority to capitalize and amortize costs related to EBS, consisting of computer equipment, software and development costs, as well as related training, maintenance and overhead costs. In April 2005, the MPSC approved a settlement agreement providing for the deferral of up to \$60 million of certain EBS costs that would otherwise be expensed, as a regulatory asset for future rate recovery starting January 1, 2006. At December 31, 2006, approximately \$9 million of EBS costs have been deferred as a regulatory asset. In addition, EBS costs recorded as plant assets will be amortized over a 15-year period, pursuant to MPSC authorization.

### **Power Supply Costs Recovery Proceedings**

*2005 Plan Year* - In September 2004, Detroit Edison filed its 2005 PSCR plan case seeking approval of a levelized PSCR factor of 1.82 mills per kWh above the amount included in base rates. In December 2004, Detroit Edison filed revisions to its 2005 PSCR plan case in accordance with the November 2004 MPSC rate order. The revised filing seeks approval of a levelized PSCR factor of up to 0.48 mills per kWh above the new base rates established in the

final electric rate order. Included in the factor were power supply costs, transmission expenses and nitrogen oxide (NOx) emission allowance costs. Detroit Edison self-implemented a factor of negative 2.00 mills per kWh on January 1, 2005. Effective June 1, 2005, Detroit Edison began billing the maximum allowable factor of 0.48 mills per kWh due to increased power supply costs. In September 2005, the MPSC approved Detroit Edison's 2005 PSCR plan case. At December 31, 2005, Detroit Edison has recorded an under-recovery of approximately \$144 million related to the 2005 plan year. In March 2006, Detroit Edison filed its 2005 PSCR reconciliation. The filing sought approval for recovery of approximately \$144 million from its commercial and industrial customers. The filing included a motion for entry of an order to implement immediately a reconciliation surcharge of 4.96 mills per kWh on the bills of its commercial and industrial customers. The under-collected PSCR expense allocated to residential customers could not be recovered due to the PA 141 rate cap for residential customers, which expired January 1, 2006. In addition to the 2005 PSCR Plan Year Reconciliation, the filing included a reconciliation for the Pension Equalization Mechanism (PEM) for the periods from November 24, 2004 through December 31, 2004 and from January 1, 2005 through December 31, 2005. The PEM reconciliation seeks to allocate and refund approximately \$12 million to customers based upon their contributions to pension expense during the subject periods. The September 2006 order in the Company's 2004 PSCR Reconciliation and Stranded Cost proceeding directed the Company to roll the entire 2004 PSCR over-collection amount to the Company's 2005 PSCR Reconciliation, thereby reducing the Company's 2005 PSCR Reconciliation under-collection amount for commercial and industrial customers to \$64 million. An order is expected in the first half of 2007.

*2006 Plan Year* - In September 2005, Detroit Edison filed its 2006 PSCR plan case seeking approval of a levelized PSCR factor of 4.99 mills per kWh above the amount included in base rates for residential customers and 8.29 per kWh above the amount included in base rates for commercial and industrial customers. Included in the factor for all customers are fuel and power supply costs, including transmission expenses, MISO market participation costs, and NOx emission allowance costs. The Company's PSCR Plan includes a matrix which provides for different maximum PSCR factors contingent on varying electric Customer Choice sales levels. The plan also includes \$97 million for recovery of its projected 2005 PSCR under-collection associated with commercial and industrial customers. Additionally, the PSCR plan requests MPSC approval of expense associated with sulfur dioxide emission allowances, mercury emission allowances, and a fuel additive. In conjunction with DTE Energy's sale of its transmission assets to ITC Transmission in February 2003, the FERC froze ITC Transmission's rates through December 2004. In approving the sale, FERC authorized ITC Transmission's recovery of the difference between the revenue it would have collected and the actual revenue collected during the rate freeze period. This amount is estimated to be \$66 million which is to be included in ITC Transmission's rates over a five-year period beginning June 1, 2006. This increased Detroit Edison's transmission expense in 2006 by approximately \$7 million. The MPSC authorized Detroit Edison in 2004 to recover transmission expenses through the PSCR mechanism.

In December 2005, the MPSC issued a temporary order authorizing the Company to begin implementation of maximum quarterly PSCR factors on January 1, 2006. The quarterly factors reflect a downward adjustment in the Company's total power supply costs of approximately 2% to reflect the potential variability in cost projections. The quarterly factors will allow the Company to more closely track the costs of providing electric service to our customers and, because the non-summer factors are well below those ordered for the summer months, effectively delay the higher power supply costs to the summer months at which time our customers will not be experiencing large expenditures for home heating. The MPSC did not adopt the Company's request to recover its projected 2005 PSCR under-collection associated with commercial and industrial customers nor did it adopt the Company's request to implement contingency factors based upon the Company's increased costs associated with providing electric service to returning electric Customer Choice customers. The MPSC deferred both of those Company proposals to the final order on the Company's entire 2006 PSCR Plan. In September 2006, the MPSC issued an order in this case that approved the inclusion of sulfur dioxide emission allowance expense in the PSCR, determined that fuel additive expense should not be included in the PSCR based upon its impact on maintenance expense, found the Company's determination of third party sales revenues to be correct, and allowed the Company to increase its PSCR factor for the balance of the year in an effort to reverse the effects of the previously ordered temporary reduction. The MPSC declined to rule on the Company's requests to include mercury emission allowance expense in the PSCR or its request to include prior PSCR over/(under) recoveries in future year PSCR plans. We have filed a petition for re-hearing. In December 2006, Detroit Edison was granted its request to include its updated projection (\$81 million) of its 2006 PSCR undercollection in its 2007 PSCR plan. In addition, Detroit Edison was granted the authority to include all PSCR over/(under) collections in future PSCR plans, thereby reducing the time between refund or recovery of PSCR reconciliation amounts.

**2007 Plan Year** - In September 2006, Detroit Edison filed its 2007 PSCR plan case seeking approval of a levelized PSCR factor of 6.98 mills per kWh above the amount included in base rates for all PSCR customers. The Company's PSCR plan includes \$130 million for the recovery of its projected 2006 PSCR under-collection, bringing the total requested PSCR factor to 9.73 mills/kWh. The Company's application includes a request for an early hearing and temporary order granting such rate-making authority. The Company's 2007 PSCR Plan includes fuel and power supply costs, including NOx and sulfur dioxide emission allowance costs, transmission costs and MISO costs. The Company filed supplemental testimony and briefs in December 2006 supporting its updated request to include approximately \$81 million for the recovery of its projected 2006 PSCR under-collection. The MPSC issued a temporary order in December 2006 approving the Company's request. The Company will begin to collect its 2007 power supply costs, including the 2006 rollover amount, through a PSCR factor of 8.69 mills/kWh on January 1, 2007.

### Gas Rate Case

On April 28, 2005, the MPSC issued an order for final rate relief. The MPSC determined that the base rate increase granted to

MichCon should be \$61 million annually effective April 29, 2005. This amount is an increase of \$26 million over the \$35 million in interim rate relief approved in September 2004. The rate increase was based on a 50% debt and 50% equity capital structure and an 11% rate of return on common equity.

The MPSC adopted MichCon's proposed tracking mechanism for uncollectible accounts receivable. Each year, MichCon will file an application comparing its actual uncollectible expense to its designated revenue recovery of approximately \$37 million. Ninety percent of the difference will be refunded or surcharged after an annual reconciliation proceeding before the MPSC. The MPSC also approved the deferral of the non-capitalized portion of the negative pension expense. MichCon will record a regulatory liability for any negative pension costs as determined under generally accepted accounting principles. Included as part of the base rate increase, the order provided for \$25 million in rates to recover safety and training costs. There is a one-way tracking mechanism that provides for refunding the portion of the \$25 million not expended on an annual basis.

The MPSC order reduced MichCon's depreciation rates, and the related revenue requirement associated with depreciation expense by \$14.5 million and is designed to have no impact on net income.

The MPSC did not allow the recovery of approximately \$25 million of merger interest costs allocated to MichCon that were incurred by DTE Energy as a result of the acquisition of MCN Energy.

The MPSC order also resulted in the disallowance of computer system and equipment costs and adjustments to environmental regulatory assets and liabilities. The MPSC disallowed recovery of ninety percent of the costs of a computer billing system that was in place prior to DTE Energy's acquisition of MCN Energy in 2001. As a result of the order, MichCon recognized an impairment of this asset of approximately \$42 million in the first quarter of 2005. This impairment had a minimal impact on DTE Energy because a valuation allowance was established for this asset at the time of the MCN acquisition in 2001. The MPSC disallowed approximately \$6 million of certain computer equipment and related depreciation and the recovery of certain internal labor and legal costs related to remediation of MGP sites of approximately \$6 million. The MPSC ordered an additional \$5 million charge due to a change in the allocation of historical MGP sites insurance proceeds.

### Uncollectible Expense Tracker Mechanism and Report of Safety and Training-Related Expenditures

In March 2006, MichCon filed an application with the MPSC for approval of its uncollectible expense tracking mechanism for 2005. This is the first filing MichCon has made under the uncollectible tracking mechanism, which was approved by the MPSC in April 2005 as part of MichCon's last general rate case. MichCon's 2005 base rates included \$37 million for anticipated uncollectible expenses. Actual 2005 uncollectible expenses totaled \$60 million. The tracker mechanism allows MichCon to recover ninety percent of uncollectibles that exceeded that \$37 million base. Under the formula prescribed by the MPSC, MichCon recorded an underrecovery of approximately \$11 million for uncollectible expenses from May 2005 (when the mechanism took effect)

through the end of 2005. In December 2006, the MPSC issued an order authorizing MichCon to implement the Uncollectible Expense True-up Mechanism (UETM) monthly surcharge for service rendered on and after January 1, 2007.

As part of the March 2006 application with the MPSC, MichCon filed a review of the 2005 annual safety and training - related expenditures. MichCon reported that actual safety and training-related expenditures for the initial period exceeded the pro-rata amounts included in base rates and based on the under-recovered position, recommended no refund at this time. In the December 2006 order, the MPSC also approved MichCon's 2005 safety and training report. As of December 31, 2006, MichCon is in a \$3 million over-recovery position for safety and training costs.

### **Gas Cost Recovery Proceedings**

*2004 Plan Year* - In September 2003, MichCon filed its 2004 GCR plan case proposing a maximum GCR factor of \$5.36 per Mcf. MichCon agreed to switch from a calendar year to an operational year as a condition of its settlement in the 2003 GCR plan case. The operational GCR year runs from April to March of the following year. To accomplish the switch, the 2004 GCR plan reflected a 15-month transitional period, January 2004 through March 2005. Under this transition proposal, MichCon filed two reconciliations pertaining to the transition period; one in June 2004 addressing January through March 2004, one filed in June 2005 addressing the remaining April 2004 through March 2005 period and consolidating the two for purposes of the case. The June 2005 filing supported the \$46 million under-recovery with interest MichCon had accrued for the period ending March 31, 2005. In March 2006, MPSC Staff filed testimony recommending an adjustment to the accounting treatment of the injected base gas remaining in the New Haven storage field when it was sold in early 2004 that would result in a \$3 million reduction to MichCon's accrued underrecovery. In June 2006, an MPSC Administrative Law Judge (ALJ) issued a Proposal for Decision (PFD) recommending an approximately \$43 million under-recovery. MichCon recorded the \$3 million reduction to the 2004 underrecovery in the second quarter of 2006. The MPSC issued an order in August 2006 authorizing MichCon to roll a \$42 million net underrecovery, including interest, into its 2005 - 2006 GCR reconciliation. This order disallowed \$0.3 million related to the sale of storage services and concurrent reduction in gas purchases in February and March of 2005. The MPSC also found that the Staff's proposed accounting for the sale of the New Haven injected base gas was appropriate.

*2005-2006 Plan Year* - In December 2004, MichCon filed its 2005-2006 GCR plan case proposing a maximum GCR factor of \$7.99 per Mcf. The plan includes quarterly contingent GCR factors. These contingent factors allow MichCon to increase the maximum GCR factor to compensate for increases in gas market prices, thereby reducing the possibility of a GCR under-recovery. In April 2005, the MPSC issued an order recognizing that Michigan law allows MichCon to self-implement its quarterly contingent factors. MichCon self-implemented quarterly contingent GCR factors of \$8.54 per Mcf in July 2005 and \$10.09 per Mcf in October 2005. In response to market price increases in the fall of 2005, MichCon filed a petition to reopen the record in the case during September 2005. MichCon proposed a revised maximum GCR factor of \$13.10

per Mcf and a revised contingent factor matrix. In October 2005, the MPSC approved an increase in the GCR factor to a cap of \$11.3851 per Mcf for the period November 2005 through March 2006. In June 2006, MichCon filed its GCR reconciliation for the 2005-2006 GCR year. The filing supported a total over-recovery, including interest through March 2006, of \$13 million. MPSC Staff and other interveners filed testimony regarding the reconciliation in December 2006 in which they recommended disallowances related to MichCon's implementation of its dollar cost averaging fixed price program and its use of fixed basis in contracting purchases. In January 2007, MichCon filed testimony rebutting these recommendations. The 2005-2006 GCR plan case is in the early stages of the regulatory review and approval process and the final resolution is uncertain. Based on available information, MichCon is unable to assess the range of a reasonably possible loss related to the proposed disallowances. An MPSC order is expected in 2007.

*2006-2007 Plan Year* - In December 2005, MichCon filed its 2006-2007 GCR plan case proposing a maximum GCR Factor of \$12.15 per Mcf. In July 2006, MichCon and the parties to the case reached a settlement agreement that provides for a maximum GCR factor of \$8.95 per Mcf, plus quarterly contingent GCR factors. These contingent factors will allow MichCon to increase the maximum GCR factor to compensate for increases in gas market prices, thereby reducing the possibility of a GCR under-recovery. The MPSC issued an order approving the settlement in August 2006.

*2007-2008 Plan Year / Native Base Gas Sale Consolidated* - In August 2006, MichCon filed an application with the MPSC requesting permission to sell native base gas that would become accessible with storage facilities upgrades. MichCon's estimated sale of this base gas would be worth \$34 million. In December 2006, the administrative law judge in the case approved a motion made by the Residential Ratepayer Consortium to consolidate this case with MichCon's 2007-2008 GCR plan case. In December 2006, MichCon filed its 2007-2008 GCR plan case proposing a maximum GCR factor of \$8.49 per Mcf. An MPSC Order in the consolidated cases is expected by the end of 2007.

### **Minimum Pension Liability**

At December 31, 2006, we adopted the provisions of SFAS No. 158, *Employers' Accounting for Defined Benefit and Other Postretirement Plans* to recognize the obligations of its pension and postretirement plans. Based on approval received from the MPSC, Detroit Edison recorded the charge to a miscellaneous deferred debit included in regulatory assets in the Consolidated Statement of Financial Position.

### **Other**

We are unable to predict the outcome of the regulatory matters discussed herein. Resolution of these matters is dependent upon future MPSC orders and appeals, which may materially impact the financial position, results of operations and cash flows of the Company.

## NOTE 7 - NUCLEAR OPERATIONS

### General

Fermi 2, our nuclear generating plant, began commercial operation in 1988. Fermi 2 has a design electrical rating (net) of 1,150 megawatts. This plant represents approximately 10% of Detroit Edison's summer net rated capability. The net book balance of the Fermi 2 plant was written off at December 31, 1998, and an equivalent regulatory asset was established. In 2001, the Fermi 2 regulatory asset was securitized. See Note 6. Detroit Edison also owns Fermi 1, a nuclear plant that was shut down in 1972 and is currently being decommissioned. The NRC has jurisdiction over the licensing and operation of Fermi 2 and the decommissioning of Fermi 1.

### Property Insurance

Detroit Edison maintains several different types of property insurance policies specifically for the Fermi 2 plant. These policies cover such items as replacement power and property damage. The Nuclear Electric Insurance Limited (NEIL) is the primary supplier of the insurance policies.

Detroit Edison maintains a policy for extra expenses, including replacement power costs necessitated by Fermi 2's unavailability due to an insured event. These policies have a 12-week waiting period and provide an aggregate \$490 million of coverage over a three-year period.

Detroit Edison has \$500 million in primary coverage and \$2.25 billion of excess coverage for stabilization, decontamination, debris removal, repair and/or replacement of property and decommissioning. The combined coverage limit for total property damage is \$2.75 billion.

For multiple terrorism losses caused by acts of terrorism not covered under the Terrorism Risk Insurance Extension Act of 2005 (TRIA) occurring within one year after the first loss from terrorism, the NEIL policies would make available to all insured entities up to \$3.2 billion, plus any amounts recovered from reinsurance, government indemnity, or other sources to cover losses.

Under the NEIL policies, Detroit Edison could be liable for maximum assessments of up to approximately \$29 million per event if the loss associated with any one event at any nuclear plant in the United States should exceed the accumulated funds available to NEIL.

### Public Liability Insurance

As required by federal law, Detroit Edison maintains \$300 million of public liability insurance for a nuclear incident. For liabilities arising from a terrorist act outside the scope of TRIA, the policy is subject to one industry aggregate limit of \$300 million. Further, under the Price-Anderson Amendments Act of 2005, deferred premium charges up to \$101 million could be levied against each licensed nuclear facility, but not more than \$15 million per year per facility. Thus, deferred premium charges could be levied against all owners of licensed nuclear facilities in the event of a nuclear incident at any of these facilities.

### Decommissioning

Detroit Edison has a legal obligation to decommission its nuclear power plants following the expiration of their operating licenses. This obligation is reflected as an asset retirement obligation, which is classified as a noncurrent regulatory liability. Based on the actual or anticipated extended life of the nuclear plant, decommissioning expenditures for Fermi 2 are expected to be incurred primarily during the period 2025 through 2050. It is estimated that the cost of decommissioning Fermi 2, when its license expires in 2025, will be \$1.2 billion in 2006 dollars and \$3.4 billion in 2025 dollars, using a 6% inflation rate. In 2001, Detroit Edison began the decommissioning of Fermi 1, with the goal of removing the radioactive material and terminating the Fermi 1 license. The decommissioning of Fermi 1 is expected to be complete by 2010.

Detroit Edison currently recovers funds for Fermi 2 decommissioning and the disposal of low-level radioactive waste through a revenue surcharge. The decommissioning of Fermi 1 is funded by Detroit Edison. The amounts recovered from customers are deposited in the restricted external trust accounts to fund decommissioning.

<i>(in Millions)</i>	2006	2005	2004
Revenue	\$ 39	\$ 40	\$ 38
Net unrealized investment gains	42	-	17

The nuclear decommissioning cost will be funded by investments held in trust funds that have been established for each nuclear station as follows:

As of December 31		
<i>(in Millions)</i>	2006	2005
Fermi 2	\$ 694	\$ 601
Fermi 1	15	18
Low level radioactive waste	31	27
Total	\$ 740	\$ 646

At December 31, 2006, investments in the external nuclear decommissioning trust funds consisted of approximately 50% in publicly traded equity securities, 43% in fixed debt instruments and 7% in cash equivalents.

The NRC has jurisdiction over the decommissioning of nuclear power plants and requires decommissioning funding based upon a formula. The MPSC and FERC regulate the recovery of costs of decommissioning nuclear power plants and both require the use of external trust funds to finance the decommissioning of Fermi 2. Rates approved by the MPSC provide for the recovery of decommissioning costs of Fermi 2. Detroit Edison is continuing to fund FERC jurisdictional amounts for decommissioning even though explicit provisions are not included in FERC rates. We believe the MPSC and FERC collections will be adequate to fund the estimated cost of decommissioning using the NRC formula. The decommissioning assets, anticipated earnings thereon and future revenues from decommissioning collections will be used to decommission the nuclear facilities. We expect the regulatory liabilities to be reduced to zero at the conclusion of the decommissioning activities. If amounts remain in the trust funds for these units following the completion of the decommissioning activities, those amounts will be returned to the ratepayers.

A portion of funds recovered through the Fermi 2 decommissioning surcharge and deposited in external trust accounts is designated for the removal of non-radioactive assets and the clean-up of the Fermi site. This removal and clean-up is not considered a legal liability. Therefore, it is not included in the asset retirement obligation, but is included in the nuclear decommissioning regulatory liability.

### Nuclear Fuel Disposal Costs

In accordance with the Federal Nuclear Waste Policy Act of 1982, Detroit Edison has a contract with the U.S. Department of Energy (DOE) for the future storage and disposal of spent nuclear fuel from Fermi 2. Detroit Edison is obligated to pay the DOE a fee of 1 mill per kWh of Fermi 2 electricity generated and sold. The fee is a component of nuclear fuel expense. Delays have occurred in the DOE's program for the acceptance and disposal of spent nuclear fuel at a permanent repository. Until the DOE is able to fulfill its obligation under the contract, Detroit Edison is responsible for the spent nuclear fuel storage. Detroit Edison is currently expanding the Fermi 2 spent fuel pool capacity to meet our storage requirements through 2009. Detroit Edison is a party in the litigation against the DOE for both past and future costs associated with the DOE's failure to accept spent nuclear fuel under the timetable set forth in the Federal Nuclear Waste Policy Act of 1982.

### NOTE 8 - JOINTLY OWNED UTILITY PLANT

Detroit Edison has joint ownership interest in two power plants, Belle River and Ludington Hydroelectric Pumped Storage. Ownership information of the two utility plants as of December 31, 2006 was as follows:

	Belle River	Ludington Hydroelectric Pumped Storage
In-service date	1984-1985	1973
Total plant capacity	1,026 MW	1,872 MW
Ownership interest	*	49 %
Investment (in Millions)	\$ 1,578	\$ 164
Accumulated depreciation (in Millions)	\$ 815	\$ 97

\* Detroit Edison's ownership interest is 63% in Unit No. 1, 81% of the facilities applicable to Belle River used jointly by the Belle River and St. Clair Power Plants and 75% in common facilities used at Unit No. 2.

#### Belle River

The Michigan Public Power Agency (MPPA) has an ownership interest in Belle River Unit No. 1 and other related facilities. The MPPA is entitled to 19% of the total capacity and energy of the plant and is responsible for the same percentage of the plant's operation, maintenance and capital improvement costs.

#### Ludington Hydroelectric Pumped Storage

Consumers Energy Company has an ownership interest in the Ludington Hydroelectric Pumped Storage Plant. Consumers Energy is entitled to 51% of the total capacity and energy of the plant and is responsible for the same percentage of the plant's operation, maintenance and capital improvement costs.

### NOTE 9 - INCOME TAXES

We file a consolidated federal income tax return. Total income tax expense varied from the statutory federal income tax rate for the following reasons:

(Dollars in Millions)	2006	2005	2004
Income before income taxes and minority interest	\$ 324	\$ 498	\$ 428
Less minority interest	(250)	(281)	(212)
Income from continuing operations before tax	\$ 574	\$ 779	\$ 640
Income tax expense at 35% statutory rate	\$ 201	\$ 272	\$ 224
Production tax credits	(35)	(55)	(38)
Investment tax credits	(8)	(8)	(8)
Depreciation	(4)	(4)	(4)
Employee Stock Ownership Plan dividends	(5)	(5)	(5)
Medicare part D subsidy	(6)	(7)	(5)
Other, net	(6)	9	12
Income tax expense (benefit) from continuing operations	\$ 137	\$ 202	\$ 176
Effective federal income tax rate	23.9 %	25.9 %	27.5 %

The minority interest allocation reflects the adjustment to earnings to allocate partnership losses to third party owners. The tax impact of partnership earnings and losses are attributable to the partners instead of the partnerships. The minority interest allocation is therefore removed in computing income taxes associated with continuing operations.

Components of income tax expense were as follows:

(in Millions)	2006	2005	2004
Continuing Operations			
Current federal and other income tax expense	\$ 109	\$ 57	\$ 42
Deferred federal income tax expense (benefit)	28	145	134
	137	202	176
Discontinued operations	(2)	(13)	(15)
Cumulative Effect of Accounting Changes	1	(2)	-
Total	\$ 136	\$ 187	\$ 161

Production tax credits are provided for qualified fuels produced and sold by a taxpayer to an unrelated party during the taxable year. Production tax credits earned but not utilized totaled \$438 million and are carried forward indefinitely as alternative minimum tax credits. The majority of the production tax credits earned, including all of those from our synfuel projects, were generated from projects that have received a private letter ruling (PLR) from the IRS. These PLRs provide assurance as to the appropriateness of using these credits to offset taxable income, however, these tax credits are subject to IRS audit and adjustment.

We have a net operating loss carry-forward of \$90 million that expires in 2020. We do not believe that a valuation allowance is required, as we expect to utilize the loss carry-forward prior to its expiration.

Deferred tax assets and liabilities are recognized for the estimated future tax effect of temporary differences between the tax basis of assets or liabilities and the reported amounts in the financial statements. Deferred tax assets and liabilities are classified as current or noncurrent according to the classification of the related assets or liabilities. Deferred tax assets and liabilities not related to assets or liabilities are classified according to the expected reversal date of the temporary differences.

Deferred tax assets (liabilities) were comprised of the following at December 31:

<i>(in Millions)</i>	2006	2005
Property, plant and equipment	\$ (1,358)	\$ (1,325)
Securitized regulatory assets	(670)	(723)
Alternative minimum tax credit carryforward	438	484
Merger basis differences	60	115
Pension and benefits	16	(2)
Other Comprehensive Income	113	146
Net operating loss	31	56
Other	150	110
	<b>\$ (1,220)</b>	<b>\$ (1,139)</b>
Deferred income tax liabilities	\$ (3,054)	\$ (2,820)
Deferred income tax assets	1,834	1,681
	<b>\$ (1,220)</b>	<b>\$ (1,139)</b>
Current deferred income tax assets	\$ 245	\$ 257
Long-term deferred income tax liabilities	(1,465)	(1,396)
	<b>\$ (1,220)</b>	<b>\$ (1,139)</b>

The above table excludes deferred tax liabilities associated with unamortized investment tax credits which are shown separately on the Consolidated Statement of Financial Position.

In January 2007, we signed an agreement with the IRS acknowledging our acceptance of the results of the 2002 and 2003 audits of our federal income tax returns. We accrue tax and interest related to tax uncertainties that arise due to actual or potential disagreements with governmental agencies about the tax treatment of specific items. At December 31, 2006, the Company had accrued approximately \$32 million for such uncertainties. We believe that our accrued tax liabilities are adequate for all years. See Note 3 for information regarding the planned January 1, 2007 adoption of FIN 48.

## NOTE 10 - COMMON STOCK AND EARNINGS PER SHARE

### Common Stock

In December 2006, we repurchased one million shares of DTE Energy common stock for approximately \$48.5 million.

In August 2005, we successfully remarketed the senior notes comprising part of our Equity Security Units that were issued in June 2002. We also settled the stock purchase contract component of the Equity Security Units by issuing 3.7 million shares of common stock to holders of these units in August 2005 at an issue price of \$46.79. The issue price was calculated by using the average closing price per share of our common stock during a 20 trading-day period ending August 11, 2005.

In March 2004, we issued 4,344,492 shares of DTE Energy common stock, valued at \$170 million. The common stock was contributed to a defined benefit retirement plan.

Under the DTE Energy Company Long-Term Incentive Plan, we grant non-vested stock awards to key employees, primarily management. As a result of a stock award, a settlement of an award of performance shares, or by exercise of a participant's stock option, we may deliver common stock from the Company's authorized but unissued common stock and/or from outstanding common stock acquired by or on behalf of the Company in the name of the participant. The number of non-vested restricted stock awards is included in the number of common shares outstanding; however, for purposes of computing basic earnings per share, non-vested restricted stock awards are excluded.

### Shareholders' Rights Agreement

We have a Shareholders' Rights Agreement designed to maximize shareholder value should DTE Energy be acquired. Under certain triggering events, each right entitles the holder to purchase from DTE Energy one one-hundredth of a share of Series A Junior Participating Preferred Stock of DTE Energy at a price of \$90, subject to adjustment as provided for in the Shareholders' Rights Agreement. The rights expire in October 2007.

### Earnings per Share

We report both basic and diluted earnings per share. Basic earnings per share is computed by dividing income from continuing operations by the weighted average number of common shares outstanding during the period. Diluted earnings per share assumes the issuance of potentially dilutive common shares outstanding during the period and the repurchase of common shares that would have occurred with proceeds from the assumed issuance. Diluted earnings per share assume the exercise of stock options.

A reconciliation of both calculations is presented in the following table:

<i>(in Millions, except per share amounts)</i>	2006	2005	2004
<b>Basic Earnings per Share</b>			
Income from continuing operations	\$ 437	\$ 577	\$ 464
Average number of common shares outstanding	177	175	173
Income per share of common stock based on weighted average number of shares outstanding	\$ 2.46	\$ 3.30	\$ 2.69
<b>Diluted Earnings per Share</b>			
Income from continuing operations	\$ 437	\$ 577	\$ 464
Average number of common shares outstanding	177	175	173
Incremental shares from stock-based awards	1	1	-
Average number of dilutive shares outstanding	178	176	173
Income per share of common stock assuming issuance of incremental shares	\$ 2.45	\$ 3.28	\$ 2.68

Options to purchase approximately 100,000 shares of common stock in 2006, two million shares of common stock in 2005, and one million shares in 2004 were not included in the computation of diluted

earnings per share because the options' exercise price was greater than the average market price of the common shares, thus making these options anti-dilutive.

## NOTE 11 - LONG-TERM DEBT AND PREFERRED SECURITIES

### Long-Term Debt

Our long-term debt outstanding and weighted average interest rates(1) of debt outstanding at December 31 were:

<i>(in Millions)</i>	2006	2005
<b>DTE Energy Debt, Unsecured</b>		
6.6% due 2007 to 2033	\$ 1,669	\$ 1,696
<b>Detroit Edison Taxable Debt, Principally Secured</b>		
5.9% due 2010 to 2037	2,267	2,030
<b>Detroit Edison Tax Exempt Revenue Bonds (2)</b>		
5.2% due 2008 to 2036	1,213	1,145
<b>MichCon Taxable Debt, Principally Secured</b>		
6.2% due 2007 to 2033	745	785
<b>Other Long-Term Debt, Including Non-Recourse Debt</b>	259	155
	6,153	5,811
Less amount due within one year	(235)	(577)
	\$ 5,918	\$ 5,234
<b>Securitization Bonds</b>	\$ 1,295	\$ 1,400
Less amount due within one year	(110)	(105)
	\$ 1,185	\$ 1,295
<b>Equity-Linked Securities</b>	\$ -	\$ 175
<b>Trust Preferred - Linked Securities</b>		
7.8% due 2032	\$ 186	\$ 186
7.5% due 2044	103	103
	\$ 289	\$ 289

(1) Weighted average interest rates as of December 31, 2006 are shown below the description of each debt issue.

(2) Detroit Edison Tax Exempt Revenue Bonds are issued by a public body that loans the proceeds to Detroit Edison on terms substantially mirroring the Revenue Bonds.

### Debt Issuances

In 2006, we issued the following long-term debt:

<i>(in Millions)</i>	Month Issued	Type	Interest Rate	Maturity	Amount
Detroit Edison	May	Senior Notes (1)	6.625%	June 2036	\$ 250
DTE Energy	May	Senior Notes (2)	6.35%	June 2016	300
Detroit Edison	December	Tax-Exempt Revenue Bonds (3)	Variable	December 2036	69
<b>Total Issuances</b>					<b>\$ 619</b>

(1) The proceeds from the issuance were used to repay short-term borrowings of Detroit Edison and for general corporate purposes.

(2) The proceeds from the issuance were used to repay a portion of DTE Energy's 6.45% Senior Notes due 2006 and for general corporate purposes.

(3) The proceeds from the issuance to be used to finance the construction, acquisition, improvement and installation of certain solid waste disposal facilities at Detroit Edison's Monroe Power Plant.

In October 2006, we purchased the lessor interest in the 66 Bcf Washington 10 gas storage field. Prior to the purchase, we leased the storage rights and lease obligations which were recorded as operating leases. The acquisition resulted in a cash payment of approximately \$13 million and the assumption of approximately

\$133 million of project related debt that was recorded on our statement of financial position.

### Debt Retirements and Redemptions

The following debt was retired, through optional redemption or payment at maturity, during 2006.

<i>(in Millions)</i>	Month Retired	Type	Interest Rate	Maturity	Amount
MichCon	May	First Mortgage Bonds	7.15%	May 2006	\$ 40
DTE Energy	June	Senior Notes (1)	6.45%	June 2006	500
EES Coke Battery	December	Senior Notes (2)	9.38%	April 2007	18
<b>Total Retirements</b>					<b>\$ 558</b>

(1) These Senior Notes were paid at maturity with the proceeds from the issuance of Senior Notes by DTE Energy and short-term borrowings.

(2) In addition to its regular payments in 2006, EES Coke Battery Company Senior Notes were paid in full in December.

The following table shows the scheduled debt maturities, excluding any unamortized discount or premium on debt:

<i>(in Millions)</i>	2007	2008	2009	2010	2011	2012 and thereafter	Total
Amount to mature	\$346	\$462	\$368	\$686	\$922	\$4,962	\$7,746

### Remarketable Securities

At December 31, 2006, \$75 million of notes of MichCon were subject to periodic remarketings. We do not expect any remarketings to take place in 2007. We direct the remarketing agents to remarket these securities at the lowest interest rate necessary to produce a par bid. In the event that a remarketing fails, we would be required to purchase the securities.

### Equity-Linked Securities

In June 2002, DTE Energy issued \$173 million of 8.75% Equity Security Units, with each unit consisting of a stock purchase contract and a senior note of DTE Energy. In August 2005, DTE Energy successfully remarketed \$172 million aggregate principal amount of its 5.63% Senior Notes due August 16, 2007 that were originally issued as a component of the 8.75% Equity Security Units. Additionally, in August 2005, DTE Energy settled the stock purchase contract component of its Equity Security Units by issuing common stock to holders of these units. The issue price determined by the average closing price per share of our common stock during a 20 trading-day period ending August 11, 2005 was \$46.79 per share. Settlement of the purchase contracts resulted in DTE Energy issuing approximately 3.7 million shares of common stock in exchange for approximately \$172 million.

### Trust Preferred-Linked Securities

DTE Energy has interests in various unconsolidated trusts that were formed for the sole purpose of issuing preferred securities and lending the gross proceeds to us. The sole assets of the trusts are debt securities of DTE Energy with terms similar to those of the related preferred securities. Payments we make are used by the trusts to make cash distributions on the preferred securities it has issued.

## Personal Property Taxes

Detroit Edison, MichCon and other Michigan utilities have asserted that Michigan's valuation tables result in the substantial overvaluation of utility personal property. Valuation tables established by the Michigan State Tax Commission (STC) are used to determine the taxable value of personal property based on the property's age. In November 1999, the STC approved new valuation tables that more accurately recognize the value of a utility's personal property. The new tables became effective in 2000 and are currently used to calculate property tax expense. However, several local taxing jurisdictions took legal action attempting to prevent the STC from implementing the new valuation tables and continued to prepare assessments based on the superseded tables.

In December 2005, a settlement agreement was reached and executed Stipulations for Consent Judgment, Consent Judgments, and Schedules to Consent Judgment were filed with the Michigan Tax Tribunal on behalf of Detroit Edison, MichCon and a significant number of the largest jurisdictions, in terms of tax dollars, involved in the litigation. The filing of these documents fulfilled the requirements of the settlement agreement and resolves a number of claims by the litigants against each other including both property and non-property issues. The settlement agreement resulted in a pre-tax economic benefit to DTE Energy of \$43 million in 2005 that included the release of a litigation reserve.

## Labor Contracts

There are several bargaining units for our represented employees. Approximately 3,245 of our represented employees are under contracts that expire in June 2007 and 970 employees are under contracts that expire in October 2007. The contracts of the remaining represented employees expire at various dates in 2008 and 2009.

## Other Commitments

Detroit Edison has an Energy Purchase Agreement to purchase steam and electricity from the Greater Detroit Resource Recovery Authority (GDRRA). Under the Agreement, Detroit Edison will purchase steam through 2008 and electricity through June 2024. In 1996, a special charge to income was recorded that included a reserve for steam purchase commitments in excess of replacement costs from 1997 through 2008. The reserve for steam purchase commitments is being amortized to fuel, purchased power and gas expense with non-cash accretion expense being recorded through 2008. We purchased approximately \$42 million of steam and electricity in 2006, 2005 and 2004. We estimate steam and electric purchase commitments through 2024 will not exceed \$386 million. In January 2003, we sold the steam heating business of Detroit Edison to Thermal Ventures II, LP. Due to terms of the sale, Detroit Edison remains contractually obligated to buy steam from GDRRA until 2008 and recorded an additional liability of \$63 million for future commitments. Also, we have guaranteed bank loans that Thermal Ventures II, LP may use for capital improvements to the steam heating system.

In 2004, we modified our future purchase commitments under a transportation agreement with an interstate pipeline company and terminated a related long-term gas exchange (storage) agreement. Under the gas exchange agreement, we received gas from the

customer during the summer injection period and redelivered the gas during the winter heating season. The agreements were at rates that were not reflective of current market conditions and had been fair valued under accounting principles generally accepted in the U.S. In 2002, the fair value of the transportation agreement was frozen when it no longer met the definition of a derivative as a result of FERC Order 637. The fair value amounts were being amortized to income over the life of the related agreements, representing a net liability of approximately \$75 million as of December 31, 2003. As a result of the contract modification and termination, we recorded an adjustment to the net liability increasing 2004 earnings by \$48 million, net of taxes.

As of December 31, 2006, we were party to numerous long-term purchase commitments relating to a variety of goods and services required for our business. These agreements primarily consist of fuel supply commitments and energy trading contracts. We estimate that these commitments will be approximately \$6.5 billion through 2051. We also estimate that 2007 capital expenditures will be \$1.5 billion. We have made certain commitments in connection with expected capital expenditures.

## Bankruptcies

We purchase and sell electricity, gas, coal, coke and other energy products from and to numerous companies operating in the steel, automotive, energy, retail and other industries. Certain of our customers have filed for bankruptcy protection under Chapter 11 of the U.S. Bankruptcy Code. We regularly review contingent matters relating to these customers and our purchase and sale contracts and we record provisions for amounts considered at risk of probable loss. We believe our previously accrued amounts are adequate for probable losses. The final resolution of these matters is not expected to have a material effect on our financial statements.

## Other

Detroit Edison and DTE Coal Services Inc. are involved in a contract dispute with BNSF Railway Company that has been referred to arbitration. Under this contract, BNSF transports western coals east for Detroit Edison and DTE Coal Services. We have filed a breach of contract claim against BNSF for the failure to provide certain services that we believe are required by the contract. The arbitration hearing is scheduled for mid-2007. While we believe we will prevail on the merits in this matter, a negative decision with respect to the significant issues being heard in the arbitration could have an adverse effect on our ability to grow the Coal and Gas Midstream business segment as currently contemplated.

We are involved in certain legal, regulatory, administrative and environmental proceedings before various courts, arbitration panels and governmental agencies concerning claims arising in the ordinary course of business. These proceedings include certain contract disputes, environmental reviews and investigations, audits, inquiries from various regulators, and pending judicial matters. We cannot predict the final disposition of such proceedings. We regularly review legal matters and record provisions for claims that are considered probable of loss. The resolution of pending proceedings is not expected to have a material effect on our operations or financial statements in the period they are resolved.

See Notes 6 and 7 for a discussion of contingencies related to Regulatory Matters and Nuclear Operations.

## NOTE 16 - RETIREMENT BENEFITS AND TRUSTEED ASSETS

### Adoption of SFAS No. 158, Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans

In September 2006, the FASB issued SFAS No. 158, *Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans - an Amendment of FASB Statements No. 87, 88, 106, and 132(R)*. SFAS 158 requires companies to (1) recognize the overfunded or underfunded status of defined benefit pension and defined benefit other postretirement plans in its financial statements, (2) recognize as a component of other comprehensive income, net of tax, the actuarial gains or losses and the prior service costs or credits that arise during the period but are not immediately recognized as components of net periodic benefit cost, (3) recognize adjustments to other comprehensive income when the actuarial gains or losses, prior service costs or credits, and transition assets or obligations are recognized as components of net periodic benefit cost, (4) measure postretirement benefit plan assets and plan obligations as of the date of the employer's statement of financial position, and (5) disclose additional information in the notes to financial statements about certain effects on net periodic benefit cost in the upcoming fiscal year that arise from delayed recognition of the actuarial gains and losses and the prior service cost and credits.

The requirement to recognize the funded status of a postretirement benefit plan and the related disclosure requirements is effective for fiscal years ending after December 15, 2006. We adopted this requirement as of December 31, 2006. The requirement to measure plan assets and benefit obligations as of the date of the employer's fiscal year-end statement of financial position is effective for fiscal years ending after December 15, 2008. We plan to adopt this requirement as of December 31, 2008.

Detroit Edison received approval from the MPSC to record the charge related to the additional liability as a miscellaneous deferred debit in the regulatory asset line on the Consolidated Statement of Financial Position since the traditional rate setting process allows for the recovery of pension and other postretirement plan costs. Retrospective application of the changes required by SFAS No. 158 is prohibited; therefore certain disclosures below are not comparable.

### Measurement Date

In the fourth quarter of 2004, we changed the date for actuarial measurement of our obligations for benefit programs from December 31 to November 30. We believe the one-month change of the measurement date is a preferable change as it allows time for management to plan and execute its review of the completeness and accuracy of its benefit programs results and to fully reflect the impact on its financial results. The change did not have a material effect on retained earnings as of January 1, 2004, and income from continuing operations, net income and related per share amounts for any interim period in 2004. Accordingly, all amounts reported in the following tables for balances as of December 31, 2006 and December 31, 2005 are based on measurement dates of November 30, 2006 and November 30, 2005, respectively. Amounts reported in tables for the year ended December 31, 2006 are based on a measurement date of November 30, 2005. Amounts reported in tables for the year ended December 31, 2005 are based on a measurement date of November 30, 2004. Amounts reported in tables for the year ended December 31, 2004 are based on a measurement date of December 31, 2003.

### Qualified and Nonqualified Pension Plan Benefits

We have qualified defined benefit retirement plans for eligible represented and nonrepresented employees. The plans are noncontributory and cover substantially all employees. The plans provide traditional retirement benefits based on the employees' years of benefit service, average final compensation and age at retirement. In addition, certain represented and nonrepresented employees are covered under cash balance provisions that base benefits on annual employer contributions and interest credits. We also maintain supplemental nonqualified, noncontributory, retirement benefit plans for selected management employees. These plans provide for benefits that supplement those provided by DTE Energy's other retirement plans.

Our policy is to fund qualified pension costs by contributing amounts consistent with the Pension Protection Act of 2006 provisions and additional amounts when we deem appropriate. In December 2006, we contributed \$180 million to the qualified pension plans and \$15 million to the nonqualified pension plans. We anticipate making up to a \$180 million contribution to our qualified pension plans in 2007 and a \$15 million contribution to our nonqualified pension plans in 2007.

Net pension cost includes the following components:

(in Millions)	Qualified Pension Plans			Nonqualified Pension Plans		
	2006	2005	2004	2006	2005	2004
Service Cost	\$ 62	\$ 64	\$ 58	\$ 2	\$ 2	\$ 2
Interest Cost	172	169	168	4	3	3
Expected Return on Plan Assets	(222)	(218)	(216)	-	-	-
Amortization of						
Net actuarial loss	57	67	63	2	1	1
Prior service cost	7	8	8	1	-	-
Special Termination Benefits	49	-	-	-	-	-
Net Pension Cost	\$ 125	\$ 90	\$ 81	\$ 9	\$ 6	\$ 6

Amounts in accumulated other comprehensive loss and regulatory assets expected to be recognized as components of net periodic benefit cost during 2007 are comprised of \$56 million of net actuarial loss and \$5 million of prior service cost relating to qualified pension plans and \$2 million of net actuarial loss and \$1 million of prior service cost relating to nonqualified pension plans.

We recorded a \$49 million pension cost associated with our Performance Excellence Process in 2006.

The following table reconciles the obligations, assets and funded status of the plans as well as the amounts recognized as prepaid pension cost or pension liability in the Consolidated Statement of Financial Position at December 31:

(in Millions)	Qualified Pension Plans		Nonqualified Pension Plans	
	2006	2005	2006	2005
Accumulated Benefit Obligation-End of Period	\$ 2,934	\$ 2,741	\$ 73	\$ 61
Projected Benefit Obligation-Beginning of Period	\$ 3,013	\$ 2,899	\$ 67	\$ 56
Service Cost	62	64	2	2
Interest Cost	172	169	4	3
Actuarial Loss	78	49	7	10
Benefits Paid	(197)	(168)	(5)	(4)
Special Termination Benefits	49	-	-	-

Prior service (credit) (b)	(10)		-	
Regulatory Assets (b)				
Net Actuarial loss (b)	\$ 756		\$ 21	
Prior service cost (b)	24		1	

(a)- Disclosure no longer required by FAS 158, adopted in 2006, retroactive adoption not permitted.

(b) - New disclosure required by FAS 158, adopted in 2006, retroactive adoption not permitted.

Assumptions used in determining the projected benefit obligation and net pension costs are listed below:

	2006	2005	2004
<b>Projected Benefit Obligation</b>			
Discount rate	5.70 %	5.90 %	6.00 %
Annual increase in future compensation levels	4.0 %	4.0 %	4.0 %
<b>Net Pension Costs</b>			
Discount rate	5.90 %	6.00 %	6.25 %
Annual increase in future compensation levels	4.0 %	4.0 %	4.0 %
Expected long-term rate of return on Plan assets	8.75 %	9.0 %	9.0 %

At December 31, 2006, the benefits related to our qualified and nonqualified plans expected to be paid in each of the next five years and in the aggregate for the five fiscal years thereafter are as follows:

<i>(in Millions)</i>	
2007	\$ 179
2008	183
2009	190
2010	199
2011	204
2012 - 2016	1,157
<b>Total</b>	<b>\$ 2,112</b>

We employ a consistent formal process in determining the long-term rate of return for various asset classes. We evaluate input from our consultants, including their review of historic financial market risks and returns and long-term historic relationships between the asset classes of equities, fixed income and other assets, consistent with the widely accepted capital market principle that asset classes with higher volatility generate a greater return over the long-term. Current market factors such as inflation, interest rates, asset class risks and asset class returns are evaluated and considered before long-term capital market assumptions are determined. The long-term portfolio return is also established employing a consistent formal process, with due consideration of diversification, active investment management and rebalancing. Peer data is reviewed to check for reasonableness.

We employ a total return investment approach whereby a mix of equities, fixed income and other investments are used to maximize the long-term return on plan assets consistent with prudent levels of risk. The intent of this strategy is to minimize plan expenses over the long-term. Risk tolerance is established through consideration of future plan cash flows, plan funded status, and corporate financial considerations. The investment portfolio contains a diversified blend of equity, fixed income and other investments. Furthermore, equity investments are diversified across U.S. and non-U.S. stocks, growth and value investment styles, and large and small market capitalizations. Other assets such as private equity and absolute return funds are used judiciously to enhance long-term returns while improving portfolio diversification. Derivatives may be utilized in a risk controlled manner, to potentially increase the portfolio beyond the market value of invested assets and reduce portfolio investment risk.

Investment risk is measured and monitored on an ongoing basis through annual liability measurements, periodic asset/liability studies, and quarterly investment portfolio reviews.

Our plans' weighted-average asset allocations by asset category at December 31 were as follows:

	2006	2005
Equity Securities	68 %	68 %
Debt Securities	23	27
Other	9	5
	<b>100 %</b>	<b>100 %</b>

Our plans' weighted-average asset target allocations by asset category at December 31, 2006 were as follows:

Equity Securities	65 %
Debt Securities	20
Other	15
	<b>100 %</b>

We also sponsor defined contribution retirement savings plans. Participation in one of these plans is available to substantially all represented and nonrepresented employees. We match employee contributions up to certain predefined limits based upon eligible compensation, the employee's contribution rate and, in some cases, years of credited service. The cost of these plans was \$29 million in 2006, \$29 million in 2005, and \$28 million in 2004.

## Other Postretirement Benefits

We provide certain postretirement health care and life insurance benefits for employees who are eligible for these benefits. Our policy is to fund certain trusts to meet our postretirement benefit obligations. Separate qualified Voluntary Employees Beneficiary Association (VEBA) trusts exist for represented and nonrepresented employees. In 2006, we made cash contributions of \$116 million to our postretirement benefit plans. At the discretion of management, we may make up to a \$116 million contribution to our VEBA trusts in 2007.

Net postretirement cost includes the following components:

<i>(in Millions)</i>	2006	2005	2004
Service Cost	\$ 59	\$ 55	\$ 41
Interest Cost	115	105	92
Expected Return on Plan Assets	(61)	(70)	(56)
Amortization of			
Net loss	72	60	43
Prior service (credit)	(3)	(2)	(3)
Net transition obligation	7	7	8
Special Termination Benefits	8	-	-
<b>Net Postretirement Cost</b>	<b>\$ 197</b>	<b>\$ 155</b>	<b>\$ 125</b>

Amounts in accumulated other comprehensive loss or regulatory assets expected to be recognized as components of net periodic benefit cost during 2007 are comprised of \$66 million of net actuarial loss, \$2 million gain of prior service cost and \$7 million of net transition obligation. We recorded an \$8 million postretirement benefit cost associated with our Performance Excellence Process in 2006.

The following table reconciles the obligations, assets and funded status of the plans including amounts recorded as accrued postretirement cost in the Consolidated Statement of Financial Position at December 31:

<i>(in Millions)</i>	2006	2005
Accumulated Postretirement		
Benefit Obligation-Beginning of Period	\$ 1,991	\$ 1,793
Service Cost	59	55
Interest Cost	115	105
Actuarial Loss	101	136
Plan Amendments	2	(10)
Medicare Part D Subsidy	1	-
Special Termination Benefits	8	-
Benefits Paid	(93)	(88)
Accumulated Postretirement Benefit		
Obligation-End of Period	\$ 2,184	\$ 1,991
Plan Assets at Fair Value-Beginning of Period	\$ 713	\$ 679
Actual Return on Plan Assets	86	61
Company Contributions	60	40
Benefits Paid	(65)	(67)
Plan Assets at Fair Value-End of Period	\$ 794	\$ 713
Funded Status of the Plans	\$ (1,390)	\$ (1,278)
December Adjustment	(24)	(58)
Funded Status, as of December 31	\$ (1,414)	\$ (1,336)
Unrecognized (a)		
Net Actuarial loss (a)		896

Net transition obligation (a)		46
Liability-End of Period (a)		\$ (406)
Noncurrent Assets (b)	\$ -	
Current Liabilities (b)	\$ -	
Noncurrent Liabilities (b)	\$ (1,414)	

Amounts Recognized in  
Accumulated other comprehensive  
loss, pre-tax (b)

Net Actuarial loss (b)	\$ 85
Prior service (credit) (b)	\$ (44)
Net transition obligation (b)	\$ (35)
Regulatory Assets (b)	
Net Actuarial loss (b)	\$ 816
Prior service cost (b)	\$ 36
Net transition obligation (b)	\$ 74

(a) Disclosure no longer required by FAS 158, adopted in 2006, retroactive adoption not permitted.

(b) New disclosure required by FAS 158, adopted in 2006, retroactive adoption not permitted.

Assumptions used in determining the projected benefit obligation and net benefit costs are listed below:

	2006	2005	2004
Projected Benefit Obligation			
Discount rate	5.70 %	5.90 %	6.00 %
Net Benefit Costs			
Discount rate	5.90 %	6.00 %	6.25 %
Expected long-term rate of return on Plan assets	8.75 %	9.00 %	9.00 %

Benefit costs were calculated assuming health care cost trend rates beginning at 9% for 2006 and decreasing to 5% in 2011 and thereafter for persons under age 65 and decreasing from 8% to 5% for persons age 65 and over. A one-percentage-point increase in health care cost trend rates would have increased the total service cost and interest cost components of benefit costs by \$30 million and increased the accumulated benefit obligation by \$272 million at December 31, 2006. A one-percentage-point decrease in the health care cost trend rates would have decreased the total service and interest cost components of benefit costs by \$25 million and would have decreased the accumulated benefit obligation by \$230 million at December 31, 2006.

At December 31, 2006, the benefits expected to be paid, including prescription drug benefits, in each of the next five years and in the aggregate for the five fiscal years thereafter are as follows:

<i>(in Millions)</i>	
2007	\$ 122
2008	127
2009	131
2010	135
2011	139
2012 - 2016	726
Total	\$ 1,380

In December 2003, the Medicare Act was signed into law which provides for a non-taxable federal subsidy to sponsors of retiree health care benefit plans that provide a benefit that is at least "actuarially equivalent" to the benefit established by law. As discussed in Note 3, we adopted FSP No. 106-2 in 2004, which provides guidance on the accounting for the Medicare Act. As a result of the adoption, our accumulated postretirement benefit obligation for the subsidy related to benefits attributed to past service was reduced by approximately \$95 million at January 1, 2004 and was accounted for as an actuarial gain. The effects of the subsidy reduced net periodic postretirement benefit costs by \$17 million in 2006, \$20 million in 2005 and \$16 million in 2004.

At December 31, 2006, the gross amount of federal subsidies expected to be received in each of the next five years and in the aggregate for the five fiscal years thereafter was as follows:

<i>(in Millions)</i>	
2007	\$ 5
2008	5
2009	5
2010	7
2011	7
2012 - 2016	35
Total	\$ 64

The process used in determining the long-term rate of return for assets and the investment approach for our other postretirement benefits plans is similar to those previously described for our qualified pension plans.

Our plans' weighted-average asset allocations by asset category at December 31 were as follows:

	2006	2005
Equity Securities	68 %	68 %
Debt Securities	25	28
Other	7	4
	100 %	100 %

Our plans' weighted-average asset target allocations by asset category at December 31, 2006 were as follows:

Equity Securities	65 %
Debt Securities	20
Other	15
	100 %

The adoption of SFAS No. 158 had the following incremental effect on the financial statement line items shown below:

(in Millions)

	Qualified Plans	Non-Qualified Plans	Post-retirement Plans	Total Benefit Plans
Increase (Decrease) in Assets and Liabilities				
Prepaid pension assets	\$ (180)	\$ -	\$ -	\$ (180)
Accrued pension liability	\$ 133	\$ 3	\$ -	\$ 136
Accrued postretirement liability	\$ -	\$ -	\$ 933	\$ 933
Intangible assets	\$ (17)	\$ (1)	\$ -	\$ (18)
Deferred income taxes asset	\$ 19	\$ -	\$ 2	\$ 21
Regulatory assets	\$ 277	\$ 4	\$ 927	\$ 1,208
Accumulated other comprehensive loss	\$ 34	\$ -	\$ 4	\$ 38

## Grantor Trust

MichCon maintains a Grantor Trust that invests in life insurance contracts and income securities. Employees and retirees have no right, title or interest in the assets of the Grantor Trust, and MichCon can revoke the trust subject to providing the MPSC with prior notification. We account for our investment at fair value with unrealized gains and losses recorded to earnings.

## NOTE 17 - STOCK-BASED COMPENSATION

The DTE Energy Stock Incentive Plan permits the grant of incentive stock options, non-qualifying stock options, stock awards, performance shares and performance units. Participants in the plan include our employees and members of our Board of Directors. In the second quarter of 2006, we adopted a new Long-Term Incentive Program (LTIP).

The following are the key points of the newly adopted LTIP:

- Authorized limit is 9,000,000 shares of common stock;
- Prohibits the grant of a stock option with an exercise price that is less than the fair market value of the Company's stock on the date of the grant; and
- Imposes the following award limits to a single participant in a single calendar year, (1) options for more than 500,000 shares of common stock; (2) stock awards for more than 150,000 shares of common stock; (3) performance share awards for more than 300,000 shares of common stock (based on the maximum payout under the award); or (4) more than 1,000,000 performance units, which have a face amount of \$1.00 each.

As of December 31, 2006, no performance units have been granted under either the LTIP or the previous stock incentive plan.

Effective January 1, 2006, we adopted SFAS No. 123(R), *Share-Based Payment*, using the modified prospective transition method. Under this method, we record compensation expense at fair value over the vesting period for all awards we grant after the date we adopted the standard. In addition, we are required to record compensation expense at fair value (as previous awards continue to vest) for the unvested portion of previously granted stock option awards that were outstanding as of the date of adoption. Pre-adoption awards of stock awards and performance shares will continue to be expensed. DTE did not make the one-time election to adopt the alternative transition method described in FSP SFAS 123(R)-3, *Transition Election Related to Accounting for the Tax Effect of Share-Based Payment Awards*, but has chosen instead to follow the original guidance provided by SFAS 123(R) in accounting for the tax effects of stock based compensation awards.

The adoption of SFAS 123(R) in 2006 resulted in the following:

- Income from continuing operations was reduced by \$2 million;
- Net income was reduced by \$1 million;
- Operating and financing cash flows were not materially impacted; and
- Had no material effect on basic or diluted earnings per share.

Stock-based compensation for the reporting periods is as follows:

(in Millions)	2006	2005	2004
Stock-based compensation expense	\$ 24	\$ 13	\$ 12
Tax benefit of compensation expense	\$ 8	\$ 5	\$ 4

The cumulative effect of the adoption of SFAS 123(R) was an increase in net income of \$1 million as a result of estimating forfeitures for previously granted stock awards and performance shares. We have not restated any prior periods as a result of the adoption of SFAS 123(R). We generally purchase shares on the open market for options that are exercised or we may settle in cash other stock based compensation.

## Options

Options are exercisable according to the terms of the individual stock option award agreements and expire 10 years after the date of the grant. The option exercise price equals the fair value of the stock on the date that the option was granted.

Stock option activity was as follows:

	Number of Options	Weighted Average Exercise Price	(in Millions) Aggregate Intrinsic Value
Options outstanding at January 1, 2006	6,236,343	\$ 41.31	
Granted	621,720	\$ 43.39	
Exercised	(1,009,126)	\$ 40.63	
Forfeited or Expired	(181,740)	\$ 43.20	
Options outstanding at December 31, 2006	<u>5,667,197</u>	\$ 41.60	\$ 26
Options exercisable at December 31, 2006	<u>4,104,375</u>	\$ 41.09	\$ 21

(1) The weighted average remaining contractual life for the exercisable shares is 5.25 years.

(2) As of December 31, 2006 1,562,822 options were nonvested.

(3) During 2006 1,169,744 options vested in this period.

The weighted average grant date fair value of options granted during 2006, 2005 and 2004 was \$6.12, \$5.89 and \$4.46, respectively. The intrinsic value of options exercised for the years ended December 31, 2006, 2005 and 2004 was \$6 million, \$8 million, and \$7 million, respectively. Total option expense recognized during 2006 was \$6 million.

The number, weighted average exercise price and weighted average remaining contractual life of options outstanding were as follows:

Range of Exercise Prices	Number of Options	Weighted Average Exercise Price	Weighted Average Remaining Contractual Life (Years)
\$ 27.62 - \$ 38.04	337,395	\$ 31.09	2.90
\$ 38.60 - \$ 42.44	2,961,657	\$ 40.63	5.79
\$ 42.60 - \$ 44.50	948,390	\$ 43.13	7.39
\$ 44.56 - \$ 48.00	1,419,755	\$ 45.08	6.59
	<u>5,667,197</u>	\$ 41.60	6.09

We determine the fair value for these options at the date of grant using a Black-Scholes based option pricing model and the following assumptions:

	December 31 2006	December 31 2005	December 31 2004
Risk-free interest rate	4.58 %	3.93 %	3.55 %
Dividend yield	4.75 %	4.60 %	5.23 %
Expected volatility	19.79 %	19.56 %	20.00 %
Expected life	6 years	6 years	6 years

In connection with the adoption of SFAS 123(R) we reviewed and updated our forfeiture, expected term and volatility assumptions. We modified option volatility to include both historical and implied share-price volatility. Implied volatility is derived from exchange traded options on DTE Energy common stock. Volatility for 2006 was estimated based solely upon historical share-price volatility. Our expected term is based on industry standards.

Pro forma information for the periods ended December 31, 2005

and 2004 is provided to show what our net income and earnings per share would have been if compensation costs had been determined as prescribed by SFAS 123(R):

	December 31 2005	December 31 2004
<i>(in Millions, except per share amounts)</i>		
Net Income As Reported	\$ 537	\$ 431
Less: Total stock-based expense	(4)	(6)
Pro Forma Net Income	\$ 533	\$ 425
Earnings per share		
Basic - as reported	\$ 3.07	\$ 2.50
Basic - pro forma	\$ 3.05	\$ 2.46
Diluted - as reported	\$ 3.05	\$ 2.49
Diluted - pro forma	\$ 3.03	\$ 2.45

## Stock Awards

Stock awards granted under the plan are restricted for varying periods, which are generally for three years. Participants have all rights of a shareholder with respect to a stock award, including the right to receive dividends and vote the shares. Prior to vesting in stock awards, the participant: (i) may not sell, transfer, pledge, exchange or otherwise dispose of shares; (ii) shall not retain custody of the share certificates; and (iii) will deliver to us a stock power with respect to each stock award.

The stock awards are recorded at cost that approximates fair value on the date of grant. We account for stock awards as unearned compensation, which is recorded as a reduction to common stock. The cost is amortized to compensation expense over the vesting period.

Stock award activity for the periods ended December 31 was:

	2006	2005	2004
Fair value of awards vested (in Millions)	\$ 5	\$ 4	\$ 6
Restricted common shares awarded	282,555	288,360	209,650
Weighted average market price of shares awarded	\$ 43.64	\$ 44.95	\$ 39.95
Compensation cost charged against income (in Millions)	\$ 10	\$ 8	\$ 6

The following table summarizes our stock awards activity for the period ended December 31, 2006:

	Restricted Stock	Weighted Average Grant Date Fair Value
Balance at December 31, 2005	544,087	\$ 42.68
Grants	282,555	\$ 43.64
Forfeitures	(45,561)	\$ 43.03
Vested	(114,945)	\$ 41.86
Balance at December 31, 2006	<u>666,136</u>	\$43.20

## Performance Share Awards

Performance shares awarded under the plan are for a specified number of shares of common stock that entitles the holder to receive a cash payment, shares of common stock or a combination

thereof. The final value of the award is determined by the achievement of certain performance objectives and market conditions. The awards vest at the end of a specified period, usually three years. We account for performance share awards by accruing compensation expense over the vesting period based on: (i) the number of shares expected to be paid which is based on the probable achievement of performance objectives; and (ii) the fair value of the shares.

We recorded compensation expense as follows:

<i>(in Millions)</i>	2006	2005	2004
Compensation expense	\$ 8	\$ 5	\$ 6
Cash settlements (1)	\$ 4	\$ 5	\$ 6

(1) approximates the intrinsic value of the liability.

During the vesting period, the recipient of a performance share award has no shareholder rights. However, recipients will be paid an amount equal to the dividend equivalent on such shares. Performance share awards are nontransferable and are subject to risk of forfeiture. As of December 31, 2006, there were 1,035,696 performance share awards outstanding.

The following table summarizes our performance share activity for the period ended December 31, 2006:

	Performance Shares
Balance at December 31, 2005	803,071
Grants	520,395
Forfeitures	(132,545)
Payouts	(155,225)
Balance at December 31, 2006	1,035,696

## Unrecognized Compensation Costs

As of December 31, 2006, there was \$26 million of total unrecognized compensation cost related to non-vested stock incentive plan arrangements. That cost is expected to be recognized over a weighted-average period of 1.35 years.

Type	(In Millions) Unrecognized Compensation Cost	(in years) Weighted Average to be Recognized
Stock Awards	\$ 11	1.19
Performance Shares	11	1.56
Options	4	1.26
	<u>\$ 26</u>	1.35

The tax benefit realized for tax deductions related to our stock incentive plan totaled \$8 million for the period ended December 31, 2006. Approximately \$1.6 million of compensation cost was capitalized as a part of fixed assets during 2006.

## NOTE 18 - SEGMENT AND RELATED INFORMATION

In the third quarter of 2006, we realigned the non-utility segment Power and Industrial Projects business unit to separately present the Synthetic Fuel business. The impending expiration of synfuel tax credits as of December 31, 2007, combined with the sustained

volatility of oil prices, increased management focus on synfuels, thereby requiring a separate business segment. In the fourth quarter of 2006, we separated the Fuel Transportation and Marketing segment into Coal and Gas Midstream, and Energy Trading corresponding to additional management focus on the results of these non-utility segments. Based on the following structure, we set strategic goals, allocate resources and evaluate performance:

### Electric Utility

- Consists of Detroit Edison, the company's electric utility whose operations include the power generation and electric distribution facilities that service approximately 2.2 million residential, commercial and industrial customers throughout southeastern Michigan.

### Gas Utility

- Consists of the gas distribution services provided by MichCon, a gas utility that purchases, stores and distributes natural gas throughout Michigan to approximately 1.3 million residential, commercial and industrial customers and Citizens Gas Fuel Company, a gas utility that distributes natural gas in Adrian, Michigan.

### Non-Utility Operations

- *Coal and Gas Midstream*, primarily consisting of coal transportation and marketing, and gas pipelines, processing and storage;
- *Unconventional Gas Production*, primarily consisting of unconventional gas project development and production;
- *Power and Industrial Projects*, primarily consisting of on-site energy services, steel-related projects and power generation with services;
- *Energy Trading*, primarily consisting of energy marketing and trading operations; and
- *Synthetic Fuel*, consisting of the operations of nine synfuel plants.

*Corporate & Other*, primarily consisting of corporate staff functions and certain energy related investments.

Prior year segment information has been reclassified to conform to the current year's segment structure.

The income tax provisions or benefits of DTE Energy's subsidiaries are determined on an individual company basis and recognize the tax benefit of production tax credits and net operating losses. The subsidiaries record income tax payable to or receivable from DTE Energy resulting from the inclusion of its taxable income or loss in DTE Energy's consolidated federal tax return.

Inter-segment billing for goods and services exchanged between segments is based upon tariffed or market-based prices of the provider and primarily consists of power sales, gas sales and coal transportation services in the following segments:

<i>(in Millions)</i>	2006	2005	2004
Electric Utility	\$ 59	\$ 207	\$ 218
Coal and Gas Midstream	180	152	180
Unconventional Gas Production	134	154	121
Energy Trading	75	116	73
	<u>\$ 448</u>	<u>\$ 629</u>	<u>\$ 592</u>

Financial data of the business segments follows:

(in Millions)

2006	Operating Revenue	Depreciation, Depletion & Amortization	Interest Income	Interest Expense	Income Taxes	Net Income	Total Assets	Goodwill	Capital Expenditures

## NOTE 19 - SUPPLEMENTARY QUARTERLY FINANCIAL INFORMATION (UNAUDITED)

Quarterly earnings per share may not total for the years, since quarterly computations are based on weighted average common shares outstanding during each quarter. Georgetown was reported as a discontinued operation beginning in the fourth quarter 2006, resulting in the adjustment of prior quarterly results. See Note 4.

## Glossary of Terms

<b>Biomass</b>	Energy plant material, vegetation, or waste used as a fuel or energy source.
<b>Current Ratio</b>	The ratio of total current assets for the most recent fiscal year divided by total current liabilities for the same period.
<b>Coke</b>	Coke is combined with iron ore to create a high metallic iron that is used to produce steel. A series of coke ovens configured in a module is referred to as a battery.
<b>Debt to Equity Ratio</b>	Is total debt for the most recent fiscal year divided by total shareholder equity for the same period and is expressed as a percentage.
<b>Dividend Rate</b>	The total of the expected dividend payments over the next 12 months. It is generally the most recent cash dividend declared multiplied by the dividend payment frequency, plus any recurring extra dividends.
<b>Landfill Gas</b>	A byproduct of solid waste decomposition. The gas is composed of approximately equal proportions of methane and carbon dioxide.
<b>Renewable Energy</b>	Power created from wind, sun, water, biomass or other environmentally-friendly sources.
<b>Revenue</b>	The sum of all sales reported for all operating divisions.
<b>Synthetic Fuel</b>	The fuel produced through a process involving chemically modifying and binding particles of coal. Synfuel is used for power generation and industrial coke production. Synfuel production generates production tax credits.
<b>Unconventional Gas</b>	Oil and gas deposits that originated and are stored in coalbed, tight sandstone and shale formations.

## Other Information About DTE Energy

DTE Energy common stock is listed on the New York Stock Exchange (symbol DTE). The following table indicates the reported high and low sale prices on the New York Stock Exchange Composite Tape for DTE Energy common stock and dividends paid per share for each quarterly period during the past two years:

Calendar	Quarter	High	Low	Dividends Paid
				Per Share
2006	First	\$ 44.23	\$ 40.00	\$ 0.515
	Second	41.91	38.77	0.515
	Third	43.63	40.26	0.515
